RADIO LAW: COMMISSION REQUIRES RADAR DETECTORS TO COMPLY WITH EMISSION LIMITS

The FCC has imposed new emission limits and certification requirements on radar detectors. This, to prevent them from causing interference to very small aperture satellite terminals that operate with downlink frequencies in the 11.7 to 12.2 GHz band. Tests at the Commission's Laboratory have shown that some radar detectors emit radio signals in the downlink band far in excess of the limits that apply to other unintentional radiators. As a result of the new standards, radar detectors sold in the United States will have to meet the new and more stringent limits. The complete document is at

http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-224518A1.doc (CGC Communicator)

**

RADIO LAW: VOTE ON NEW FCC COMMISSIONER EXPECTED

Ending months of political bickering over judicial nominations, a senate panel approved a longtime aide to Senate Majority Leader Tom Daschle for a seat on the Federal Communications Commission. The nomination of Jonathan S. Adelstein, who has worked for the Democratic leader since 1995, will go to the full Senate for a vote.

Approval is expected, with several Republican senators saying they would vote for the South Dakota native. The FCC panel has five commissioners, who are nominated by the president and confirmed by the Senate. Only three can be from the same political party. (Congressional Review)

**

ENFORCEMENT: WISCONSIN HAM ASKED ABOUT CB SALES

The FCC has asked a Wisconsin ham to explain his connection to a website that purportedly offers for sale C-B equipment not certified by the agency. The FCC's Riley Hollingsworth explains:

--
Hollingsworth: "We opened an inquirey regarding the marketing of non certified radio equipment including non certified CB transceivers and HF linear amplifiers by Roper Electronics. Roper Electronics has a web page entitled tomah.com, and we are inquiring into the relationship between Roper Electronics and Randi Owen, N9UOM, of Tomah Wisconsin."
--

Specifically, Owen was asked to fully describe his relationship, if any, with Roper Electronics. Also, if it turns out that he owns or is affiliated with Roper, he was requested to furnish the FCC a listing of all models of HF transceivers and amplifiers domestically sold and/or offered for sale by Roper since January 1st of this year. That list must include the FCC certification number for each model.

The letter of inquiry went out to Owen on June 18th. Hollingsworth says that a reply to that inquiry is do in right now. (FCC, RAIN)

HAM SCHOLARSHIPS: FAR SCHOLARSHIP WINNERS ANNOUNCED

The Foundation For amateur Radio has announced this year's winners for the fifty-seven scholarships which it administers. The names of the recipients for the individual awards appear on a list at several websites including the ARRL. For more information, write FAR Scholarships, PO Box 831, Riverdale, Maryland, 20783. The announcement for the year 2003 awards availability will be made early next year. (FAR)

**

UPCOMING EVENTS: PACKARD AUTOMOBILE CELEBRATION

On the special events calendar, the Warren Ohio Amateur Radio Association will be operating special events station W8P to commemorate the annual Packard automobile celebration and car show. The Warren group will operate on the 40, 20, 15 and 10 meter bands. QSL's go to the Warren Amateur Radio Association, Post Office Box 809, Warren Ohio. The Zipcode there is 44482 (Via Internet Posting)

**

UPCOMING EVENTS: OH-KY-IN HAMFEST

Still in Ohio, but over in Cincinnati, the OH-KY-IN Amateur Radio Society will be holding its annual hamfest on July 27th. The venue is the Diamond Oaks Career Development Campus and this event features seminars, hidden transmitter hunts and a giant flea market. More information on this one is on the web at www dot ohkyin dot org. And in case you are wondering what OH-KY-IN stands for – its Ohio, Kentucky and Indiana – the three states that provide most of the attendees to this annual event. (Via E-Mail)

**

UPCOMING EVENTS: NATIONAL BABY FOOD FESTIVAL

>From one of our listeners in Michigan comes word that W1B is a special event operation from the National Baby Food Festival. Yes, there really is a National Baby Food Festival and W1B will operate the General class areas of 75, 40, 20, 15 and 10 meters while its underway. And if you work this one, you QSL with a self addressed stamped envelope to Shawn Gibson, KC8LGD, 3377 West 80th Street in Newaygo Michigan. Gibson’s zipcode is 49337. (Via Internet Posting)

HAM RADIO IN SPACE: RUSSIA SAYS BASS LIKELY TO FLY TO ISS

The Russian space company Rosaviakosmos has announced that N*SYNC singer Lance Bass has signed a preliminary contract and is officially a candidate for a Russian mission to the International Space Station this October. This, even the United States National Aeronautics and Space Administration, which partners with the Russians on the space station project has expressed concerns that the pop musician may lack the proper education, endurance and fluency in Russian to undertake such a journey.

But a spokesman at Russia's Baikonur Cosmodrome training center in says that within a week Bass will begin training. The spokesman said that the singer should be able to cover enough ground to make the trip adding that three months was more than enough time to teach him the basics.

Bass will be the third space tourist to pay Russia $20 million to visit the orbiting outpost. Previous space visitors were U.S. millionaire Dennis Tito KG6FZX and South African entrepreneur Mark Shuttleworth. Tito and Shuttleworth did find time to use the ham gear on board the station. Bass interest in Amateur Radio operations from the ISS is still unknown. (ARNewsline™ from published news reports)

RADIO IN SPACE: LISTEN TO JUPITER ON YOUR HAM TRANSCEIVER

Want to hear what’s happening on the planet Jupiter? Just listen on the 15 meter band. So says Popular Communications Magazine in an article aptly titled Listening To Jupiter On Your Shortwave Receiver.

No, you won’t hear the latest scores from the Jupiter Red Sox playing the Mars Marlins. What can be heard is the natural sound of the orange giant. An electromagnetic wave that’s emitted at irregular intervals by Jupiter that the article describes as a sweeping lighthouse like sound.

All you need to listen in is a shortwave receiver that can tune the good old A-M mode and a decent antenna. Exactly how to listen and what to listen for is on pages 8 and 9 o the August issue of the magazine. (PopComm)

**

INTERNATIONAL - NEW ZEALAND: TECHNOLOGY CONVENTION 2003

>From Down-Under, word that the New Zealand ham radio Technology Convention will now be held once every two years. Formerly called the VHF Convention, this bi-annual event now caters for a broader range of interests.

The Convention was last in Whangarei over Easter Weekend 2001. The New Zealand Association of Radio Transmitters days that it is currently is looking for a host club for Technology Convention, 2003. (NZART)

**

INTERNATIONAL - UK: HAMS GET NEW PROPAGATION STUDY BAND:

UK Radio Amateurs will shortly be able to use a number of spot frequencies around 5 MHz, to take part in a four-year propagation study. A full Class-A license holder wishing to take part will require a Notice of Variation to his existing license. At the present time, the final administrative arrangements are being put into place. A further announcement will be made regarding the start date shortly. (GB2RS)

**

INTERNATIONAL - UK: THE GREAT NEW TOOTH PHONE

Meantime, a pair of British engineers say they have invented a revolutionary tooth implant that works like a mobile phone. The 'tooth phone', designed by researchers James Auger and Jimmy Loizeau, consists of a micro sized receiver, transmitter and a transducer that are implanted into a tooth during routine dental surgery. Sound, which comes from the tooth is transferred to the inner ear by bone resonance. This means information can be received anywhere and nobody else can listen in. (Science & Technology)

**

DX

In DX, DJ6TK, is vacationing and operating 6 meters from Bornholm Island on CW and SSB mostly in his afternoon or late evening hours UTC. Listen for him signing JO75LA and possibly from JO74MX as well. (MDX)

I2IA stroke ID9 will be active from Ipari Island through September 15th. He intends to visit also other islands in the Eolie group during this time. (GB2RS)

And a group of operators from Indonesia and Italy plan to activate Masalembu Island as 8A3M from July 29th through August 4th. They expect to be on the air with two or three stations on SSB, CW and RTTY. QSL via IZ8CCW. (OPDX)

**

THAT FINAL ITEM: CAPTAIN KIRK - “THEY BE WHALES”

In what sounds like it’s right out of a Star Trek movie plot, will Captain Kirk and Mr. Spock have to go rescue some whales from oblivion after all? And what does this have to do with radio communications? Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the answers to both of these questions:

--

In the movie Star Trek The Voyage Home, the crew of the star-ship Enterprise -- without the Enterprise -- takes on the job of saving our planet from annihilation by a space probe. The probe is angry because it is programmed to contact Humpback whales, but it cannot find any because all the whales are long gone from the planet. To save the world, Kirk and crew travel back in time to get some whales and bring them into the future.

With that in mind, picture this. The administration has now given the Navy permission to begin using a powerful new low-frequency SONAR to identify enemy submarines.

SONAR, which stands for Sound Navigation and Ranging, is usually used to observe objects in water to determine distance. According to the Navy, each of the new SONAR’s eighteen transducers produces an audio signal equivalent to the noise level you would hear if you stood next to an F-15 fighter jet while I was taking-off. It is this high power that makes it possible for the sound waves to travel several hundred miles and return an accurate target echo.

But environmentalists are worried. They note that that the new SONAR system operates in the same band of frequencies used for communication by many large

whales, including Humpbacks. They say that whales are particularly susceptible to SONAR interference because they rely on sound for communication, feeding, mating and migration. In fact, they navigate the oceans of the world using a kind of natural SONAR of their own.

Some scientists believe that whales will mistake the Navy SONAR signals for other whale pods and swim in the wrong direction. And they believe that if this happens, the worlds whale population will decrease.

Others disagree. This group of researchers believes that the two can co-exist with careful monitoring of the whales for any adverse effects which might be noticed. Adjustments could then be made to the SONAR systems operation to minimize or eliminate any problems.

The bottom line is that it's a tradeoff in communications. That of the whales versus the need of the public to be safe from enemy attack.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

The National Marine Fisheries Service says with proper monitoring and safeguards, the Navy’s new SONAR is not likely to injure whales or any other marine mammals. But to be on the safe side, we hope Captain Kirk, Mr. Spock and Scotty are standing by. (Adapted from published news reports)

> stupid us-against-them confrontations.

And it ain't over yet. This is from David Hinckley's radio column in the New York Daily News that mentioned the benefit:

Members of the other side in last year's battle are charging that current management has done exactly what it criticized previous management for: banning and firing employees who disagreed with them.

Producer Paul DiRienzo, in a letter to Pacifica Board Chairwoman Leslie Cagan, lists 38 people he says have been affected, including former WBAI hosts Santiago Nieves, Clayton Riley and Marjorie Moore. The letter says a court order forbids "such firings and removals."

According to the letter, "many people have suggested" that Pacifica stations "are starting to sound like a Soviet-era propaganda machine." It also raises procedural and operational questions.

The current management says it is on solid ground and moving forward.

The Pacificistas are making themselves more and more irrelevant--and this is from someone who doesn't consider himself a conservative (although the Pacificistas probably think I am, because you have to agree with them 100% to not be).

I remember hearing the Belize station on 834 back in the 80's...in fact, I even have a
QSL from them!

Since then, they have either moved it on to some more rational frequency (i.e. one that ends in a zero),
or gotten rid of AM altogether in favor of an FM network, I forget which.

Hey, Pacifica has just been through a helluva war, and it's new governance is not yet firmly established; there's going to be people taking pot-shots for a while yet.

Once the permanent Pacifica Board is established along with the new by-laws, and the new local board is put in place, the "us" and the "them" will change to something less internecine. Give 'em six or eight months.

If you pick and chose, even today, WBAI has some superb "appointment" programming, untouched by the internal fighting; and all things considered, it has a damned sight better record for public service than any commercial radio station.

2280. Can you help me with some Radio job links?

Depends on what you mean by "did just fine". If you mean some sort of sound was going out on the air, yes. If you mean "did it sound good and did it have the capability to handle the programming complexity required by some of today's formats", then a resounding "no". Without a certain level of sophistication, it is impossible to do a daily show with the host halfway across the country and make it sound local. That's a fact of life.

> Not to work weekends, I bet! And you are unclear here: Is that $1.5
> million PER PERSON or for the entire gig?

I have been in radio for thirty-five years. At no time during that period have I ever known people getting rich working weekend shifts.

As far as I can tell, the consolidation of radio has had little to no effect on negotiated name-performer contracts. Real talent still gets paid...and paid handsomely. Chair warmers may get less these days than they used to.

From: maccds152@yahoo.co.uk
Message-ID: <ai1nbvgpk1@xuxa.iecc.com>
Source record: 10344

Ok, this is just something we threw together to serve anyone that wants to find a job, radio station, sell broadcast equipment, etc. You know what I mean.

We won't charge you, scan your email address (honest; I hate spam); all that. It is just us, former broadcast professionals, small town guys spending our spare time doing this for free.

I noticed that no one has anything like this (except if you pay for an ad) on the net.

Anyway, will leave it up for everyone to use free and hope to (someday) put a "form" up so you don't have to email us with your ad in the future. If you don't want your email address posted there (let us know) so spammers can "glean" it for their lists, just put "hatespam" or something unique in the middle of your address or tell me and I'll put it on 2 lines like we did ours.

Hope you like it. Let me know if you have any suggestions to make it better.

best regards,
Rick Vogel

PS. our email address has uk in it; why? don't ask me why yahoo did that, but we are in Montana, USA mainly serving USA and Canada.

Clear Channel alone (which only owns about ten percent or less of the receivable stations in the SF Bay Area) offers stations that play Classic Rock, Album Rock, 80's Rock, Light Jazz, two flavors of Urban, Big Band, and a talk station. If that doesn't float your boat, then there's Oldies, 24/7 News, Alice, A/C, and Easy Listening from Infinity. No? Then how about Classical, Women's A/C, and Rock from Bonneville. All right, then how about eclectic Rock, Sports Talk, and Classic Rock from Susquehanna.

And that's not to mention Religious, foreign language various, Spanish language various, and "inspirational radio" from some smaller stations. Oh, and Country and CNN from Empire. And I couldn't even begin to name all the stuff you can hear on the dozens of high school, college, university, and community stations all around the area.

Yep...no choices on radio. Might as well throw the set in the recycle bin.

Well, in my market, (#87) there are 28 non-CCU stations from which to choose. And since the top-rated CCU signal is doing in the neighborhood of a 5 share, I'd say a lot of people, probably including a large number of "average listeners," are so choosing.

Belize was not a signatory, as it did not exist at the time of the ITU
accords, having beenpart of the British Commonwealth.

France is a signatory, and still uses 1375 in North America (St. Perre et Miquelon). In the 60's and 70's, at least Paraguay, Bolivia, Per&#65533;, Ecuador, Surinam, Panama, Nicaragua, Costa Rica, El Salvador, Honduras, the Netherlands Antilles, St. Kitts, Antigua, Cayman Islands, Grenada, and a few others in this Hemisphere assigned stations to intervals not in compliance with the ITU.

Digital radios on 10 kHz increments did more to elimate these than any
legislation or treaty.

David and I had some rather pointed exchanges about the nature and future of radio listening about two years ago in which he defended the research method of bottom up marketing and product refinement, and I defended the more bold experimental approach, putting a new vision to work, and creating something fresh, and exciting from passion, experience, and an artistic drive. We wound up touching on everything from new cars, to fast food chains, to mom and pop motels, to radio, to music and consumerism in general. One conversation it came out that on the road he doesn't like surprises and finds the familiar more comforting, and I like the sense of adventure. He flies from site to site, in relative comfort on major airlines, staying in familiar hotels, while I go a more unorthodox route....for a V/O session in St Louis last month, instead of letting the client fly me down from Chicago, I pulled my tour bike out of the garage, crossed Illinois to the Quad Cities and rode down the Great River Road, paralleling the Mississippi, sometimes less than 3 feet from the water, from Moline to St Louis. It was magnificent. I think my way is the better way, personally, but David's schedule may be tighter than mine. And there is always personal taste.

Along the way, I heard some of the most interesting music; things I'd never heard before, on some of the most God awful radio stations I'd heard in a very long time. It was a heavenly two days. Including the overnight in the Hotel Clemmons at Hannibal. And the home made root beer at the base of the lighthouse, the coffee shops in every armpit burg along the way, the Mormon Temple at Nauvoo (Six Flags over Jesus), and the breathtaking scenery through the rocks, which included the river, from Hannibal to St Louis on the Missouri side. (I"ve got pictures if anyone would like to see them.)

I'm not thinking David does business trips the way I do. A pity.

In the ensuing months, I see that David and I are not so far apart when it comes to listening. When it comes to radio that we prefer for entertainment. He has more than an off beat, out of the mainstream taste. And that's good to see.

But he and I share exactly the same remedy to radio that we do not enjoy. Exactly the same remedy that the average listener has access to when he finds radio that HE doesn't enjoy. Turn the damned thing off.

I find myself listening to NPR a bit, and some talk...but for the most part, I enjoy international broadcasts on Shortwave. Some BBC relays when I catch them, Radio Australia, Radio New Zealand International, Radio Nederland, Deutsche Welle...the choices are wide, varied, and definitely not overresearched, homogenized, vanilla pap.

If you don't like what Radio is doing these days, by all means voice your opinion, especially to the stations that offend you, but exercise your other options as well.

If you don't like something, turn it off.

If enough people follow your lead, trust me, CCU and CBS/Infinity will come TO YOUR HOUSE to find out why, and move heaven and earth to bring you back.

Because there's money in it.

Spread the word to as many average listeners as you know....if you don't like what you hear....turn it off. And tell people. That's the choice of the average listener.

Pretty powerful, too.

Quoth mjeffries@krw.com (Mark Jeffries) in news:ai1e91roh1@xuxa.iecc.com:

> Producer Paul DiRienzo, in a letter to Pacifica Board Chairwoman
> Leslie Cagan, lists 38 people he says have been affected, including
> former WBAI hosts Santiago Nieves, Clayton Riley and Marjorie Moore.
> The letter says a court order forbids "such firings and removals."

Sour grapes, at best.

Rienzo and his letter are both piles of shit, in my opinion.

There's no substance to their claim; the fact that they have gotten exactly nowhere with their complaint since January, when they were replaced, is evidence enough of how weak it is. There's plenty of documentation of how DiRienzo and Riley, specifically, threatened the ability of the Pacifica Foundation's ability to keep possession of WBAI's FCC license with their criminal behavior on and off the air. Some of it may be found at <http://www.radio4all.net/search.php> -- if you are interested, put "WBAI" into the search engine, and check out some of the audio clips before January 13, 2002.

They don't dare take their complaint to court, because they'd be digging themselves even deeper into their self-created hole.

2295. New Rare Daws Butler Radio Online

Source record: 10257

New at Comedy-O-Rama:

"Table Talk" (17:25) written by Daws Butler
Performed by Nancy Cartwright, Joe Bevilacqua and Daws Butler

You can hear it at:

http://www.comedyorama.com/listening/listening.htm

It will be the second sound item on the page.

It was recorded on Wednesday, December 19, 1984 at 7:30 p.m. at Daws Butler's Workshop Studio in Beverly Hills, CA

This rare, never-before-released recording features mentor Daws acting with two of his favorite prot�g�s: Joe Bevilacqua and Nancy Cartwright (the voice of Bart Simpson).

"Table Talk" is one of Daws's best and most allusive scripts, filled with delicious non sequitur lines. Think "Bob & Ray" meets "Mary Hartman, Mary Hartman"!

Enjoy!

This is a repost as I forgot to give the URL on the first one (silly me).

Ok, this is just something we threw together to serve anyone that wants to find a job, radio station, sell broadcast equipment, etc. You know what I mean.

We won't charge you, scan your email address (honest; I hate spam); all that. It is just us, former broadcast professionals, small town guys spending our spare time doing this for free.

I noticed that no one has anything like this (except if you pay for an ad) on the net. It is located here:
http://www.montanasat.net/rickv/broadcastprof.htm

Anyway, will leave it up for everyone to use free and hope to (someday) put a "form" up so you don't have to email us with your ad in the future. If you don't want your email address posted there (let us know) so spammers can "glean" it for their lists, just put "hatespam" or something unique in the middle of your address or tell me and I'll put it on 2 lines like we did ours.

Hope you like it. Let me know if you have any suggestions to make it better.

best regards,
Rick Vogel

PS. our email address has uk in it; why? don't ask me why yahoo did that, but we are in Montana, USA mainly serving USA and Canada.

Clear channel isn't in Canada (yet) but we do have situations where every station in a market is owned by one company. Must make it difficult for the local client, very little bargaining room and no where to go if you don't like the price. I guess one salesman trots out a very big dog and pony show. Bet it's bonus, bonus, bonus, and a big "value" at the bottom of the page.

Stop. You are fined the legal limit for excessive nostalgia.

A couple of years ago, I went to a technical seminar at BE in Quincy. I took extra days to drive and stay in Hannibal and take some liesurely walks along the Ole' Man river. Then, I went to Chandlerville, IL, near Jacksonville. This was a town that may have existed in the past, but today is breathing fumes; it was founded by my Great Great Uncle in ante-bellum days.

The Hannibal / Mississippi experience was wonderful; the Chandlerville one showed how different a nation we are now than when the rural born surveyor of my distant Uncle's property could become President with no party machine and no influence peddling to speak of.

Sometime I will tell you about my recent trip to my client in Argentina that included a weekend to Tierra del Fuego and an "almost" in getting on the military supply plane to the base on Antarctica (a series of 5 presidents in 10 days caused the filights to be cancelled); I have a rain check for next Summer (actually, December to January are the only really safe openings).

Most of the time I don't have time for this, although when younger and consulting in Mexico, I managed to visit 29 states of Mexico on planes and busses by staying over extra days and using the station trade. Most of my trekking and adventure comes in Latin American portions and I have been to every country (including a hijacked plane to Cuba) at least once.

Spaking of polarity... my favorites are netcasters such as La Vallenata (rural Colombian music done in Top 40 style), Europe 2, Ch&#65533;rie FM (Francophone oldies form France) and a bunch of others that are even more obtuse. It is interesting that folks rant about the failure of existing stations to play thier particular pet mix of music, yet they never explore other genres. I find listening to a local CHR from Djakarta fascinating; Persian music I discovered on KIRN is really interesting and addictive. My current musical fetish is country, and I can now sing along with "I'm Gonna Miss Her (the fishing song" and "Ten rounds with Jos&#65533; Cuervo." Its a lot of fun to discover something new, but when I do, I want to hear the good songs often, not obtuse and obscure songs one after a-friggin-nother.

Actually, the only fees radio pays at the moment are for the author and composer, not the recording or the artist. So doing your own version of "Imagine" would pay composer's rights all the same.

I wonder if they keep broadcast manufacturers in the mid-west so that some of us can get that occasional change of pace. I've been to the Quincy Tin Works (otherwise known as Harris Corp.) several times to "test witness" new transmitters, as well as to ERI in Evansville to do lambda tower field pattern measurements.

The electrical storms I've seen in southern Indiana put out more flash and boom in one day than we get here in a year.

What a pity it would be if these companies were located in Silicon Valley!

Spaking of polarity... my favorites are netcasters such as La Vallenata (rural Colombian music done in Top 40 style), Europe 2, Ch&#65533;rie FM (Francophone oldies form France) and a bunch of others that are even more obtuse. It is interesting that folks rant about the failure of existing stations to play thier particular pet mix of music, yet they never explore other genres. I find listening to a local CHR from Djakarta fascinating; Persian music I discovered on KIRN is really interesting and addictive. My current musical fetish is country, and I can now sing along with "I'm Gonna Miss Her (the fishing song" and "Ten rounds with Jos&#65533; Cuervo." Its a lot of fun to discover something new, but when I do, I want to hear the good songs often, not obtuse and obscure songs one after a-friggin-nother.

Actually, the only fees radio pays at the moment are for the author and composer, not the recording or the artist. So doing your own version of "Imagine" would pay composer's rights all the same.

John Higdon <no-spam@kome.com> had written:

| I wonder if they keep broadcast manufacturers in the mid-west so that some
| of us can get that occasional change of pace.

I think it's more by accident than anything else. Or perhaps
centrality of location.

Having 91-year-old relatives in Missouri also provides for a change
of pace, too (not all good, unfortunately; but she's recovering
quite well from the broken hip, fortunately).

| The electrical storms I've seen in southern Indiana put out more flash and
| boom in one day than we get here in a year.

Heh. Heh, heh, heh.

When I had the Stereo Probe Nine on the roof of my house in Kansas
City, I wasn't laughing, however. During the summer, I always
disconnected that antenna every day before going to work.

I have been frustrated about the lack of certain regional programming
in the area I live in. So out came these questions:

* How does one go about starting a radio station in AM band?
* Or possibly buying time in radio stations to broadcast your own
programmes?
* Is it also possible to "bounce" radio transmission from a station,
say in Europe and re-broadcast it in the US?

Thanks in adavance for any help

VAsava

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the

University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

Simple question...who are the entities...regional indie promo guys...insiders...focus groups.. that need to be paid off b4 a song gets into heavy rotation? I would like to know..

How to get a song on the radio

Do tell..

Some body break it down..people to call...costs to consider...be honest..I can take it.. That's what it boils down to in the century 2g so bring it...Facts and figures people...names and lists....chicken and egg...payoffs..magazine articles...payoffs..mtv...itemized lists care of indie promo...break it down for us who know half the story not the whole....

H..

2319. Shredding Radio Playlist 8/1

Newsgroup: rec.radio.broadcasting
Date: 2002-08-01 12:28:29 UTC
From: shreddingpaper@netscape.net
Message-ID: <aib9hd$59k$1@xuxa.iecc.com>
Source record: 10280

We've got new tracks from some cool Japanese bands today including River and Penelopes. We've also got a brand new track from Belle and Sebastian. But wait, there's tons more, including a track from the Television Personalities retrospective distributed in America by Bus Stop, a Swedish band called Free Loan Investments, whose new CD on Shelflife is one of the year's best releases, and more! We're still featuring tracks from the Flaming Lips, who will grace the cover of SP #14 in September, but they are on hiatus until Monday. By the way, Shredding Paper #13 is sold out. You can order any of the previous issues, but SP #13 is gone forever.

http://www.shreddingradio.com/

SHREDDING RADIO PLAYLIST August 1st - 4th

Another Sunny Day - Genetic Engineering
Ashland - Gleemer
Badger Haus - Spring Is Here
Barcelona - Sunshine Delay
Belle & Sebastian - Desperation Made a Fool Of Me
Bitesize - Understudy
Blue Chieftans - Real Good Time
Bodysnatchers - Ruder Than You
Bouquet - Saucer
Calmer - Always
Candyland Riots - Somewhere...
Cartoon Characters - They Don't Know
Cherry Lane - Coins in Fountains
Cherry Orchard - Jean
Cinerama - Your Time Is Now
Free Loan Investments - I Don't Love You
Hi Frequencies - Peggy Sue Got Married
Kleenex Girl Wonder - Amelia
Laika & the Cosmonauts - Land's End
Laura Watling - So Responsible
Madder Rose - Swim
Manic Street Preachers - Stay Beautiful
Mark Brodie - Suicide Ride
Penelopes - River
Penningtones - Teenager In Love
Pia Fraus - Outskirts of Me
Pixies - Here Comes Your Man (original)
Poconos - Booksmart
Pogues - Sally MacLennane
Should - Feels Like Morning

Skiptrace - Don't Support the Band
Slow Wire - Motor Away
Sneetches - She May Call You Up Tonight
Soda Pop - Rest
Sonny Sixkiller - Pass The Baton
Spectacle - Needles In the Camel's Eye

I haven't a clue and could care even less. I was simply pointing out that anyone who had to ask wasn't ready for prime time music promotion. In other words, anyone who has to ask in a newsgroup how to get a song on the air (a process that has changed little since the payola scandals) isn't ready to get a song on the air.

And I'm long past having to prove to anyone how much I know about broadcasting.

I haven't a clue and could care even less. I was simply pointing out that anyone who had to ask wasn't ready for prime time music promotion. In other words, anyone who has to ask in a newsgroup how to get a song on the air (a process that has changed little since the payola scandals) isn't ready to get a song on the air.

And I'm long past having to prove to anyone how much I know about broadcasting.

I just wish one of them happened to be someone I know personally so I could check it out on an extended basis. When I realize that most of my friends are dedicated gadget freaks and NOT ONE of them has either XM or Sirius, I have to wonder...

About 132,000 at the end of June 2002, IIRC. XM is clearly banking on a
lot of sales in 2003-model cars to meet their goal of 350,000 by the end
of calendar 2002.

According to a Salon.com article,

"Generally, the indies pay between $100,000 and $400,000 per station,
depending on the size of the market. Once that deal is signed, the indie
sends out weekly invoices to record companies for every song added to that
station's playlist. "

"Roughly $800 per song in middle-size markets and $1,000 and more in larger
markets, up to about $5,000 per song for the biggest stations in the biggest
markets. "

They also go on to say:

"Jeff McClusky & Associates, (is) the nation's largest independent promotion
firm"

It must be true, I saw it on the internet. Glad I could help

Amateur Radio Newsline™ Report 1303 August 2nd, 2002

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the website front page.

==========

Amateur Radio Newsline report number 1303 with a release date of Friday, August 2nd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio may be headed to Mars. That’s right. We said the red planet Mars! Find out how on Amateur Radio Newsline report number 1303 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: WE ARE GOING TO MARS

Ham radio could be headed to the Red Planet in a few years. This as the German ham radio space agency announces some ambitious plans for future Amateur Radio operations from outside the Earth’s atmosphere. CQ Magazine Editor Rich Moseson, W2VU has the details:

--

AMSAT-DL the German amateur radio satellite organization has announced plans to build two new amateur spacecraft, including one destined for orbit around Mars! Now, the AMSAT News Service, says that the so-called Phase 5-A satellite could be launched in the 2007 to 2009 timeframe and that it will include subpayloads that would be launched from the main satellite,

either to the planet's surface or into the Martian atmosphere.

These devices would transmit scientific data back to the "mother ship." It would then use a repeater to relay the information back to hams on Earth. AMSAT-DL officials say that the 2000 launch of AMSAT-OSCAR 40 showed that the basic satellite design was capable of a trip to Mars.

The AMSAT-DL board of directors has also given a green light to developing a Phase 3-E earth-orbiting satellite. This would be a more traditional amateur bird, offering two-way communication links on amateur bands between 145 MHz and 10 GHz. In addition, it will serve as a testbed for some of the technology needed for the Mars mission.

AMSAT-DL has been the lead AMSAT group on the past three large amateur satellites placed into orbit. This includes AMSAT-OSCAR-10 which is still operating, AMSAT-OSCAR-13 which is no longer in orbit and AMSAT-OSCAR-40.

For the Amateur Radio Newsline, I’m Rich Moseson, W2VU.

--

No launch timetable has been announced for Phase 3 E, but it is expected to be several years before the anticipated launch of the mission to Mars.

information about both missions can be found at:
http://www.amsat-dl.org/p3e/towards-p3e.pdf and
http://www.amsat-dl.org/p5a/p5a-to-mars.pdf (ANS, CQ)

**

RESCUE RADIO: JULY 4th WATER RESCUE ACCOMPLISHED THROUGH HAM RADIO

Its ham radio to the rescue on Thursday, July 4th. This following a water accident involving a teenage girl on Utah’s Lake Powell. Roy Neal, K6DUE has the details:

--

STEVE WILLIAMS, K0SRW, REPORTS THAT A TEENAGER . WHO SHALL HERE GO UNNAMED BECAUSE OF HER AGE, WAS RIDING A TUBE BEHIND A RENTED SKI BOAT. THEY WERE GOING FAST UNTIL SHE HIT A WAVE AND SUDDENLY…UNEXPECTEDLY…WENT AIRBORNE. THAT’S USUALLY LOTS OF FUN FOR KIDS BUT THIS TIME THE YOUNG GIRL LANDED THE WRONG WAY. HER NECK HURT. SHE COULD HARDLY MOVE HER NECK AND BACK.

WILLIAMS WANTED TO CALL FOR HELP BUT THE ACCIDENT TOOK PLACE ON LAKE POWELL, WHICH IS A HUGE PLACE…186 MILES LONG WITH ALMOST 2 THOUSAND MILES OF SHORELINE. MAJOR CANYONS, 96 OF THEM, SOME 15 TO 20 MILES LONG, RISE UP BEHIND THE SHORE.

A MARINE RADIO CAME WITH THE HOUSEBOAT THAT WILLIAMS RENTED BUT THEY WERE TOO FAR OUT TO MAKE CONTACT. CELLULAR TELEPHONES ARE ALMOST NON EXISTENT IN THE TERRITORY. SO K0SRW TURNED TO HAM RADIO. WILLIAMS HAD A YAESU 900 AND OUTBACKER ANTENNA ALREADY SET UP. ON 20 METERS, HE HEARD W8VRT, LEN KERSCH, IN ANN ARBOR, MICHIGAN, SEVERAL HUNDRED MILES AWAY.

KERSCH WAS TAKING PART IN A NET, ON 14.178 Mhz. WILLIAMS BROKE IN, EXPLAINED THE SITUATION AND GAVE A PHONE NUMBER FOR THE BULLFROG MARINA, AT LAKE POWELL. KERSH CALLED THE MARINA. THEY CONNECTED HIM WITH THE NATIONAL PARK SERVICE. ANOTHER WILLIAMS…KARL WILLIAMS, KD5AW, IN OKLAHOMA CITY BROKE IN TO ASSIST BY RELAYING INFORMATION BETWEEN W8VRT AND K0SRW.

ABOUT 25 MINUTES AFTER THE INITIAL CONTACT, A MEDICAL HELICOPTER AND A NATIONAL PARK SERVICE BOAT ARRIVED. THEY DECIDED TO AIRLIFT THE GIRL BY HELICOPTER TO A HOSPITAL AT GRAND JUNCTION, COLORADO. STRANGE TO RELATE, THE PILOT ALSO WAS A HAM…TOM CALDWELL, KC7BPK, WAS AT THE CONTROLS.

THERE WAS NO ROOM FOR THE PARENTS IN THE HELICOPTER. THEY TOOK OFF TO TRAVEL SOME 4 HOURS BY BOAT AND CAR. AS THEY DROVE AND GOT BACK INTO CELL PHONE RANGE, GOOD NEWS WAS WAITING FOR THE ANXIOUS PARENTS. X-RAYS SHOWED THEIR DAUGHTER WAS NORMAL…NO PERMANENT INJURIES. THIS HAM RADIO RESCUE STORY HAD A HAPPY ENDING.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

Williams says he is grateful to all of the hams who assisted in the rescue. Because of them an injured youngster quickly received medical aid in a rather remote part of the USA. (K0SRW)

**

RESCUE RADIO: HAMS READY FOR WASHINGTON TRAIN DERAILMENT

Ham radio was ready but not really needed at a July 29th train derailment just outside of Washington D-C. An AMTRAK liner was enroute from Chicago to Washington when many of the passenger cars left the track near Kensington, Maryland. About 90 people were taken to area hospitals, three reported in critical condition. One news report said that a ham radio communications team was on its way to supply assistance but with no real communications failure, their services were found to be unnecessary. The news story did not mention anyone by name or call sign. (ARNewsline™ from news reports)

**

RADIO LAW: QCWA FILES IN FAVOR OF NEW HAM BANDS BUT SOME MEMBERS SAY THEY SHOULD HAVE BEEN ASKED

The Quarter Century Wireless Association has filed in favor of the ARRL proposal to create new ham radio bands. While most members of the QCWA appear to agree with the FCC filing, there is one group that is taking the Board of Directors to task over how it was done.

Its not because they disagree with the content. Rather, calling themselves the “vocal minority,” these hams are using the QCWA electronic remailer to complain that the board did not send paper or electronic copies of the proposed filing to all members. Also, they say that the board did not individually poll the members for their opinions before writing the QCWA position and sending the paperwork to the FCC.

But outgoing QCWA President Gary Harrison, K0BC, says that the reason it was done this way is simple. It was a matter of time.

In a posting to the QCWA Reflector, Harrison says that there was a limited amount of time to file comments. He also notes that there are only about 300 QCWA members are on the groups electronic mail list. That would mean preparing a paper mailing, sending it out and waiting for members to write back.

Harrison uses QCWA election figures as an example. He says that it takes about two years to complete an election cycle and the organization receives only about 30% return of the ballot. The cost of mailing material out for this election is about $2,000.

What about the organization's magazine called the QCWA Journal? Harrison says that it takes two months to prepare and mail it from the deadline for submitting articles. And be it a paper ballot or an announcement in the Journal, the QCWA would have to allow several months to permit input from the membership. In this case waiting would mean that the QCWA could not file because the commentary cutoff date had passed. (ARNewsline™)

(5 sec pause here)

**

CHANGING OF THE GUARD: STEVE MANSFIELD, N1MZA – S.K.

Some rather sad news to report – especially for us here at Newsline. It comes in word from the American Radio Relay League that its Legislative and Public Affairs Manager Steve Mansfield, N1MZA, has died of complications to brain cancer at age 55.

Steve Mansfield came to ARRL service in 1991 as an expert in the area of Public Relations. It did not take long for his bosses at League headquarters to realize his enormous potential as a people person. As a result, the hallowed halls of Washington D.C. soon became his beat and he spent the next eleven years as the point man between the ARRL and numerous political leaders.

ARRL President Emeritus George Wilson, W4OYI, had the opportunity to work with Mansfield. He tells Amateur Radio Newsline that he recalls one incident just before a major convention out in California. There were a lot of very controversial issues on which the League had taken considerable heat. Wilson gave Mansfield the job of searching out all issues and prepare a short "position paper" on each for W4OYI. The former ARRL president says that Mansfield did such an outstanding job that he had copies sent to all Directors and Vice Directors. The result was what

President Wilson called tons of favorable comments, and a real tribute to the dedication of N1MZA.

Mansfield was also seen at many hamfests and conventions. In most cases speaking at public relations sessions hosted either by the ARRL or by us here at Newsline. And that's really where we got to know him as a friend, a college and as an expert in the topic of relating to other people.

Steve Mansfield was first diagnosed with brain cancer in 2000 and had surgery to remove the malignancy. He was doing well until recently when he suffered a series of setbacks. He passed away on Monday July 29th. He is survived by his wife Ellyn daughters Ramona and Elizabeth and the friends he made in and out of ham radio, worldwide. (ARRL, W4OYI, ARNewsline™)

**

CHANGING OF THE GUARD: FATHER MIKE MULLEN, WB2GQW – S.K.

The Reverend Michael Mullen, WB2GQW, a past winner of the ARRL International Humanitarian Award, became a Silent Key in June. "Father Mike" was a professor and past chairman of the humanities department at St. John's University in New York. He was best known in amateur radio for his involvement with IMRA, the International Mission Radio Association. IMRA maintaines lines of communication using amateur radio for missionaries. It also inter-connects various humanitarian agencies over the air after disasters.

According to the New York Daily News, in addition to his ARRL International Humanitarian Award, Father Mike received the St. John's University Presidential Medal and was listed in the
international edition of "Who's Who in Education." He was 87 at the time
of
his death. (CQ, NY Daily News)

**

NAMES IN THE NEWS: A NEW BOOK BY N6NHG

Former computer hacker Kevin Mitnick, N6NHG, has turned author. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Kevin Mitnick, N6NHG, Mitnick is the California ham whose license renewal application has been designated for hearing by the FCC. This, based on his conviction for hacking. And now according to news reports, he has written a soon to be released book on computer hacking and -- more important -- how to prevent being hacked.

According to the reports, Mitnick's book -- The Art of Deception -- is a novel that describes more than a dozen scenarios where hackers dupe computer network administrators into divulging passwords, encryption keys and other security details. Mitnick claims that its all fiction with any personal details having been kept out of the book which reportedly uses

fictitious names of hackers, victims and companies.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Earlier this year the FCC designated his application to renew his Amateur licenses for a public hearing. The FCC contends that Mitnick may no longer possess the requisite requirements to remain a Commission licensee. (Published reports)

**

CONVENTIONS: HUNTSVILLE HAMFEST

Two conventions on almost opposite sides of the country are taking place the weekend of the 17th and 18th of August. In Huntsville Alabama, the Huntsville Hamfest takes place at the Von Braun Center's South Hall right across the street from the Huntsville Hilton Hotel. Since the first Huntsville Hamfest in 1981, this event has grown to the point where the Amateur Radio manufacturers and dealers consider it to be one of the seven major hamfests in the country, pulling a gate of between 5000 to 6000 every year.

We at Amateur Radio Newsline have presented our own Young Ham of the Year Award at the Huntsville Hamfest since 1993. 2002 is no exception. So please join us at 2:00 P.M. Central time on Saturday August 17th as we, our corporate underwriters Vertex Standard and CQ Magazine along with the people of Huntsville honor 17 year of Josh Abramowicz, KB3GWY as the 2002 Amateur Radio Newsline Young Ham of the Year. More information about the Huntsville Hamfest is in cyberspace at www.hamfest.org. (Huntsville Hamfest)

**

CONVENTIONS: ARRL SW DIVISION IN SAN DIEGO

And August 16th to the 18th will se the ARRL Southwestern Division show at the California Center of the Arts in Escondido. The scheduled Banquet speaker will be Riley Hollingsworth K4ZDH. Also on hand will be ARRL President Jim Haynie W5JBP, Big Project Coordinator Jerry Hill, along with Division Director Art Goddard W6XD, and Vice Director Tuck Miller NZ6T. More information is on the convention web site at http://sd2002.hamcon.net. (HAM-CON)

**

CONVENTIONS: HUNTINGTON HAMFEST

And a week earlier on August 10th, the Tri State Amateur Radio Association will host the Huntington, West Virginia Hamfest. Its at the Veterans Memorial Field House, 2590 Fifth Avenue in Huntington from 8:30 AM to 2:30 P-M. Talk in on the 146.76 repeater and V-E administered ham radio exams will also be available. For further information contact Phil Beckett by e-mail- to ab8me@hotmail.com (N8TMW)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only September is canceled. There will be a TRW Swap Meet the last Saturday of the month in August and in October, November and December.

The TRW Swap Meet is famous and draws attendance from across the nation. For more information visit http://w6trw.com on the world wide web. (Via e-mail from TRW A.R.C.)

**

SCIENCE PAGE: THE MAGNETIC NORTH POLE IS ON THE MOVE

The Magnetic North Pole could soon abandon Canada, migrate north of Alaska and eventually wind up in Russia. So says one scientist. Amateur Radio Newsline's Bill Pasternak, WA6ITF, reports on the future of the pole.

--

The e-newsletter Science Today tells of Larry Newitt. Newitt is a researcher with the Geological Survey of Canada. And Newitt says that the magnetic pole is on the move.

The researcher says that the pole, which has steadily drifted for decades, has picked up speed in recent years. He says that at its current speed, it could exit Canadian territory as soon as 2004. And, says Newitt, if the pole follows its present course, it will pass north of Alaska and arrive in Siberia in a half century.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, Los Angeles.

--

If you are worried that you may soon have to trade in your old compass for a G-P-S to know where you are, don't. Researcher Newitt cautions that such predictions could be wrong. (Science Today)

**

INTERNATIONAL - BRAZIL: A NEW LF BAND ON ITS WAY

According to Brazilian amateur PY3CRX the Brazilian licensing authority, ANATEL, has agreed that the 135.7 to 137.8kHz band can be allocated to radio amateurs in that nation on a secondary basis. No date was mentioned for the new band's introduction but PY3CRX adds that the band is, or will be, also available in Paraguay and Uruguay as well. (GB2RS)

**

INTERNATIONAL- CANADA: VY2BP NEW RAC AD

Radio Amateurs of Canada reports that Bill Perry, VY2BP, has been appointed as an Assistant Director for the R-A-C Atlantic Region. Perry will complete the unexpired term of Fred Burke, VY2FB, who recently resigned the position because of family commitments. (RAC)

**

INTERNATIONAL EAST TIMOR: NEW CALL SIGN BLOCK ANNOUNCED

The International Telecommunications Union says that the 4WA to 4WZ prefix block will go to the United Nations Territory Administration of East Timor for as long as it exists. United Nations stations within East Timor will be assigned 4U prefixes. The official U N Club station will get 4U1ET. All other amateurs will use the 4W6 prefix. Those residing in East Timor less than one year will sign 4W6 followed by their home call. People staying beyond one year will be assigned a permanent 4W6 call. And yes, CEPT licenses are accepted. (GB2RS, Q-News)

**

DX

In D-X, the UK-lead youngsters' DXpedition to the Maldives should be on the air as 8Q7ZZ until the 11th of August. The expedition is being lead by 18-year old Mark Haynes, M0DXR. Other operators include 15-year old Robert Morgan, M0TTT, as well as young amateurs from Germany and Spain. 8Q7ZZ will be running up to three stations simultaneously, all with beam antennas and up to 400 watts power out. (RSGB)

Meantime, four French operators are in Benin and active as TY7Z, TY9F, TY4DX and TY6FB until the 14th of August. If you make contact with either operation Q-S-L as directed on the air. (QRZ DX)

**

THAT FINAL ITEM: A SPECIAL HAM RADIO PRESENTATION

And finally this week:
--
“Good afternoon to everybody here. We have a lot of Amateur Radio operators and we have a lot of guests aboard the Queen Mary. And we are here for a very short ceremony to commemorate the 23rd anniversary of W6RO.”

--

That was Bob Heil, K9EID, on Saturday, July 27th, talking to a crowd assembled in the Wireless Museum next door to the Queen Mary's radio room. A radio room that for the past 23 years has been the home of Amateur Radio Station W6RO. And to commemorate this milestone, Bob's company, Heil Sound, donated a half dozen custom made Classic series microphones adorned with the W6RO call sign to the station. These retro look microphones are very similar to the RCA studio mic's of the 1930's. Famed rock musician Joe Walsh, WB6ACU, had the honor of making the actual presentation:

--

Joe Walsh: "These Classic microphones are presented to the Queen Mary amateur Radio Station, W6RO, celebrating the 23rd year of continuous operation provided by the Associated Radio Amateurs of Long Beach California, present by Bob Heil, K9EID, and Joe Walsh, WB6ACU, on July 27, 2002. And we wish you continued success with the station and here you go."

Nate Brigtman: "Thank you very much."

--

Accepting the mics was Nate Brightman, K6OSC, who was the man who conceived the idea of a ham station on the Queen Mary. He was accompanied b the current president of the club, Ray Rittenhouse, KF6WZN. Rittenhouse has a surprise for K9EID:

--
Ray Rittenhouse: "We appreciate this very much Bob, and from our club to you is a certificate of our appreciation thanking you for those microphones we are now putting in W6RO"
--

Then it was Nate Brightman's turn. He told the crowd a bit about the operation of W-6-R-O, and what those who sit at the transmitters get as a token of appreciation for taking the time to operate:

--
Brightman here: ""Those amateurs who come by to visit W6RO aboard the Queen Mary, should they operate the station, we will mail to them a special certificate designating that they had the honor of operating W6RO aboard the Queen Mary."
--

And when it was all over Bob Heil ended the presentation with a bit of a poem:

--
Heil: Nate. Thanks for having us today. And Ray, we appreciate all of your efforts for the club. And we will be seeing you a little high, a little low. But we'll find you somewhere from W6RO. (Applause)
--

Attending the ceremony, were numerous local ham radio operators from the Los Angeles area. This included Vertex-Standard's Chip Margelli, K7JA and film maker Dave Bell W6AQ. The ARRL was represented by Los Angeles Section Manager Phineas Icenbice, W6BF. You can hear the complete presentation as

this weeks Newsline Extra. You will find it as an MP3 file on our F-T-P page only a click away at www.arnewsline.org. (ARNewsline™)

The way the stock market is tanking, they'd better cross their
fingers. If people don't have "expendable income", they do not buy new
cars!

Actually, high-ticket hard goods and homes benefit in times of market
uncertainty. If you look at the figures, luxury car sales are up, as are
higher priced homes.

2337. Norwegian and Swedish Radio Stations

Newsgroup: rec.radio.broadcasting
Date: 2002-08-03 15:24:15 UTC
From: epithalamium7@yahoo.co.uk
Message-ID: <aigsiv$3ak$1@xuxa.iecc.com>

Can anyone help? I live in Eastern England and would like to receive any possible radio broadcasts from Norway and/or Sweden, whether in FM, SW, MW or LW. Does anyone know what stations I might be able to pick up?

2338. The Computer Report Radio Show Names Dina Vannoni, Bufferbabe's Miss Report 2002

Newsgroup: rec.radio.broadcasting
Date: 2002-08-03 15:24:16 UTC
From: billdave@thereport.com
Message-ID: <aigsj0$3ar$1@xuxa.iecc.com>
Source record: 10204

Comments are welcome at: http://www.voy.com/63661/
For more information on the Computer Report on WCAP and Miss Report:
http://theReport.com/index1.htm

Dina Vannoni, Named Bufferbabe's Miss Report 2002

(Tyngsboro, MA. July 21, 2002.) Today, Bill and Dave, of The Report, New England's longest running radio show on Web Entertainment and Technology,announced the winner of their annual Miss Report contest, naming gorgeous pin-up model, Dina Marie Vannoni of California as Bufferbabe's Miss Report 2002.

After a long and often brutal fist-o-cuffs brawl to wrestle the tiara and title of BufferBabe's Miss Report 2002, Miss Vannoni triumphed over nine other contestants. For the first time in the contest's four year history, the contest winner was decided by public voting, in a three-month online voting poll at http://theReport.com/index1.htm .

Dina took the contest by some 2895 votes, or 51% out of a total of 5650 votes on the site. While not a landslide, it was an impressive victory over model/porn star Tricia Wilds who temporarily held the lead in mid-May and racked up 44% or 2493 votes. "Because of Tricia's fine showing in the match, she will be asked to rejoin the fray next year at the Fifth Annual BufferBabe Miss Report contest," the boys, Bill and Dave said.

The transferring of the eTiara (because it's passed around the country typically through the phone lines), is scheduled to air on Saturday, August 31 at 4:30 pm ET on Bill and Dave's eight year radio show, The Report, heard in the Greater Lowell, Nashua, and Boston areas on 980 AM WCAP.

As Miss Report 2002, Dina will model the official T-shirt,("Wet, we hope," say the boys) in photos, and will don halters with the urls BigTips.com and BufferBabes.com emblazened across the chest. This year's winner may even be photographed in the new, official ReporThong. Dina's pictures will appear on theReport.com, bufferBabes.com and BIGTIPS.com later in the year.

The contest to find Miss Report 2003 will begin online almost immediately in early September. Contests must be female between the ages of 21 and 55, in the entertainment business, with some print modeling experience, and a web site. Applicants must have minimum bust size of at least 34DD.

About Miss Vannoni

Dina Marie is a native California girl with an exotic mix of Italian-Filipino. Standing at a "leggy" 5'8", weighing 125 lbs. and measuring 34DD-25-36. She started her modeling career as a young girl and has worked in all aspects of the modeling industry. Doing mainly printwork, she also works in television, film, video, trade shows, conventions, fashion shows, Internet and as a spokesmodel.

Dina has won many swimsuit pageant titles. Her career travels have taken her all over the United States, including Hawaii, Caribbean, Mexico, Europe and Asia. Her voluptuous-athletic build landed her many bookings in the swimsuit, fitness and lingerie market making her one of today's well known "pin-up" models.

Dina Marie has appeared on numerous magazine covers here in the states and in Europe. She has been in several calendars, posters, magazines and catalogs. Some of her credits include; Easyriders, Muslcemag International, Hot Rod Bikes, Fighting Females, Grappling Magazine, Celebrity Sleuth, Hot Boat, Lowrider, Muscle Sport, Swimsuit Illustrated, Speedo Swimwear, Death Row Records and Health World Magazine. She even has her own comic book "The Golden Rule" and is featured as a main comic book character "Hot Stuff" in the comic "Out Of Nowhere". The list goes on...

Her hobbies include weight training, running, golf, basketball and ballet. She also supports animal rights. You can see more of Dina Marie at http://www.dinamarie.com and http://www.dinarotica.net

I hope the satellite radio services can survive on little more than high-end car sales (with included equipment). Those units are not flying off the shelves from retailers, which means that ordinary folks aren't exactly jumping in with both feet.

If this is the case, then the competition to determine who gets in what cars should be entertaining to say the least.

2347. DX season is approaching!

Newsgroup: rec.radio.broadcasting
Date: 2002-08-04 13:55:31 UTC
From: ircamember@ircaonline.org
Message-ID: <aijbojgpl1@xuxa.iecc.com>
Source record: 10213
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Calling all BCB DXers...

It's that time of year again! DX season is fast approaching, and DX tests are being planned. What is a DX test, you ask? From the IRCA web page (courtesy of JD Stephens):

"A DX test is a special transmission aired by a station for the specific
purpose of giving DXers a chance to log their station - something that in many cases may be very difficult or impossible to do under normal circumstances.

DX tests must be aired during what the FCC calls "experimental hours", which is between midnight and 6 am local time at the station. Also, most
DX tests are scheduled for Monday mornings, because traditionally Monday
mornings have been a time for many stations to do routine maintenance on
their transmitters. This is good for the station, because many of them will work in a DX test during their normal testing/maintenance. This is
good for the DXer, because the band is less congested at this time - thus increasing in many instances the DXers chances of hearing a station.

DX tests programs are as varied as the stations themselves. Most will include Morse code identifications and test tones (two things that really "cut through" the interference better than voice or music), and many will include some special music which will really "stick out" as something out of the ordinary. Examples of this are March music, polkas,
TV & movie themes, or Christmas music played at an odd time of the year
(such as in October).

There are some DX tests which are scheduled on Saturday or Sunday mornings, and, at the request of the stations, on other mornings. But, most are usually scheduled for Monday, Saturday or Sunday mornings."

If you'd like to receive a weekly summary of DX tests, sponsored by IRCA (International Radio Club of America) and NRC (National Radio Club), please let me know, via e-mail, at ircamember@ircaonline.org. Thanks to IRCA member R.C. Watts, we have some tests, mainly from the southern IN/northern KY area, already planned for the fall! For

starters, I'll plan on using the list of e-mail addresses from last DX season to send out the Summary. If you got the weekly summary last year and your address hasn't changed, rest assured that I'll be sending it to you again this season! If, however, you want to be taken off the list or your address has been changed, please be sure to contact me!

73,

Lynn.

For Norway try 1313 AM or Medium Wave.

In Holland, where I live, 24 hrs a day.
During daytime rather weak signal, during night-time one of the
strongest on the dial.
1314 NRK programming is composed of the home services of NRK. News on
top of the hour.

Several have said that they don't want to listen to that audio for long
intervals...period.

Hah...I remember when we used to debate whether Mini-Disc audio was
acceptable or not!

I guess it depends on your priorities. Last week I was behind a woman who bought a single pack of cigarettes in New York for $7.50 (the tax just went up a whopping $1.50 per pack over what it was) . If she smokes 2 packs a day that comes to $450 in a 30 day month.

A mixed drink at a bar can cost more than $5 at even the sleaziest dive.

Let's get out of new York and cut the prices in half. Our vices still cost a fortune and leave us with nothing but cancer or overactive bladders. Why is $10 a month so excessive?

I'll bet that $10 is literally a drop in the tank of a Lincoln Navigator. With satellite radio that $10 keeps on giving. No cancer and no extra flushing.

Rich

You are making a substantial assumption that the monthly charge is an obstacle. Maybe it is for some people, but not for anyone I know, including myself.

I have several problems with satellite radio. First and foremost, when it comes to music, almost no one seems to cover my tastes. Looking over the fare on both Sirius and XM, it would appear that this limitation extends to their efforts as well. Impressions of past successful radio formats may excite some nostalgia buffs or new listeners, but certainly not everyone.

Second problem: I don't want to replace my very excellent in-dash after-market radio/MiniDisc player. I certainly don't want some add-on device that hangs under the dash or in the glove compartment. And if the device's electrical entry into the audio system is via an FM modulator, then I have the same limitations on the audio currently present in my FM radio.

And while the loss of a few hundred bucks for hardware that could be made worthless in the blink of a bankruptcy filing would not present a major financial setback, I see no harm in waiting a couple of years to see if there is REALLY any daylight in either of these deals. In addition, it might provide some time to let the formats settle out.

I'm wondering how much you can play the same music over and over again before you have to shuffle it substantially.

> I'll bet that $10 is literally a drop in the tank of a Lincoln
> Navigator. With satellite radio that $10 keeps on giving. No cancer
> and no extra flushing.

If I could afford a Lincoln Navigator, I might feel the same way.

Have you ever seen the Potomac Instruments model that looks like an old Nems Clarke? I have one sitting on the shelf at my transmitter site.

I'm looking for a children's audio cassette that contains a collection of stories such as "The Gingerbread man" and "3 Billy Goat's Gruff." Several of the stories were narrated by Paul Wing. (I believe he had a radio series Paul Wing and his Magic Typewriter?)
My now-old children remember listening to these stories on car-trips 15-16 years ago and are interested in preserving them on CD for their children.
This was always my favorite collection, but it has completely disappeared.
I've tried internet searches, library searches, and am unable to find a suitable newsgroup to post the question. Since Wing was once on the radio this is kind of my last resort.
Yeah, I know. "Get a Life!"
Thanks,

The proof is in the reality. We are in a slow economy. Car dealers are
reporting brisk sales. The conclusion is inescapable.

Automobiles have resale value.

Some of them, anyhow.

Once you get up into the $30-50K range there are several brands that have
excellent resale value.

You can get a brand-new Mercedes for under $30K, actually.

It is all marketing. In the case of car financing, the finance company is
either a subsidiary of the car company, or there is a kickback structure. In
any event, the price of the money is encapsulated in the price of the car.
Besides, I'm told that a lot of high-end car sales are cash.

I actually agree with David about the sale of high-ticket goods in these uncertain times. The people that can afford these goods are not affected by Market fluctuations. The only thing I disagree with David and the XMophobes is their constant hyperbolizing of the subscription numbers. I'd like to see the real subscription figures, from someone other than an XM Stockholder, which David is, or the numerous XM employees who frequent the forum. I'd just like to see an independent source for these figures. To continue to post these inflated figures with no substantiation is a dis-service to consumers trying to make intelligent decisions. I tend to believe the Sirius numbers. They are believable. But XM just keeps inflating the figures everytime you read a post.

I do hope you can provide some independent sources for the subscription figures for XM and not turn this into a flame war against me for asking for them.

2363. Sirius vs. XM

Pre-1982, 1330 was the AM of KFAC, then classical on both channels.

540 in Tijuana, occasionally listenable in southern LA County, was classical
for a while, too.

Nope. In Kansas City, there's KXTR AM 1660, and north of San Diego,
another classical station on 1450.

Further to my earlier posting, we just bought a '99 Acura for my wife, and believe it or not, it surpasses the Taurus. There's a weak station in Orange, MA on 720 and it comes in well in the parking lot of my office in Beverly, MA. Beats the Taurus. Also gets all the major NYCers during the day (660, 710, 770, 1130). Only drawback: No AM Stereo.

Any other suggestions?

WSB AM broadcasts at a frequency of 750 kHz. The abbreviation mHz stands for "milli-hertz." Or did you mean MHz, which stands for "mega-hertz?" In the former case, you are off by a factor of 1,000,000. In the latter, you are off by a factor of 1000. Lower-case m stands for milli, lower-case k stands for kilo, and upper-case M stands for mega.

Most of the GM Delco radios are pretty good. The best one I've ever
heard is the unit in my '92 Eldorado, which also has AM Stereo. It's
an amazing DX'er. The radio is so good it helped sell me the car!

For a number of years, San Francisco had two full-time classical stations,
each simulcasting on AM and FM. It now has one on FM only.

Amateur Radio Newsline™ Report 1304 August 9th, 2002

Amateur Radio Newsline report number 1304 with a release date of Friday, August 9th 2002 to follow in 5-4-3-2-1.

The following is a QST. U.K. hams take to 5 MHz in a big experiment. Find out the details on Amateur Radio Newsline report number 1304 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: BIG UK 5MHZ EXPERIMENT

If you tune around 5 MHz and hear what sounds like ham radio QSO’s, your ears are not playing tricks. A major study of 5 MHz propagation has begun in Great Britain and some hams are already on the air. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--

The 5 Mhz experiment has begun. The Radio Society of Great Britain has announced that permission has been granted by the Ministry of Defence and the Radiocommunications Agency for the allocation of five spot frequencies in the range of 5250 to 5450kHz. The frequencies will be made avbailable in the form of a 3 kilohertz bandwidth channel by way of a Notice of Variation to the UK Amateur License. Because it is a controlled experiment applicants are required to report their findings and results to the RSGB.

The purpose of the experiment is to carry out propagation and antenna investigations aimed at improving the understanding of Near Zenithal Radiation or NVIS - Near Vertical-Incidence Skywave - communications via the ionosphere. The frequencies assigned are 5260, 5280, 5290, 5400 and 5405kHz. It’s expected that this experiment will run for about 4 years.

Jeramy Boot, G4NJH.

--

Here in the United States, Charles Harpole, K4VUD, one of the permitted operators of the American WA2XSY 5 MHz-band test stations invites U-K hams to contact him to set up a sked. The 5 point 260 MHz channel would be the best frequency for him. He is available for all times and days until the 20th of August and his e-mail is k4vud@hotmail.com (GB2RS)

**

ENFORCEMENT: FIVE LICENSES CANCELED BY FCC

Five hams who participated in a September 2001 testing session in Yucaipa California and who declined to be retested have lost their ham radio licenses. The FCC's Riley Hollingsworth says that in this case it was the VEC who brought the matter to his agency:

--
Hollingsworth: "Now the W5YI-VEC really did its homework on this one. They picked up some comments and complaints on an Internet News Group about the examination session; did a little homework and further research and found some very good reasons to refer the matter to us."
--

On April 30, the FCC wrote all five requiring them to re-take their Amateur Examinations before June 30th. All five failed to appear. Again the FCC's Riley Hollingsworth:

--
Hollingsworth: "Those licensees were Eddie Bartolome - Extra Class N6YAG of Los Angeles; Camito Lopez KG6GJC a Technician of Los Angeles; Marcial Rivas - General Class KG6HCP of Salem Oregon; Manuel M. Vega, KG6GSP - General class of Anaheim California and Marcelino Llanes, KG6HBR of Oxnard California."
--

Hollingsworth adds that the FCC is continuing its investigation of other examinations given by the Volunteer Examination team involved in the September 1st 2001 session in Yucaipa. Also that his office really appreciates the vigilance of the W5YI-VEC. (FCC, RAIN)

**

ENFORCEMENT: FCC MAY RETURN FORMER KV4FZ TO THE AIRWAVES

An ex-ham from the US Virgin Islands who was forced off the air a year and a half ago by the FCC may soon be back on, courtesy of the FCC. This as the agency indicates that it may act to reinstate the amateur license of Herbert L. Schoenbohm, the former KV4FZ. Amateur Radio Newsline's David Black, KB4KCH, has been following this story and has the latest:

--
Herbert L. Schoenbohm's name shows up a lot in FCC records. He's the former ham who used to hold the callsign KV4FZ. That was before he lost his license.

In December, 1992, Schoenbohm was convicted of fraudulently using a counterfeit access device to obtain long distance telephone service. He was sentenced to two months of house arrest, two years probation and fined $5000. That left the FCC feeling that a felony conviction disqualified Schoenbohm from continuing as a Commission Licensee.

Two years later, Schoenbohm filed with the Commission to renew his amateur radio license. The Commission answered -- but not with what he wanted to hear; instead, the FCC designated his application for a hearing. Two encounters took place--one in 1995, the other in '97. At that point, the Commission told Schoenbohm he should no longer be allowed to have an FCC license.

He was allowed to operate until he exhausted all avenues of appeal. That happened in October of 2000. In January, 2001, Schoenbohm ceased on-air operations.

Before leaving the airwaves, 'though, Schoenbohm vowed that he would one day return to the airwaves as a licensed radio amateur. That day may be soon--based on findings presented at an FCC Administrative Law hearing earlier this year.

The hearing was held to determine if Schoenbohm now meets the requirements to once again become a Commission license holder in the Amateur Radio Service. The finding is complex and covers nearly two dozen pages. But it appears that the government may be ready to give Schoenbohm a second chance as a licensed ham.

The Commission says in part there is sufficient evidence in the record to support a finding that Schoenbohm has rehabilitated himself. The Commission notes that -- based on the evidence --it appears unlikely he would engage in any future misconduct. The Commission's Enforcement Bureau Investigations and Hearings Division endorses Schoenbohm's return to the amateur radio airwaves.

Schoenbohm took and passed a new exam in March, 2001. But the Commission again threw in a delay, designating his application for a hearing on the basis of character issues. This is the application that an Administrative Law Judge has been reviewing. Now that the recommendations are in, the Administrative law judge could issue a final opinion and recommendation within the next few months. That means Herbert Schoenbohm could possible be on the air again sometime this year.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

In the end, it is going to be up to the Commission to make a final resolution as to whether or not the former KV4FZ returns to ham radio. Nobody can predict what that decision will be. And if he is permitted to return, will it be with his old KV4FZ call sign? (ARNewsline™ from FCC Publiic Files)

RESCUE RADIO: COMMUNICATIONS TECHNOLOGY HELPS SAVE KIDNAPPED GIRLS

Two kidnapped California teenagers are alive thanks in part to a newly developed law enforcement communications technology. Mert Garlick, N6AWE, has the details:

--
It happened on Thursday August 1st when two teenage girls from the Quartz Hill

area of Southern California were abducted at gunpoint. Using the newly established AMBER child abduction alert system, the names of the teens and a description of the car they were in was immediately distributed to law enforcement agencies and broadcast outlets statewide. Shortly thereafter the California Transportation Authority was displaying information on it’s 316 electronic signs on freeways.

Sheriff's deputies in Kern County soon received several calls from people who saw the white Ford S-U-V. A sheriff's helicopter crew used the information to direct a ground unit that made the felony arrest stop. When he resisted and brandished a weapon, deputies shot and killed Roy Dean Ratliff and freed the girls.

The rescue took place only six days after Governor Gray Davis directed the installation of the AMBER system. AMBER uses a combination of two-way radio, fax, e-mail and other communications technology to quickly spread word when a child is abducted. It is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996.

In this latest case it took less than 4 hours to get the AMBER alert on the two missing girls circulated to the road signs. California’s Governor Davis says that his states AMBER system will now be refined to make it react more swiftly.

For the Amateur Radio Newsline, Mert Garlick, N6AWE.
--

Today, there are forty-one AMBER Alert programs across the country. The system is credited with safely recovering at least seventeen children since 1997. (Published news reports)

**

ENFORCEMENT: PLEASE FIX THE INTERFERENCE

A pair of utility companies have received letters from the FCC regarding unresolved interference complaints from area amateurs. According to the W5YI Report Lakeland Electric Company in Florida and Commonwealth Edison in Illinois both were sent notes reminding them of their responsibilities to prevent interference to radio stations including radio amateurs. The letters gave the electric companies 90 days to either resolve the problems or contact the FCC with a specific timetable for making the fix. (FCC from W5YI Report)

**

HAM RADIO POLITICS: NEW DIRECTORS FOR THE NFCC

Turning to the ham radio political arena, word that Ken Chilton, KA1TIH; Alex Harvilchuck, N3NMN and Vincent Bardsley, KB3OM have been elected to the Board of Directors of the National Frequency Coordination Council. They replace outgoing Directors Dick Isely, W9GIG, Owen Wormser, K6LEW, and Dave Baughn, KX4I, who helped form the NFCC at a meeting in St. Charles Missouri back in 1995.

Chilton, Havilchuck and Bardsley also join Nels Harvey, WA9JOB and Clay Freinwald, K7CR as the duly constituted National Frequency Coordinators' Board. This for the twelve month period starting on September 1st. (ARNewsline™)

**

HAM RADIO POLITICS: NEW SACRAMENTO SM IS OLD SACRAMENTO SM

California’s former Sacramento Valley ARRL Section Manager has become the new Sacramento Valley Section Manager following the resignation of the current Sacramento Valley Section Manager. Confused? Well, here’s what happened.

According to an ARRL Bulletin, Jettie Hill, W6RFF, of Roseville, California, has been appointed to succeed Jerry Boyd, K6BZ, as the Sacramento Valley Section Manager. This is because Boyd is moving out of the section.

Boyd was appointed in 2000 to replace Hill. Hill continued to serve the section as the regions Affiliated Club Coordinator and as an Official Relay Station. W6RFF previously served as Santa Clara Valley Section Communications Manager from 1978 until 1982 and as ARRL Pacific Division Vice Director in 1982 and 1983. The appointment of Hill, who had previously served for more than 10 years as Sacramento Valley S-M became effective on August 1st. Got that? (ARRL)

**

FUTURE TECHNOLOGY: HIGH TECH WORKERS NEEDED

Still in California, word that lack of qualified workers is costing Silicon Valley billions of dollars annually. The management consulting firm A.T. Kearney says that this is threatening the regions position as a global high technology center. The region's shortage of high-tech workers means that one in three jobs requires special recruitment efforts, or goes unfilled, leading to a loss of over $3 billion a year. (ProPeople.com)

**

RADIO REGULATIONS: PERMANENT CELL NUMBERS ON HOLD

Mobile phone users who want to keep their numbers after switching wireless companies will have to wait until late next year for that option. This after the Federal Communications Commission gives cellular phone companies until November of 2003 to offer customers the choice.

The new date, one year later than the previous deadline to implement the service. It is the third extension granted by the FCC. Most wireless companies oppose the idea, arguing it would cost billions of dollars and drain resources needed to improve and lower the cost of wireless services. (FCC)

**

WITH THE HANDI-HAMS: EXTRA CLASS MANUAL IN AUDIO

The Handi-Hams have announced that the latest ARRL Extra Class License Manual is now available to it’s blind members in adapted audio format. At the present time Handi Hams only digital media available but the audio is being

re-mastered onto tape. When the cassette version is available Handi Hams will let us know so that we can let you know. Meantime keep an eye at Book and Tape Catalog area at www.handiham.org for updates. (Handi Hams)

THE SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

Its time for a report from the Amateur Radio Newsline Support Fund. Here's our Administrator -- Andy Jarema, N6TCQ:

--
There are two items to cover this week. I'll start with our poll regarding credit cards. Three weeks ago we asked those interested in supporting Amateur radio Newsline using a credit card to write the single word YES in the subject line of an e-mail and send it to us. We have tallied the results and there were only 17 who said yes. And of the 17, all but one said that only a Pay Pal account was acceptable to them.

Well, statistically speaking, you don't have to know how to do linear regression to know that 17 people out of the 10's of thousands who listen in each week is not a very good response. What it says is that 17 people have Pay Pal access and would use it to help support Amateur Radio Newsline. Even so, we looked into creating a Pay Pal service for those who wanted to use it. Without wasting a lot of time, suffice it to say that the costs involved versus the return would not warrant the expenditure. So at present the credit card issue is dead. For now at least, the Support Fund will remain as it always has. Just the P.O. Box where donations can be sent. Get a pencil and paper ready. I'll give it in a few moments.

The other item I want to touch on briefly is the current state of the checking account. Thanks to your generosity, we made it through June and July. What that means is the bills from May were paid in early June and those from June went out on schedule in July. Now it's early August. The July bills have come due, unfortunately at the same time that our folks are off to Huntsville, Alabama to present the 2002 Young Ham of the Year Award. So that you get a better understanding of the costs involved, I've done a rough breakdown.

First of all, our corporate underwriters Vertex Standard and C-Q Magazine cover almost all the costs of the young person selected for the award. They pay their airfare. They pay their lodging. Vertex-Standard provides an additional gift of Yaesu brand ham radio gear. C-Q treats the winner to a week at Spacecamp. When you add that up, it's probably a gift package with a retail price tag of close to $5000.

Obviously, they do their part and we have to do ours. It costs about $300 a year for a round trip ticket to get one of our people from Los Angeles to Huntsville. Actually, we have our people fly to Birmingham and drive up to Huntsville because this saves quite a bit of money. Yes, it takes them out of their way and adds a few hours of travel time. But the savings in airfare make this added time worthwhile.

The wonderful folks at the Huntsville Hamfest provide us with a free room. We do have to pay our people's expenses like food, hotel, telephone service and a rental car when necessary. We also pay for the plaque presented to the winner and for the mini-banquet we hold for him or her on the Friday night prior to the actual Saturday presentation. The total this year will be somewhere between $1000 to $1100. So we need to raise that in addition to our normal $800 to $1000 it costs monthly to keep the Amateur Radio Newsline newscasts coming your way. And that's where you come in.

Amateur Radio Newsline is a federal 501 (C) (3) not for profit corporation. Donations to it are tax deductible. The address – you've heard it before - is Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

OK. 'Nuf said. But I'll be back next week with the latest thank-you list. For now, from Arcadia, in sunny Southern California's San Gabriel Valley, I'm Andy Jarema, N6TCQ.
--

If you missed the address given by Andy it will repeated at the end of this weeks newscast. (Newsline Support Fund)

HAM RADIO IN SPACE: KD5MDT REPLACES KC5FVF ON ISS EXPEDITION 6 CREW

Astronaut Don Pettit, KD5MDT, has been named to replace Don Thomas, KC5FVF, as a member of the Expedition 6 International Space Station crew. According to the ARRL Letter, Pettit had been training as backup flight engineer for the increment six team and was ready to step in.

NASA said the reassignment resulted from a medical issue that affects Thomas' long-duration space flight qualifications. According to Astronaut Office Chief Charlie Precourt, KB5YSQ, the demanding nature of long-term space flight requires a conservative approach to crew health issues, especially this early in the program. Pettit will join Expedition 6 Commander Kenneth Bowersox, KD5JBP, and Russian cosmonaut Nikolai Budarin, RV3DB. (ARRL Letter)

**

HAM RADIO IN SPACE: THE METEORS ARE COMING

Weak Signal operators -- listen up. The Perseid meteors are on their way.

Lee Wical, KH6BZF, says over the QCWA remailer that from midnight to dawn, on Monday August 12th and Tuesday August 13th about 60 to 70 meteors per hour will enter Earth's atmosphere. This particular meteor shower is created by the Earth passing through the debris field left from the Swift-Tuttle comet. The grain-like particles enter Earth's atmosphere, burn up and create what most

people call shooting stars.

The Perseid Meteor shower is not expected to be as spectacular as the Leonid Meteor shower that occurs each November. But, if viewing is good, people will not be disappointed. And if the ionized tails are good, ham radio meteor scatter D-Xers and WSJT users will be happy as well. (KH6BZF)

**

INTERNATIONAL - UK: LONG WAVE GOODBYE

As predicted by Media Network, the loss-making sports station TEAMtalk 252, which broadcast to the UK on 252 kHz Long Wave from a transmitter in Ireland, has closed down. This, after less than 6 months on the air. The station ceased broadcasting at 1300 UTC on July 31st. (Media Network)

**

INTERNATIONAL-CANADA: NEW RAC QUEBEC SM

Claude Paquet, VE2OCP has been elected as Radio Amateurs of Canada Section Manager for Quebec. This, for a two year term that will begin on November 1st. Paquet ran unopposed, eliminating the need for a balloted election. He has also agreed to complete the term of Richard Desaulniers, VE2DX who resigned for personal and professional reasons on August 1st. (RAC)

**

DX

In D-X, G0TQJ he has now gone QRT from Afghanistan where he operate slash YA. During his say in Kabul Chris made 1950 QSOs on SSB and another 850 on RTTY. He is getting his QSL cards printed. He has also sent his documentation to the ARRL DXCC desk for approval. (GB2RS)

And the FISTS newsletter reports on the apparent pirating of callsign ZD7CW. The pirate is using CW and not very active. In fact, he was last heard in November of 2001. But the real ZD7CW has been inactive for several years. (Q-News)

**

THAT FINAL ITEM: A TRUE CAPTIVE AUDIENCE!

And finally this week the story of an interesting call sign operating from a rather unusual place in Ireland. Here’s Q-News Graham Kemp, VK4BB;

--
>From our files, the story of a captive audience. A permanent amateur Radio Station with the call sign EI0CRM -- you heard right -- C-R-M -- “crim” -- EI0CRM is being set up in of all places the radio museum of the Cork City jail.

Cork City jail opened for business in 1824 and was used as a prison until 1923. When Radio Erin was expanding in the mid 1920’s, it was located in this jail. Its call sign was 6CK.

The broadcasting studio is now fully restored and a fine display of radio artifacts are on permanent display. Have a listen out for EI0CRM
--

Talk about a QSL card that you may want to keep under lock and key. (Q-News)

Not true. At this point in time XM will do a better job because they have more repeaters. While Siruis may not need as many, they still lack what they do need. But, they are new and that should change at some point. As for the commercials, Sirius has them too. They are in the form of DJ talk.To me commercial free means no talk, just music.

Goto each site(www.xmradio.com and www.sirius.com) and check out the channels. You can sample either provider's channels and see if they interest you. That is the only way to be sure.

That's a very personal definition. In the industry, commercial means content that sells a product or service for which an advertiser pays.

I doubt many of us consider news to be commercial (except for the spot in the newscast) nor do we consider "Prairie Home Companion" to be commercial (unless the commercial parodies qualify as commercial).

Many people enjoy some DJ talk to add a human dimension to some shows. Interviews with artists often add a lot to niche formats where listeners are unlikely to know much about the music. Mainstream formats don't need yet another riveting chat with Brittany or Madonna. We've been bored with all that before.

It would be better to define your personal preference as "talk free."

Rich

LOL!!

In that part of the country, where ground conductivity is around 30, 1 kw on
1450 can actully cover a metro pretty well. Not great in zones of RFI, but
certainly adequate.

My rather outdated "M Street Directoty" lists 181 broadcasters on
1450, and that's ONLY in the USA. No telling how many more are in
Canada or Mexico. It also lists Burney, Escondido, and Palm Springs.
With that many stationa creating a grumble and howl on the frequency,
and considering that a good classical station needs good dynamic
range, it's a waste of effort no matter what the Ground conductivity
might happen to be.

2386. About Antennas in 88-108 Band ... 2 or 4 Antennas ? what's the best ?

Newsgroup: rec.radio.broadcasting
Date: 2002-08-12 18:48:33 UTC
From: Fr&#65533;d&#65533;ric V&#65533;lu <radio-galaxie@wanadoo.fr>
Message-ID: <aj8vu1qoq1@xuxa.iecc.com>
Source record: 10247

Hi all,

I am the CEO of 2 non profit radios in France and one is changing it's broadcasting situation :

Although we'are only moving that site of 1000 meters the antennas will be higher of 50 meters...
(in fact before we were on the side of the hill and now we will be on the top of the hill)

The transmitter Power is 1000 Watts HT, and actually we've got 4 antennas in phase...
(that's about 4000 Watts that leave our antennas !)
but the quality and the coverage where we can be heard is not enormous ... about 30 Kms, there
i must say that our antennas are actually 100 meters high and the field around is sometimes
higer than 100 meters ... (104-105 meter ground !)
That's why the quality and the coverage is not good, in fact our antennas were not high enough.

So on the future site we will have our antennas at 150 meters High !! Ouch fine for us ...
and the ground elsewhere is generally between 80 and 110 meters ...

Mys question is : Is it better to keep a 4 antennas in phase (generally 6 db in gain when all is ok)
or do i have to choose that new all in one 2 Antennas in phase (Thomcast or ITAS) that
annonce 5 db minimum ...

Hummm , What's the best ?

What kind of Antenna system will give me the best coverage with 1000 W leaving the transmitter ?

If someone can help ... Leave message in this newsgroup...

Thanks for ur help...

Fr&#65533;d.

Twelve antennas in phase would be nice.

That must be a 4-element, full-wave-spaced antenna array (the custom in the U.S. is to regard the elements not as separate antennas but as parts of a single antenna). If you're getting that much gain, you must be running purely horizontal or purely vertical polarization. In the U.S. it is usual to run circular polarization, which is a particular combination of horizontal and vertical polarization. This reduces the antenna gain but greatly improves reception on mobile receivers such as those in automobiles.

The best antenna, I think, consists of four to six elements spaced 1/2 wavelength apart. One of our stations uses a 6-element antenna with 1/2-wave spacing. It is fed with 3,700 watts from the transmitter, and the antenna gain yields an effective radiated power of 6,000 watts. The signal has to contend with a number of hills, but reception is generally very good even on mobile radios.

They aren't programming classical in the daytime, except for one music-and-talk hour called "Soundcheck" at 2 p.m. Classical is still heard after 7 p.m. through overnights every night.

WNYC was supposedly talking to the NYC Board of Education about buying WNYE and moving classical programming to that station (especially when 'NYC was using 'NYE's frequency for a while after 9/11--yes, 'NYC was on the World Trade Center). Nothing has come of that yet.

Needless to say, there's a web site calling for restoration of classical music on 'NYC--www.savewnyc.org.

A correction. I confused the reference to Kansas City with the 1450
frequency.

The Escondido signal is more than adequate to cover the N. San Diego area it
is licensed to; the Palm Springs station does not even get to Palm Desert, 8
miles away, but that is some of the most horrible land in the entire USA.
Escondido, on the other hand, is a reasonable North County signal.

>The transmitter Power is 1000 Watts HT, and actually we've got 4 antennas in
>phase...
>(that's about 4000 Watts that leave our antennas !)

That must be a 4-element, full-wave-spaced antenna array (the custom in the U.S. is to regard the elements not as separate antennas but as parts of a single antenna). If you're getting that much gain, you must be running purely horizontal or purely vertical polarization. In the U.S. it is usual to run circular polarization, which is a particular combination of horizontal and vertical polarization. This reduces the antenna gain but greatly improves reception on mobile receivers such as those in automobiles.

The best antenna, I think, consists of four to six elements spaced 1/2 wavelength apart. One of our stations uses a 6-element antenna with 1/2-wave spacing. It is fed with 3,700 watts from the transmitter, and the antenna gain yields an effective radiated power of 6,000 watts. The signal has to contend with a number of hills, but reception is generally very good even on mobile radios.

Well, if we want to go that route, then technically, on XM, what people are calling commercials are nothing more than a quick 5 second spot by XM themselves, telling you what station you are on and what it plays. That really isn't a commercial, since it is not designed to sell product, just inform the listener what station they are on.

Sure, some XM stations have commercials because they are live feeds of broadcast stations and most talk stations do, but I have yet to hear any true "commercials" on XM music stations(other than the live feeds), just the channel info spots.

I've heard plenty of spots on XM but not nearly the quantity per hour
one hears on most commercial stations.. I have no problem with an
occasional spot when the programming and the production of the spot is
compelling enough. There are also a few DMX style channels for people
who want that but myself, I like RADIO rather than "re-purposed
content."

Same thing has happened on Viacom-owned WODS Boston. Doowop content dropped from daily playlist; pre-Beatles specialty show canceled; Saturday night request show, on which listeners could still hear pre-Beatles music, replaced by canned '60s-70s party/disco/jammin' oldies show. A shame. My interest in rock 'n' roll started with the British invasion, but I've always enjoyed the raw energy of the performances that form the roots of the music.

Fortunately, we still have WDRC-FM Hartford here, which still plays three or four pre-Beatles songs an hour, takes plenty of requests for them on weekends (Sunday's "Sock Hop" show is excellent) and even on weeknights with DJ Jack Carney.

All of you in this area ought to be sure to tune in this weekend. They're starting to promote the "Tribute to Elvis Weekend" already, and since DRC already goes quite deep into the Presley archives, the 25th anniversary programming should be exceptional.

When KFAC (1330 AM) became available, Howard Kalmenson moved his
Spanish language programming there, because is has a better signal in
Pacoima, which has a large Latino population, giving up his operation
on 1300 (5 kw day, 1 kw nite,DA-2) in Pasadena. That station now has
Asian programming. (What happened? I inttended to post this at the end
of thread)==Ted Shireman

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

Actually, KWKW 1330 has a very bad day signal in the northern San Fernando Valley and no night signal there.

KWKW moved to 1330 because of the extensive coverage gains in the LA basin, mostly in the South-Central area where at night 1300 was deficient; they also gained the Long Beach area, a good part of the Hollywood/Echo Park/MacArthur Park area, too.

It was interesting to be at KWKW in the 70's went he offices were at 6767 Hollywood Blvd at Highland; went he night pattern kicked in, you could not hear the station at all!

Recently KWKW bought the 1220 license in Pomona and is simulcasting KWKW on what is now KWKU. That added the Eastern San Gabriel Valley to the coverage. They now need to find some way to cover Orange County better, a and to get a consistent signal into the San Fernando Valley.

Hello to you all!

Just to let the world know that I've launched my own Internet only radio station - MOJO RADiO UK - www.mojoradio.co.uk

It plays the best music from the UK Top 40, club and exclusive mixes, plus the best music from the past three decades.
We're also looking for unsigned artists to send us MP3's of their songs and anyone who has a show they want to broadcast on our station.

Feel free to drop by and listen.

Cheers!

2406. Sirius Threatens Bankruptcy

Newsgroup: rec.radio.broadcasting
Date: 2002-08-15 01:18:42 UTC
From: John Higdon <no-spam@amadeus.kome.com>
Message-ID: <ajevhi$l00$1@xuxa.iecc.com>
Source record: 10168

According to an item on a local station's market news today, Sirius, after only six weeks of operation, is indicating it may need to seek bankruptcy protection due to slow signups of new subscribers.

No matter how you slice it, that indicates a lack of robustness in terms of startup resources. I'm seeing no evidence that satellite radio is the next "DVD" in terms of a killer product that flies off the store shelves.

Apparently, Sirius' business plan didn't take into account very much consumer resistence.

Geez, they could buy 1260 in San Fernando if they cared.

But you never answered my info about 1450... What a waste of classical music!

$30 million in advertising, $70,000 in revenue in Q2. Yeah, that's probably
a bankruptcy.

Very unlikely that Sol would sell that station, which has now moved to
Beverly Hills anyway.
>

> But you never answered my info about 1450... What a waste of classical music!

What question? If the station makes money, what is wrong with it? It provides a service of sorts that is not generally available in the market's northern parts. XHLNC can not be heard m;uch past Solana Beach, if that, so there could be justification.

2413. WTNT and WWRC Washington Livew Streams

Newsgroup: rec.radio.broadcasting

If your ceiling isn't at least $100 then you're absolutely right.

I got a JK audio patch on eBay for about $120 not too long ago.

Try an alternative to Gentner in your search.

I guess I shouldn't ask for an XM satellite radio for the car for
Christmas, unless my purchase would be considered "new financing".

Come on, isn't the public fed up enough with commercial radio to feed
both XM and Sirius with lots of money?

Looks like both of them has a business plan (and capitalization) that absolutely requires explosive demand. There was no provision to hang in there and "grow" the market. I cannot imagine that there are too many people now who would like to spend hundreds of dollars gambling that either service won't fold in a year.

Not being a rich person, I think I'll wait for some solid economic performance (not more financing) before throwing three or four hundred dollars at the venture.

Obviously not. Both firms are running short of cash, according to
their SEC filings. Sirius has cut its subscriber projections in half,
issued a warning of possible bankruptcy, and its stock price is
collapsing.

XM? I thought they'd already secured new financing. Or do you mean
Sirius? Either way I wouldn't be terribly surprised. A scam is a scam
is a scam! If the radios aren't selling, they're not signing up new
subscribers and they're doomed to fail.

And that's the problem. I don't mind shelling out $150 for the
receiver and another $60-100 to set it up. The question is which one
do I buy?

I was close to doing Sirius and now I hear this stuff. I said 3
months ago that maybe I'd just wait until one or the other shakes out.

Good answer, Carl :-)

I still cant find that on AP's site. I did find this
http://wire.ap.org/?SLUG=WALL%2dSTREET on Echstar, and I also saw a blurb on
XO, but nothing on XM. Can you help here?

Tom

No. Too many other, cheaper alternatives to commercial radio, including
CD's.

It makes for good emotional copy, but quite frankly a lot of what's supposedly wrong with commercial radio is wrong (in spades) with the satellite services. Things like "cookie cutter formats", no local flavor or focus, and repetition haunt XM and Sirius...and you get to pay (and pay and pay) even after you buy the expensive specialized radio.

The services are not the answer to everyone's prayers.

2430. Tribute Shows online at Rock-it Radio

Newsgroup: rec.radio.broadcasting
Date: 2002-08-16 12:50:21 UTC
From: rockitradio@aol.com
Message-ID: <ajised$k8f$1@xuxa.iecc.com>
Source record: 10194

Hello again everyone,

We have 4 new shows in the Rock-it Radio Archives, They are shows #506, #507, #508 and #509. Shows #507 and #508 are special broadcasts of the King of Rock and Roll Elvis Presley, as it has been 25 years of his passing. And 2 other great Doo Wop Shows with Cool Bobby B and the Doo Wop Stop in show #506 and a special on Randy and the Rainbows with interviews and the music of the group in Rock-it Radio show #509 Dave Justice and the RadioActivE Gold show. Remember, you can download these shows in our archives page at:
http://www.palmsradio.com/rockittext.htm
and click to the show you wish to listen to.
The shows stay in our archives for approximately 10 to 14 days. When a new show comes online at Rock-it Radio it takes the oldest one out. Here are the playlists of our
four latest shows online.
==========
Cool Bobby B and the Doo Wop Stop in Show #506.
This week's Doo Wop Stop with Cool Bobby B is currently in our archives in show #506. Here is the playlist.

1. Peanuts -- Little Joe and the Thrillers
2. Church Bells may ring -- The Willows
3. Follow the Rock -- The Bay Bops
4. Tell me why -- The Belmonts
5. Itchy Twitchy feeling -- The Swallows
6. Witch Doctor -- Frankie and the Fashions
7. Merry Go Round -- Marv Johnson
8. Till Then -- The Classics
9. Darling Can't you tell -- The Clusters
10. When we get married -- The Dreamlovers
11. Heebie Jeebies -- Little Richard
12. Nite Owl -- Tony Allen
13. While Walking -- The Fabulairs
14. Don't Leave me baby -- The Camelots
15. A Casual Look -- Six Teens
16. Today's the day -- Maureen Grey
17. Remember then -- The Earls
18. Please say you want me -- The Schoolboys
19. Walking along -- The Solitaires
20. Could this be magic -- The Dubs
21. I know I know -- Pookie Hudson
22. My Summer Love -- Ruby & The Romantics
23. Since I don't have you -- The Skyliners
24. Teenager's Dream -- The Kodaks
25. Just a lonely clown -- Huey Smith & The Clowns

26. One summer Night -- The Danleers
27. Felicia -- Bobby & The Orbits

If you wish to drop Cool Bobby B an E Mail you can at:
Coolbobbyb@doowopstop.com
And tell him you heard him on Rock-it Radio.
==========

On Rock-it Radio show #507

In Rock-it Radio show #507 Rockin' Robin from Essex, UK
does a special tribute of the King. Here is the playlist.
All performed by Elvis Presley. As tomorrow will be the 25th year of his
passing.

1. Heartbreak Hotel
2. Hound Dog
3. Teddy Bear
4. Blue Suede Shoes
5. Tootie Fruity
6. Lawdy Miss Clawdy
7. I gotta woman
8. Ready Teddy
9. Shake, Rattle and Roll
10. Rip it up
11. Long Tall Sally
12. Mean women blues
13. Gotta lot of livin to do
14. Hot Dog
15. Party
16. Jailhouse Rock
17. Don't be cruel
18. All shook up
19. Big Hunk of love
20. I need your love tonight
21. Paralyzed
22. I got stung
23. King Creole

If you would like to send e mail to Rockin' Robin out there in the UK you can
at: levenebuddyholly@aol.com
And Robin it's good to see you are back and feeling better!!!
==========
Another Tribute to the King in Rock-it Radio show #508

Al "Cool Daddy" Smith from Brampton, Ontario Canada
has also done a tribute to Elvis this week on Rock-it Radio. Besides Elvis --
Al also pays tribute to Rosco Gordon, Sharon Sheely and Alan Lomax. All whom
contributed greatly to the music scene of the 50s and early 60s who have also
passed on recently. Here is the playlist.

1. Death of Elvis (News Broadcast from Memphis) 1977
2. Peace in the Valley -- Elvis Presley 1957
3. Reconsider baby -- Elvis Presley 1960
4. No more Doggin' -- Rosco Gordon 1952
5. I don't like it -- Rosco Gordon 1957
6. If you want your woman -- Rosco Gordon 1957
7. Poor little fool -- Rick Nelson 1958
8. Gloomy Sunday -- Rick Nelson 1959
9. The girl of my best friend -- Elvis Presley 1960
10. Dirty Dirty feeling -- Elvis Presley 1960
11. Thrill of your love -- Elvis Presley 1960
12. Wang Wang Blues -- The Fireballs 1960
13. Almost Paradise -- The Fireballs 1960
14. Nadine -- The Coronets 1952
15. Sincerely -- The Moonglows 1954
16. Blue Moon of Kentucky -- Elvis Presley 1954
17. Willy and the Hand Jive '85 -- Johnny Otis 1985
18. Rollin' Stone -- Muddy Waters 1950
19. Hoochie Coochie -- Muddy Waters 1950
20. Shoobie Oobie -- Rosco Gordon 1957
21. Sally Jo -- Rosco Gordon 1958
22. My baby left me -- Elvis Presley 1956
23. Gently -- Elvis Presley 1961
24. Starting today -- Elvis Presley 1961
25. You'll be gone -- Elvis Presley 1962
26. Please don't drag that string around -- Elvis Presley 1963
27. Devil in Disguise -- Elvis Presley 1963
28. Death of Elvis -- 1977
29. Long Black Limouine -- Elvis Presley 1969

If you would like to E Mail Al with comments etc. on this show you can at:

RadioActivE Gold with Tribute to Randy & The Rainbows in
Rock-it Radio show #509

Dave Justice and RadioActivE Gold's show this week on Rock-it Radio features the usual mix of oldies and also in the second half of the show features interviews with the band members and the story behind Randy and the Rainbows. One of the last successful Doo Wop groups during a period when Doo Wop was being replaced by the Fab 4 and the British Invasion... Hear there story on Rock-it Radio and RadioActivE Gold. Here is the playlist.

1. That is Rock and Roll -- The Coasters
2. I need love -- Barbara Mason
3. Goodnight my love -- Lenny Welch
4. Oh my Angel -- Bertha Tillman
5. My Baby -- The Temptations
6. Wishing for your love -- The Voxpoppers
7. Along came Jones -- The Coasters
8. Once upon a time -- Hal Bobbie

9. Say you're mine -- The Blan Dells
10. Please write -- The Tokens
11. Popcicle -- Jan and Dean
*** Part II -- With Interviews with Vinny Carella and Mike Zero of Randy and the Rainbows.
12. Denise -- Randy & The Rainbows
13. Why do kids grow up -- Randy & The Rainbows
14. She's my angel -- Randy & The Rainbows
15. Debbie -- Randy & The Rainbows
16. Angela, My Angela -- Randy & The Rainbows
17. Denise (2002) -- Randy & The Rainbows
18. Still in love with you -- Randy & The Rainbows
19. Ain't she pretty -- Randy & The Rainbows
20. Silver and gold -- Randy & The Rainbows

Dave passes along his thanks to the Rock-it Radio listeners that have sent in there musical requests to RadioActivE Gold and says keep them coming at: Radioactivegold@hotmail.com
==========
==========
The Story behind Randy and the Rainbows -- (via the RadioActivE Gold Website) http://www.radioactivegold.com

In 1962 Mike Zero and his brother Sal emigrated from the Borough of Brooklyn, NY to Maspeth Queens. Both were lovers of music and especially the vocal group sound and soon found themselves forming a group with 3 other friends in the neighborhood. Meanwhile, Neil Levenson, a classically trained pianist and fledgling songwriter was beginning his career as a writer of popular songs. A chance meeting and songwriting lesson with Paul Anka at a Catskill Mountain resort gave Neil all the inspiration he needed. He wrote a song called "Pretty Girl", and after meeting a girl at the beach named Denise LeFrak, Neil changed the song title to her name.
He then met The Tokens, recording stars in their own right, who were also producing commercial jingles and records for other artists. Neil told them he had a great song and the Tokens urged him to find a group to do it. Mutual friends put Neil in touch with a group they knew of in Maspeth, and the journey began. He took Mike and his group to The Tokens, where they re-arranged the song and ultimately recorded the group at Allegro Sound Studios, in NYC. The Tokens took the master to Laurie Records who changed the group's name from The Encores to Randy & The Rainbows and released the song on their Rust Records label around the spring of 1963. By summer, "Denise" was a national top 10 hit and the group began working and touring with great acts like The Four Seasons, Dionne Warwick, The Beach Boys, The Drifters, Stevie Wonder, Gene Pitney, The Searchers, The Miracles and many more.
In the fall of 1963, with the group riding high and their follow-up record "Why Do Kids Grow" up showing much promise in it's first weeks of release, things were abruptly halted. President Kennedy's assassination placed a pall over the country, and the music business was no exception. Radio playlists were suspended and records consequently died a sudden death. But there was other news on the horizon. Rumblings from overseas told of a group from England who would soon be heard from and change the course of music forever.

While the Beatles made their mark in the US in early 1964, many groups including Randy & The Rainbows continued their recording careers. Their latest recorded effort, "PLAY BALL" demonstates why the group continues to be a force in the new millennium, whether it be on stage or in the recording studio.

Join ‘Randy & The Rainbows’ members Mike Zero and Vinnie Carella, when they step into the Artist Spotlight with Dave Justice on the August 17th edition of RadioActivE Gold. (Rock-it Radio show #509) You’ll hear the ‘old’ and the ‘new’ from the ‘Randy & The Rainbows’, August 17th on RadioActive Gold.

> unless it secures new financing.

This is AP picking up a Reuters story which ran a few days ago.

These are sensationalist press reports and not ___news___. They are
preying on the concern caused by bankruptcy reorganizations of some major
corporations.

As in the case of many startup companies, Sirius and XM didn't initially
raise all the money they need to cover all their losses until
their projected break-even dates.

In which case they are __required__ to insert a "continuing operation
warning" in their SEC filings noting this fact. They have been doing so for
a long time.

Now some "journalist" discovers these warnings and plays them up as
__breaking news__, while they have in fact existed for a long time. This
"journalist" was at the Reuters news service. One would hope for better
from them. Sirius has retorted pointing out how irresonsible the story was.
Sirius stock went up 83% on Thursday after being beaten down on Tues & Wed.

Will Sirius / XM be able to raise the additional money as required? IMO, it
almost entirely depends on how well the availability of their radios in the
2003 cars goes over. If the radios in 2003 cars are selling well, money
sources will have more confidence that sat broadcasting will succeed.

Right now XM is way ahead of Sirius in subscriptions, over 20 times as many,
but XM has been selling longer. Also, my calculations indicate that XM has
been gaining subscriptions about 7 times as fast as Sirius in recent months.
Sirius has been hobbled by the fact that their chip set has been in very
short supply. They claim that this problem is solved.

Even though XM subscriptions may have been meeting projections, and Sirius's
couldn't be, I suspect that the money folks realize that the success of both
systems depends on sales with new cars. The radios will start being

"standard options" only with the 2003 cars.

Visteon, the supplier spun out of Ford, has announced that they will have a dual-standard XM/Sirius chip set available for 2004-model car radios. They are trying to sell it to as many radio manufacturers as possible.

Huge money has been put into sat radio, and more is needed. But put another way, the total investment in XM (or Sirius) would only buy 3 or 4 major market TV stations, or less than a dozen major market FMs. It may be a rather speculative investment, but you can see why some folks may be willing to take the risk.

Bob Carpenter

> is a scam!

A scam? Really? Keep in mind that a scam has a commonly accepted
definition. It is _criminal_ activity designed to defraud the unwary out of
their money, jewels, stocks, whatever. A poorly thought through business
plan is not a scam. An underestimating of the difficulties of developing a
market for one's product is not a scam. And so on. And on. So, assuming my
definitions are pretty much on the money (a lawyer will tell you that they
are), how exactly do XM and/or Sirris qualify as "scams?" No doubt one or
two inquring minds would like to know.

Best,

Don

I hooked up the XM in my office, and it works fine.
The antenna is just sitting on my desk. The wire
is kinda long so it's all wrapped up in a coil next
to it, but it's getting the signal clearly.

And if you use the 'menu' you can set the volume
for the headphones. It's not as easy as turning
a knob, but at least I don't have speakers or
an earphone booster on me desk taking up space.

*-I heard there is another kind of satellite radio
*-by another company. What's the name of it?

>This is AP picking up a Reuters story which ran a few days ago.

These are sensationalist press reports and not ___news___.<

They are, in fact, both outright lies...and Reuters and AP have retracted all such stories about XM and Sirius.

I can find no such retractions on the AP wire. The broadcast wire ran
the story again today as part of its "Techminute" package. Here's a
link to the latest AP story available to non-members:

http://story.news.yahoo.com/news?tmpl=story&u=/ap/20020815/ap_on_hi_te/satellite_radio_5

And the Reuters link:

http://www.reuters.com/news_article.jhtml?type=search&StoryID=1336215

Notice that the Reuters story contains no retraction or corporate
denial of the original report which was based on SEC filings-- just
corporate spin on what they say the SEC filing really means. The next
Reuters story indicates S&P has placed Sirius on credit watch.

http://www.reuters.com/news_article.jhtml?type=search&StoryID=1340500

Bottom line: these companies could survive, but they are in shaky
condition and they might not.

Really! Who originated the stories and what was the motive?

I still think I'll give them both a couple of years to prove their viability
before I put MY money at risk.

They have both been making these REQUIRED warnings in their SEC filings for
quite some while. It's just that some naive reporter from Reuters, who
didn't understand financial stements, thought it was Big News - and then AP
stole the story and ran it as well.

Thanks.

I think I'm onto a basic digital Gentner at around $200 which is a
decent unit at it seems a fair price.

I found a Studer but have been warned away.

Everyone's shouting 'go digital'!

They say that re processing but I'm not convinced.

You must be kidding - they're making money? Again, classical music
requires a good "dynamic range". What sort of dynamic range can you
get on 1450 kHz with the constant "rumble/grumble" in the background?
There are at least 181 stations licensed to 1450 in the USA alone.
IMHO it's not a good choice.

Yeah, I work for one ISP and own another - and boy, would it be great if
we could provide service for free. :P *thwap*

I'm not above paying a few bucks a month for a service like XM or Sirius.

However, like many here, I'm not investing a dime until I can be sure they'll
be around for more than 24 hours.

You are dreaming in some mythical wonderland. When stations hold contests, they do so an a dedicated bank of lines, usually in what is known as a "choke network" to prevent general overload of the local public phone network. Calls that come in on other lines do not qualify for contest entry.

If any station ever set up a backdoor so that "special" people could enter a contest, the bust would be national news.

Stations do have "undisclosed other lines", usually referred to as "hot lines", but they are for the exclusive use of station personnel to call in regarding immediate station business. If you found out what they were and started calling them, the station would quickly change them.

I'm quite sure both companies did say they may go bankrupt if they don't get more money.

The fact is, both companies have spent tremendous sums of cash over the past decade just to get on the air. Auto makers and equipment manufacturers have spent many millions as well designing equipment to pick up the signals. Therefore it seems unlikely to me that with that much money invested by all those big companies they would just let the services go belly up.
I think it is far more likely that both XM and Sirius will get the money they need to stay afloat until they can star turning a profit.

Classical music recordings have a dynamic range of 70 dB or so, but our
experience is that if you preserve more than a fraction of thet dynamic
range in broadcasting it, you'll get lots of listener complaints about
having to adjust the volume control. They particularly don't like it
when a low ending is followed by an announcement at normal level.

We compress the dynamic range down to about 30 dB, and we're still
getting complaints.

Yes, but I remember Quadraphonic, I even owned a Marantz that was designed to pick it up. The format went nowhere. Also remember Ampex Mat machines, were supposed to replace carts, didn't happen. Just because the market research says it will work doesn't mean it will. Figures lie and liars figure. Big companies don't necessarily make decisions better or worse than you or I. In the end it is an educated guess, the "hot toy" folks only take you so far. Maybe people mainly listen to the radio just to get the weather.;-))

Still doesn't hide the fact that Sirius lost around 40 percent of its market cap last week, and was downgraded by at least three analysts (at least one with a 'dump' recommendation).

Hope none of you guys and gals lost a lot of money in it....

From: charles hobbs <chobbs@socal.rr.com>
Message-ID: <ajqopc$n30$1@xuxa.iecc.com>
Source record: 10120

Anyone else remember this?

"SatCon One", a series of simulated concerts (regular studio pop music, with added audience
sounds). played over the radio during a 12-hour period.

Supposedly, this was a concert originating from several cities in the US, Canada, Australia, Europe
and Russia. For example, the first two hours or so would "originate" from LA, then the next hour
from San Francisco, then New York and so on. Of course, dramatic tension (and a small bit
of Cold War commentary?) was provided by having "difficulties" receiving the Moscow portion
of the "transmission" until the very end, when they got through. (Lots of Billy Joel from "Moscow",
if I remember correctly..."

I have bits and pieces of it on tape....

Again, on 1450 kHz?

Offhand, I'd say you must have a rather unsophisticated audience.
Classical music is SUPPOSED to have a large dynamic range. You might
suggest that the presenters make the announcements at levels to better
match the music, too.

Your "legal" definition is all well and good, but to most people a "scam" is something designed to separate them from their hard-earned money without giving them anything (worthwhile) in return. The stock market could be a "scam" - look at Enron and Adelphia. Insurance is a "scam" - you bet against yourself and the company denies your claims. Social Security is a classic "scam" - in fact, it's a Ponzie Pyramid scheme, but since it's run by the government nobody complains.

In the case of satellite radio, you're "scammed" into buying a proprietary radio and paying forever; yet the radio will be worthless

if/when the companies fail. Sounds like a "scam" to me, whether it fits the so-called legal definition or not. They just haven't failed (yet) so nobody has detected the book cooking (crime) yet. And what do you wanna bet that if/when it fails the top executives don't lose a dime?

And when a respected radio engineer (John Higdon, one of the Big Three in this group) isn't singing their praises, then I'm in very good company. You can nit-pit all you want to.

The problem is that it makes a great background for offices and places like that. Unfortunately, most of the clock radios (and so on) don't have AGC on what they receive, so if you are expecting to wake up to Strauss at 6 am, and they happen to be playing a very quiet section, you won't hear it. So compression is a way of life. I did some recording for and a bit of consulting for a station in Florida (Safety Harbor in the Tampa Bay area). They got lots of complaints about sound levels when they had minimal compression, so they set it up so that at about 5am, they started compressing more, and about 7pm, they cranked it back down. Not a great solution, but it made the symphonic stuff in the evenings a lot more listenable. When people were waking up, it was compressed. While they were at work, it was compressed. At night? Close to wide open.

Now they were a true peanut whistle... only 2k ERP.. and barely got to Central Avenue in St Pete, but did cover most of Tampa. At one point while digging thru the Arbs at a Rocker I was writing software for, they had incredible numbers... Like as high as #3 in some day parts. Averaged about #5. (Way way way below the #s that Q105 had during morning and afternoon drives, but still very presentable even then, where they were #7 or thereabouts.) Demo's were the problem with them. They managed high numbers above 30, both male and female.. but advertisers wanted those teens.

The station found a 1 block area in Seminole that could allow them a significant facilities upgrade. Moved 2 channels over (from 92.1 to 92.5) ... and stuck up a taller tower... Ran the output up to 50k ERP, and could be heard as far as Sarasota. The ratings went up. Unfortunately, management changed. They were making money (even after interest payments!)... Right around a 20% ROI, but the new station manager wasn't "comfortable" with classical music, so he dumped it and went Oldies. That was really too bad... (He had been manager at a Beautiful Music station.. and hated classical music...)

Profits went through the floor, and the station got sold to one of the big conglomerates. They made a big profit selling the station, so stockholders were happy.. but the area lost a bit of character. Now they have yet another station playing the same old crap that everyone else plays. <sigh>

Did station ownership have to sign off on the format flip? If not, did the
manager get into any trouble for doing this?

Nit picking? I don't think so.

If to you, words mean whatever _you_ decide they mean regardless of what they mean to the rest of humanity, I imagine it'd very hard to carry on a meaningful conversation with you. It would be impossible to determine your meaning from your words.

But whatever the word "scam" means to you (and who cares?), it means "fraud" to people who understand the English language. Therefore, I'd be careful about casually suggesting that this business or that is a scam or that the owners are "cooking the books."

As for Sirius and XM, there is absolutely no evidence that either is a scam.

Regards,

DF

Anything 70 dB below 100% modulation will be inaudible in most listening
environments. Radio is not a concert hall.

in article ajqop2mvj1@xuxa.iecc.com, Ray Collins wrote:

> Yes, but I remember Quadraphonic, I even owned a Marantz that was designed
> to pick it up. The format went nowhere.

Quad was an attempt to generate a consumer demand for technologies that did not then yet exist. The concept was four speakers, but the means to supply them involved various matrix attempts and several discrete schemes...all of which were lame and flawed. But worst of all, quad heralded in the era of really cheap and sleazy audio gear. Compare your Marantz receiver with the truly fine gear that Saul Marantz sold in years previous.

Now, decades later, "quad" is commonplace in the form of 5.1 and 6.1 discrete digital formats. No hoopla; no fanfare. It just is and the public has embraced it. Anyone introducing a product that depends upon a radical shift in public preference and demand had better be prepared to hang in there for a very long haul. In the case of quad, literally a seed had to be planted. Then, much later, when enabling technology was solid, the principle took hold.

Satellite radio MIGHT catch on when and if (eventually) there becomes a universal standard (rather than competing standards) and the receivers become cheap, or the technology is simply built in to commonly available radios in general.

As to the presumption that since they have spent a lot of money setting up the system they just CAN'T let it fail: entrepreneurial history is littered with ventures that burned incredible amounts of initial and second wave capital but crashed and burned nevertheless. Come visit Silicon Valley and I'll show you around.

Well, actually the programming in question *is* on 1450 kHz, among other places on the dial, but since we don't own that station but only sell them our programming, I've no idea what they do for processing. I've a hunch their on-air dynamic range is a lot less than 30 dB, though.

Indeed. As someone who has set up processing for classical music time and time again, I can tell you that for casual listening, virtually no dynamic range at all is necessary for classical music broadcasting. If you are expecting wide dynamic range, go to a live concert or listen to CDs on a very expensive audio system. Don't expect it to come from a radio station because it won't, on either AM or FM.

San Francisco had not one but two AM stations playing classical music for many years.

The band is pretty full here in LA, so you'll probably have to wait
until someone else
wants to sell....

That said, "Broadcasting" magazine has ads of stations for sale, there
are perhaps others as well.

(An aside: Is 1500 kHz still open in LA? Last I heard, someone had a
construction permit, but
he ran into some environmental opposition to actually building anything)

But in each bankruptcy the remaining productive assets were conserved for the creditors, who would liquidate them for a fraction of their setup costs. Those assets can be patents, brands, contracts, equipment, real estate; they can also be satellite infrastructure and spectrum licenses. You don't watch the DuMont Network anymore but you still watch their stations. Sat radio's power is extraordinary; the assets may well fall under control of Viacom, Clear or Fox at a bargain price on the courthouse steps, but the medium will forever serve some retail audience at some price.

Jerome

You might go and subscribe to the RBR website (it used to be free) and look for a broker there. The last half-decent AM in LA went for $35 million (1650) and the last FM sold was $250 million (96.3). A class A FM might go in the $55 to $75 million range, though.

Mix 106.5 plays Supertramp here, or used to. They may have pushed it out
in favor of something else. A lot of late 80's and early 90's was on 107.9
when it was alt-rock. I've heard Loreena McKinnett on the air here, but only
the one hit she had (Mummer's Dance?) -- it's very hit and miss.

>Supertramp, no early Jefferson Airplane, no early Pig Floyd (sid barrett

Peanut whistle? Shoot.. I've heard of pirate stations with higher output from the transmitter, and taller towers.. (The 2k ERP output was from a tower only about 190 feet tall, right at the edge of Tampa Bay just north of Safety Harbor. The transmitter shack was up 20 feet in the air because of the possibility of hurricane flooding. Only 2 bays in their antenna, so I suspect the actual transmitter output was not a lot less than the 2k erp.

Don't know if the ownership group signed off on it or not. The new manager (who's name I don't remember) came in about 3 months before the format change. My impression was that he didn't understand the audience, and didn't know how to get the sales group motivated with their demographics. He also changed sales staff. (Both of them got fed up with him, as I understand it.) He -may- have had ownership buy off, but may not have. I don't know. The station was owned by a small group owner out of state. I think they had a total of 5 stations at the time, of which 4 were classical. Their flip dropped that to 3.

The prior manager said "they are committed to classical here"... and said they were quite happy with the profitability at the station. (Cheap to run.. get folk from the local university to run it at minimum wage..that sort of thing.) The only "highly paid" folk were the sales staff and management - one PD and one station manager/sales manager. And the PD and Manager weren't paid all that much. ($40K if I remember correctly.) - Labor of love, rather than labor for huge income.

The prior manager got hired away for much larger bucks by a station in the NE.. Boston, if I remember correctly.

Before the switch, they had a $0 promotion budget. They managed to get ratings without any promotion at all. Even after the facilities upgrade, their signal was small compared to the local university station. (Their antenna was at 800 or 900 feet on the TV tower shared by the two local educational TV stations, and had a full 100k erp.)

I suspect that promotion budget was a serious error.... If nothing else, it would have helped with sales. After the switch, they had a huge promotion budget to try to get an audience, and ended up having to actually hire folk that wanted an income. But were now hitting a much lower income demographic and in some dayparts had lower numbers than when they were classical. With a underwhelming signal, going for a niche format like classical is a good thing, if the area has the right sort of audience.

The sale may have been in the works already at that point.. It came about 1 year later, and the format swap may have been part of the deal. I don't know. Didn't hear anything while there. I moved out of that area about 2 months after the format change, and visited about a year later after the

ownership changed. The format swap occurred about 1 month after their license renewal. Suspect it got held back because they didn't want the folk with income screaming at the FCC.

Whether the station is profitable at this point? No idea. The churning in the Tampa market has been huge. What are the chances of resurrecting the station as a classical now? 0. Far too much debt, and the station prices have skyrocketed. The original owners put it on the air for about $400k to 500k. They ran it at a small profit, and turned it around in a sale for $1.8 or 2 million to the small group. (All the existing folk stayed except for the station manager and PD.) -- The small group had researched the facilities upgrade carefully before buying.. and it took them almost 3 years to push that through... Getting past the NIMBYs that didn't want a tower in their neighborhood took a lot of work. 2 years later, the format swap happened.

Oklahoma.......we have KMOD/KRXO (70's......but stuff like Linard
Skinnard/etc.../KATT (mostly 80's trailer trash heavy
metal.ACDC/OZZIE..etc..)........a new one called "The Buss" (they are a
ClearChannel - so I boycott listening to them, plus they will goto Rap soon
anyway I think) is more current rock, yet since new rock is truely dying
away........each day they play more Rap-rock/Rap ;-(.................I
loathe RAP totally!!!!!!!!!!!!

So radio is not listenable here............except KCSC (non-commercial
Classical ;-)......) the only good one out of around 30? stations
;-/............there is another station which plays "Hearts of
Space"........but that is at 5-AM!!!!! I'm sleeping at 5-AM!! ;-(.

Oh no :) :)
Not Ozzy.
That ain't trailer park trash metal.

GNR, Nirvana, MManson, and these groups that dress in bummed out clothes
and keep saying" whatever" is considered trailer trash metal.

I remember when "Autograph" had that 1 Hit Wonder called "Turn Up The Radio"
Very Positive Lyrics and no depressing attitudes back then either like it is
now.
I have LPs, Tapes, and some CDs with music that was bearable to listen to
compared to this mess they have now! It's not about entertaining the
fans.......It's only for the Money, these days.

Here are my chosen ones!
Ozzy is Pure Metal!!
AC/DC -Pure Metal..
YES - COOL
THE LAW (one hit wonder of 1991) had only ONE album. "The Law"
The Firm
Billy Squire - The Stroke
Iron Maiden - Run to the hills
Bullet Boys - Smooth Up In Ya!
Vinnie Moore - Great Instrumental Guitarist
Yngwie J. Malmsteen - Got most of his albums
Racer X - Street Lethal album (sounds like music in a "B"-movie.) Okay,
though.
MotorHead - Ace Of Spades
Vixen - On The Edge Of A Broken Heart - YEAH!!
Lita Ford - YEAHH!!!!
Missing Persons - Nobody Walks In L.A.
Nena - 99 Luft Balloons (99 Red Balloons) - YEAHH!!!
Carlos Santana - Shango / Freedom/ Spirits Dancing In The Flesh
Thomas Dolby - She Blinded Me With Science
Madness - Our House In The Middle Of The Street

Loreena McKennitt - Beautiful lady : I do have her "Book Of Secrets" and the
dance version of Mummers Dance. Love It!

Clannad - Irish band: Very Good Music.
Enya is Maire(Moya) Brennan's Sister and former member of Clannad.

Queen - YEAH!!!

I listen to the Planet here in Richmond, Va (WKLR - 96.5 FM)
They don't play much Ozzy -they do play only a few Black Sabbath songs.

XL-102 used to play Ozzy and Black Sabbath.

Q-94 used to play MECO back in the 70s
They did have a REALLY GOOD show called "The Q-ZOO In The Morning" until the 1990s.

But are there readily available formats that provide CD quality
sound for music?

CD quality means one and only one thing: If you feed the signals from
five 16 bit ADCs into the input end, then through the process to
get to the listener, those are the same bits that get sent to their
ADCs. And the sampling rate can be no less than 44.16 kHz for
each channel.

I do not know the answer to this question in general. Certainly,
the DD 5.1 sound available over broadcast TV is NOT anywhere near
that quality. Now 2.0 sound sent over OTA DTV can indeed be very
near indeed CD quality. And if not accompanying a picture, yes,
the ATSC standard certainly allows CD quality even for 5 channels,
even 10 channels!

But no one will ever build receivers for this.

Doug McDonald

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

>sound for music?

No, but that's not the point. The fact is that the DD and DTS formats are
selling
very well. They are perfectly viable technologies commercially; none of
the seventies quad stuff ever was.

If there is a demand for uncompressed, multi-channel material, the standard
exists. Unless there is a commercially viable demand by people who are
not satisfied with the compressed formats, it probably won't happen...purists'
desires notwithstanding.

Could some of you who are current with the industry comment
on the practicality of SCA to serve this type of market?

At one time, near the beginning, I think SCA was being touted
as a way to serve relatively small markets, and not just for
transmitting background music to offices. But I could be
mistaken, and the industry has changed quite a bit over the
years so that this may not be practical anymore.

Radio Tehran is a Farsi service by subscription serving Persians in the LA area via an SCA channel on KLVE; there is a Colombian service in New York, and many others. The quality is low due to restricted bandwidth and the rental is very expensive in larger markets. Then you have to buy lots of SCA receivers and rent them out and collect the fees. Add to that the growing resistance of stations to using their SCA channels for programming and you have a variety of impediments to this option.

XM is to mine. I bought it for NASCAR Radio, which is extremely well
done. But, to my surprise, I also found very well programmed decade
channels (for me, that's 70s and 80s) and much more. The comedy
channels are great. None of those are in *any* way duplicated by local
radio (which in my market has almost no local focus at all save some
sports and two bad right-wing talk shows). Ditto CNET.

I love the programming. Period. If it doesn't make it, that'll be a
real loss in my book.

2501. Dopey & Danthony may cost Infinity WNEW's license!

Newsgroup: rec.radio.broadcasting
Date: 2002-08-22 11:40:57 UTC
From: richcranus@yahoo.com
Message-ID: <ak2ik9$r4n$1@xuxa.iecc.com>
Source record: 10060

According to "News Wire Services", Dopey and Danthony pulled another dumb stunt and may wind up costing Infinity WNEW-FM's license. Two top executives (Vice President/General Mgr and Program Director) have been suspended already, and Dopey & Danthony's shows have been re-runs since last Thursday's show.

Seems they "broadcast a description of sexual intercourse supposedly taking place in St Patrick's Cathedral." The person describing the incident was arrested, as were the two supposedly having sex.

Needless to say, the Catholic Church was not ammused and has asked the FCC to revoke Infinity's license for WNEW-FM.

Dopey & Danthony were fired from Worcester's WAAF after reporting that Boston's mayor had been killed in a auto wreck. They then moved to NYC and WNEW-FM.

This is acceptable in today's commercial radio climate?? I certainly hope not!

They use SCA for very small markets, niche stuff like talking books for the blind, or
very small ethnic/foreign language groups. (example, an all-Ukranian broadcast....)

The problem w/SCA is obvious: a special receiver (or an adaptor of some sort) is required
to hear the broadcasts.

The US moral level has sunk to a new low if the FCC listens to the Catholic League of Decency. Where is the Catholic League of _In_decency on this? Will this be settled by gunfire or will we have to sit through a debate?

The point of the show I assume is to offend people who need to be offended, as seen by a twenty-something.

I'm not a listener myself but think it's a nice cut at the Catholic Church; no young boys were involved.

The management of WNEW as usual were weasels. Didn't Karmazan stand up to the FCC once for Stern? Maybe he will this time too.

Long long ago in a galaxy far far away. You don't need to pay attention to much of anything today. "Public interest, convenience and necessity"? Forget it. Making sure you're in compliance with the license specs? Nah. (AMs especially). Even the really really simple stuff like giving a clearly audible legal ID vaguely close to the top of the hour isn't done. The FCC is a joke. From there you can go into the massive numbers of move-ins from small towns to big cities, the failure of LPFM while the number of translators fed from thousands of miles away explodes, and all kinds of crap. Dopey and Tony are a small blip and they're fired anyway. With luck they'll end up sweeping the streets of Manhattan. That would be the only clean thing they've done in years. Good riddance.

Since when? I was inspected two years ago on a four-tower array. The inspection took two days. There were a couple of citations and a few advisories. Nothing serious, but it was clear that if there had been any real problems with meeting the license spec, there would have been some real sanctions.

As someone who is on the front line of FCC compliance matters, I'm going to have to disagree with you. It isn't as loose as all that.

Yes, and then we should let the Nazis march in and take over!

Seriously, Infinity Broadcasting is attempting to handle the situation in a responsible manner. Perhaps, they should have been more controlling over their on-air content in the past, however, they have taken matters into their own hands by releasing O&A and suspending two of their managers. There is certainly no need for the government to intervene.

It should be pointed out that the organization protesting was not the Catholic Church per se, but the Catholic League for Religious and Civil Rights, a right-leaning organization that has protested against what it considers "anti-Catholic" portrayals in the media (like reports of priests being child molesters). By and large, it's the type of organization that misses meatless Fridays, Latin masses and catechism that called Lutherans heathens. They are convinced that Viacom hates Catholics because Letterman has made jokes about the O&A incident, some "South Park" episodes and Showtime's TV-film version of the Christopher Durang satire "Sister Mary Ignatius Explains It All to You." In their narrow minds, the Catholic Church is as pure as the driven snow and should never be criticized at all.

Oh, yes--they put a pop-up on their home page that proclaims appearances today by their reps on Fox News Channel, Peter Jennings and "Extra." Sounds like a bunch of shameless self-promoters to me.

Now I have no sympathy with Opie & Anthony and am glad to see them in trouble again--God knows they deserve it (and I hope that Clear Channel won't hire them--through they probably will). But it bothers me to see a bunch of right-wing lunkheads take credit for it.

The practice of "public good and service and convienence" maybe. Or simply common decency perhaps. If you have to ask, I'm sorry for you.

I agree with you to some degree, John but I know of 4 or 5 AM stations in Central Indiana with directional arrays that are not even close to compliance, and I know of 1 station (1kw D 250 w N DA2) that has used it's daytime array/power for almost 3 years.
As for the law regarding legal ID's... I disagree totally with your assessment. All over America stations bury their legal ID between spots at :50, only to run a sweeper at the top of hour. 2 stations in my cluster do this and almost every station located in and serving a city other than the city-of-license hides the legal ID in the :50 stopset.
This violates the literal interpretation of the law as well as the spirit of the law, yet nobody has ever been cited (that I know of).
I know there are stations that still get the infamous (unannounced) visit from the FCC field officer, and those are grueling and thorough, but those visits are few and far-between and not nearly as frequent as they used to be.
I also know of many AM daytimers with low power night-time authorizations who frequently stay on high-power after sunset.
Tonight was a great example. Driving home from work I heard several stations who stayed on high power for coverage of high-school football games.
This has been going on for years. It has always been fun to listen to daytimers on clear-channels or regional frequencies who stay powered up for High School Sports.
I could name several stations who are in violation, including a daytimer on WKBW's frequency (or whatever their call letters are these days) 1520 khz that is on the air with full power right now broadcasting high-school football. I know they have to be causing interference with 'KB and they've been doing it for years on Friday nights, but nobody seems to care.

If nothing else, perhaps that there are still "limits" on what can be done on the air? Believe me, Infinity (and everyone else) would take notice.

However, there would be lawsuits filed immediately and the case would probably wind up in the Supreme Court, and Infinity would be allowed to continue broadcasting until a decision was finally rendered.

True; especially if it will cost the owner anything! And a shame, too.
Now all the stations have to do is make as much money as possible.

Making sure you're in compliance with the license specs? Nah.

Where did you hear that? Infinity is still carrying their re-runs, so
they certainly haven't been "fired". Not yet, anyhow. We can hope.

With luck
> they'll end up sweeping the streets of Manhattan. That would be the only
> clean thing they've done in years. Good riddance.

That, I can agree with. Maybe some real "community service" would do
them good. It would allow the Public to give them an earfull about
their stupid stunts. However, I think the NYC street-sweepers Union
might not like that idea.

"Releasing"? They were suspended (with pay) and their shows have been
re-runs since the incident.

The "Nazis" comment was uncalled-for. The FCC is charged with keeping
the broadcasting industry on a somewhat even keel; Infinity has been
pushing the envelope all along and deserves a slap or two.

I'm aware that the FCC no longer requires equal time (a tragedy) or
public service (an even greater tragedy), but when did they do away
with good taste on the air?

I'm not an engineer, and thus I don't have anecdotal evidence. I have read too many accounts in these newsgroups over the past 7 years or so from people I've come to believe and respect where such evidence is given. That said, I believe you also when you give your experience. Maybe there are a few people at the FCC who really do give a damn.

>As someone who is on the front line of FCC compliance matters, I'm going to
>have to disagree with you. It isn't as loose as all that.

I have to respectfully disagree with you here. Multiple stations over the last few years give the legal buried in the :40 stopset, whispered and said so fast that even though i *knew* what the calls were I still couldn't make those syllables out. You end up with something that sounds like "KF<mumble>" An even better example is one that I thought I mentioned recently. Station B98.7 in Salt Lake City has the callsign KBEE-FM. They also have a co-owned KBEE at 860AM. The legal for the FM is given as a simple "KBEE Salt Lake City". This has been going on for years, even with jingle packages changes. Either the FCC inspectors aren't listening to the station at all or they don't care.

The FCC certainly does give a damn as far as things like the public file
and EAS go. I understand that WBZ(AM), Boston just underwent a full
inspection by the Boston field office the other day.

But, you see, things like the public file and EAS don't really matter
in the grand scheme of things. Rarely does any member of the public
ever look at public file, and nobody but the FCC is ever going to care
if one doesn't have the latest edition of "The Public and Broadcasting"
on file.

Things that *do* matter -- like excessive concentration of media
control, the reduction of accessibility of the public airwaves to
the public, and the "public be damned" attitudes of licensees --
these the FCC [and Congress] don't care about.

>I have to respectfully disagree with you here. Multiple stations over the

Possibly the FCC recognizes what all the rest of the world knows... that
call letters are anachronistic and useless. People identify stations by
their names or slogans, not calls in most cases (and when they have same).
An unless there is a ruling to the contrary, maybe the commission does think
that "in the closest stopset" complies with the rule. And there is nothing
in the rule about the speed of the read, either.

The daytimers staying on late, DA's running non-D at night and such are
significant. Use of call letters a few minutes early or late.... or at
all... is not.

You may be correct about Dopey & Danthony having been "released". I heard no change in the promos on the regional Infinity station through yesterday, but today they're promoting "Howard Stern in the morning and the best music all day long" with no mention of Dopey, etc.

I'm not sure I agree that there is "no need for the government to intervene", however. If management had been doing their job(s) nothing like this would ever have happened.

PS: Lose the HTML on the UseNet, please.

As well they should. The molestation of hundreds of children by officials of the Catholic church certainly trumps a broadcast stunt in terms of damage to people, but absolutely NO sanctions of any kind were taken by government against the Catholic church...for actual violations of the law.

I fail to see how "offending" some prudes' sensitivity even comes close to comparing what the Catholic church did to the public.

The FCC inspector was the same individual who conducted the inspection of the first station where I worked as chief engineer more than thirty years previous. He remembered me and we talked a great deal about the evolution of radio over the years. Both of us had matured a lot, but we were still in agreement about running a tight ship.

All they need do is say the call letters and the COL within a reasonable period before or after the top of the hour. There are no definitions of intelligibility or any restrictions or definitions regarding "as close to the top of the hour as practical". I would hardly call "burying" the call letters a serious violation, if it even constitutes one at all.

Without invoking Godwin's law, the idea of giving ID to people in the media is to allow a continuing flow of information in the event of another terrorist attack. Media people with ID will get access and much faster admittance to affected areas while all others will be restricted, as is normal in a war zone.

With illegal immigration, terrorists, identity theft and such, the idea of an identity card even for specific functions is a good one, not an encroachment on any freedom. I'd say it protects us more than it limits us.

Couldn't have said it better. If a station were trying to mislead the audience about its actual identity or city of license, that would be one thing. But failing to slowly say the call plus COL precisely at :00 is hardly a world-beater of a transgression.

I would invite anyone who thinks that the FCC is completely lax in its enforcement to conduct a two-day field inspection tour of a multi-tower directional array.

KIRL in St. Charles, Mo. actually had to go back to a daytime-only
license (as part of a settlement with the FCC earlier this year)
after being on the daytime pattern (and site) at night a few times too many.
KIRL's economic hardship argument didn't wash with the Commission.

So has every other company. Clear Channel is routinely fined by the
FCC...and so was AM-FM before that.

> I'm aware that the FCC no longer requires equal time (a tragedy) or
> public service (an even greater tragedy), but when did they do away
> with good taste on the air?

The FCC walked away from its imagined role of The Taste Police some years
ago. Or, at least it tried to.

Amateur Radio Newsline™ Report 1305 August 16th, 2002

Amateur Radio Newsline report number 1305 with a release date of Friday, August 16th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Japan says no to putting communications over power lines and the NCVEC says YES to remote testing. These stories are first on amateur Radio Newsline report number 1305 coming your way right now!

(Billboard Cart Here)

**

SPECTRUM NEEDS: NO PLACE FOR PLT IN JAPAN

Proponents of using Power Line Transmission or PLT technology have suffered a major setback. Telecommunications regulators in Japan have said NO to its implementation after tests show that the system could interfere with other spectrum users including ham radio. Jeramy Boot, G4NJH, has more:

--

The RSGB has learned from its contacts in Japan who have been working on problems of interference from Powerline Telecommunications Systems that, following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit the roll-out of PLT systems operating in the range 2 to 30MHz in Japan. Japanese studies have shown that emissions from PLT are harmful to HF communications and all requests from PLT manufacturers to operate PLT systems have been refused. The RSGB has been told that the Japanese amateur society, JARL, has been actively working with the government, along with radio astronomers, broadcasters and others, to assess the impact of PLT systems on the radio spectrum. We understand that this decision has been given much publicity in the Japanese national press, which has highlighted concerns about interference to safety-of-life services.

--

What about Power Line Transmission systems being proposed elsewhere in the world? G4NJH says that in Europe, the Radio Society of Great Britain continues to press for tight limits on emissions from all wireline based telecommunications systems. Also that it is working with other High Frequency users to try to ensure that the spectrum remains uncontaminated by wideband noise. (GB2RS)

**

THE VE TESTING SYSTEM: NCVEC SAYS YES TO REMOTE TESTING

The National Conference of Volunteer Examiner Coordinators have endorsed experimental use of videoconferencing technology to conduct Amateur Radio testing in remote areas of Alaska. Newsline's Bruce Tennant, K6PZW reports:

--

An ARRL bulletin says that it all happened when the nations VEC's gathered with the FCC to discuss the all volunteer testing system and ways to inprove it. Meeting July 26th in Gettysburg, Pennsylvania, the National Conference of Volunteer Examiner Coordinators or NCVEC voted to back a one-year trial run to be conducted by the Anchorage Volunteer Examiner Coordinator in Alaska.

Jim Wiley, KL7CC, of the Anchorage group told his VEC colleagues that it's very expensive to provide Amateur Radio test sessions to the thousands of Alaska residents who live in remote areas. The vote followed discussion on whether having a VE team remotely monitor a test session while an unlicensed individual proctored the exams on site would comply with FCC Part 97 rules.

Section 97.509(c) of these rules says that three VE's must be present and observing the examinees during a test session. But Bill Cross, W3TN, of the FCC's Wireless Telecommunications Bureau, pointed out that the VEC and the VE's are responsible for the proper conduct of the exams. He also said that no rule changes appeared necessary because VEC's already have authority to determine the manner in which their VE teams conduct examination sessions. So the test of videoconferencing ham radio tests will go forward.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

The Anchorage VEC says that it will provide progress reports to the NCVEC on the videoconferencing experiment. (ARRL)

**

ENFORCEMENT: THOSE REPEATER WARS

Repeater wars continue among hams on both the east and west coasts. And the CQ Magazine website says that those involved are dragging the FCC into battles the agency would really rather the ham community settle on its own.

Two examples. In West Virginia, where an uncoordinated repeater was interfering with a coordinated repeater in Virginia, the FCC ordered the owners of the uncoordinated repeater last winter to resolve the problems. However, it appears that interference is continuing and the FCC is again looking to the owners of the West Virginia repeater to investigate and resolve the complaints.

In California, a strange one. Last March the FCC found no enforcement issues involving a repeater in Sonoma County following complaints from another repeater group. Now, users of the Sonoma repeater are complaining of interference from the repeater whose trustee originally complained to the Commission about their repeater. (CQ)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9SEH repeater serving Champaign Illinois.

(5 sec pause here)

**

ENFORCEMENT: FAX BROADCASTER FINED $5.4 MILLION FOR JUNK FAXES

The Federal Communications Commission issued a record fine of over five million dollars against a company for sending junk faxes to businesses and consumers. Amateur Radio Newsline's David Black, KB4KCH, at our South-East Bureau has the details.

--
The August 7th fine against fax.com of Aliso Viejo, California is the largest ever by the commission for violations of the Telephone Consumer Protection Act. It is also the first against a company known as a fax broadcaster.

According to an FCC release, fax.com was paid to send unsolicited advertisements and other messages on behalf of more than 100 businesses. And FCC Commissioner Kathleen Q. Abernathy says that despite repeated warnings from the commission and numerous consumer complaints, fax.com appears to have made no effort to mend its ways.

Commissioner Abernathy added that the company appears to have founded its business on the practice of sending unsolicited faxes in flagrant violation of that law. This has resulted in the fax.com being cited for close to 500 violations at about $11,000 per violation. Thats the maximum penalty and it adds up to $5.4 million due to Uncle Sam.

But a lawyer representing fax.com has another opinion. Attorney Mary Ann Wymore says that the company feels the rules on unsolicited advertising are an unconstitutional restriction of her clients freedom of speech. And Wymore indicates that fax.com is going to challenge it in the federal courts.

For the Amateur Radio Newsline, I',m David Black KB4KCH.

--

fax.com has been given only the customary 30 days to pay the fine or file an appeal. The FCC is also issuing citations to more than 100 businesses that used the services provided by fax.com. (Adapted from FCC release and published news reports)

**

ENFORCEMENT: DONT ADVERTISE BANNED GEAR ON THE WWW

The CQ website reports some unofficial advice from the FCC: If you're going to sell non FCC approved amateur and CB equipment, don't advertise it on the World Wide Web!

Case in point. A company in Wisconsin we have reported on before. Roper Electronics which was asked by the Commission back on June 18th to explain why it was alleged web advertising non-certified CB transceivers and HF linear amplifiers on its website. The company was also ordered to submit a list of all High Frequency transceivers and amplifiers sold within the US or offered for sale during 2002, along with the FCC certification number for each model.

The FCC's Riley Hollingsworth says that his office has received a answer to the inquiry from Randi Owen. Owen is the owner of Roper Electronics. Hollingsworth says that his office and the local FCC field office is reviewing Owen's reply. (CQ)

**

RADIO LAW: DIGITAL TUNERS TO BE REQUIRED FOR ALMOST ALL TV SETS

The FCC has decreed that nearly all television receivers made after July of 2007 must include the ability to receive and display digital transmissions. Digital tuners in some of the larger sets will be required by July 1, 2004. All new sets of 13" and larger must have digital receiving capability by July 1, 2007.

TV set manufacturers are opposed to the new law. They say that it will add at least $250 to the price of every receiver sold. Also, that there is not enough digital programming to watch.

The FCC has another view. It is convinced that forcing the public to buy sets equipped with digital tuners will help speed up the conversion to an all digital t-v broadcast system.

You can read the full details on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225221A1.doc (From FCC release)

**

PRESERVING THE PAST: HAM RADIO COMING TO THE USS HORNET

Tom Hale, KB6SSN, tells the Amateur Radio Newsline that the staff of the USS Hornet Museum in Alameda, California has agreed to a ham radio project. The managers of the Hornet will allow a group of Amateur Radio operators rebuild and restore the original radio systems aboard the ship.

This will be a multi-year project three phase plan that includes getting modern commercial ham gear up and running aboard the Hornet as soon as possible. The planners are looking to contact anyone who served aboard the USS Hornet. If you did or if you know someone who did please have them contact Tom Hale KB6SSN by e-mail to tom@halemail.com. (KB6SSN)

**

WITH THE HANDI HAMS: SUMMER RADIO CAMP IS FULL

The Handi Hams report that their Summer 2002 Minnesota Radio Camp session is full but the group will hold its Winter camp in Malibu, California from March 2 through 9, 2003. Those interested in attending the 2003 outing are requested

to e-mail hamradio@courage.org to request an application. Applications will be mailed out as soon as they are printed and available. (Handi Hams)

**

HAM RADIO IN THE MEDIA: MORE DONATIONS TO “THE HUMAN RACE”

Kenwood Corporation will be the supplier of hand held radios for the t-v show The Human Race. And the shows producer, Bill Desjardins, W1ZY, says that he is happy to have Kenwood on board:

--
W1ZY: “We are certainly thankful to Paul Middleton over at Kenwood for giving the go-ahead on this and we look forward to a close working relationship with Kenwood.”
--

Desjardins tells Amateur Radio Newsline that there was a specific reason that Kenwood was selected.

--
W1ZY: “We are going to go with Kenwood’s in the field. The racers and the production crews will be using D-7’s during the actual race. Now other companies make good radio’s and we looked at all of them. But Kenwood won out because it packs APRS tracking into a really rugged field package.”
--

Desjardins also says that another important item has just materialized. He says that VE7FM has donated a home-brew, handheld, two-band beam to The Human Race for use with the D-7 and VC-H1 recently supplied by Kenwood to track satellites and pursue I-S-S contacts. Desjardins adds that this particular donation brings more good karma to the project. (W1ZY)

More information on the TV show “The Human Race” is on the web at www.humanrace.fr.st.

**

HAM RADIO IN THE MEDIA: FREQUENCY -THE TV SHOW

New Line Cinema is considering spinning off the movie "Frequency" into a TV Series. “Frequency” is the film where the non-ham hero uses his dad’s old ham radio equipment to communicate with his now decease father.

The movie was a great public relations boon for Amateur Radio. If New Line Cinema proceeds, a t-v show could help put the words ‘ham radio’ in the mind of every man, woman and child in the U-S of A. (Via W6AQ from published reports)

**

NEW PRODUCTS: A MANUAL YOU CAN CARRY

Jovan Peric, KB9K, says that he is now producing fully laminated mini manuals for a number of the most popular Icom, Kenwood and Yaesu transceivers. For more

information and photos visit www.radioamater.com/kb9k on the world wide web. You can also write to Peric at 3425 West Ardmore Avenue, Chicago, IL 60659. (KB9K)

**

CONVENTIONS AND HAMFESTS: DUKE CITY HAMFEST

The 2002 Duke City Hamfest will take place Friday, August 23 through Saturday, August 24th at a the University of New Mexico Continuing Education Conference Center in Albuquerque Hew Mexico. Hours are 5:00 p.m. -to 9:00 p.m. on Friday and 7:00 am to 3:00 p.m. on Saturday. More information is in cyberspace at www.qsl.net/dchf (N5ZGT)

**

CHANGING OF THE GUARD: ERNIE HUDSON KI8O - S.K.

The ham who headed up the Montgomery Ohio ARES operation has died. Ernest Hudson, KI8O, passed away on August 2nd following a long battle with Cancer.

Hudson was 69 and had served as Emergency Coordinator for Montgomery County for over 20 Years. His organization with over 530 ARES members was one of the best in the nation. Hudson was also on the State of Ohio Council of Amateur Radio for the Montgomery - Greene County Local Emergency Response Council. And in 2001, KI8O was named as recipient of the Dayton Amateur Radio Association’s Distinguished Service Award.

Funeral services for Hudson were held on Tuesday August 6,2002 at the Parkview Church of the Nazarene, in Kettering, Ohio. (W8ILC)

**

RADIO BUSINESS: NEW MILITARY COMM SYSTEM BEING DEVELOPED

The Boeing Co. has been named prime contractor for a new U.S. Army communication system. The Joint Tactical Radio System is expected to be the foundation for all future Department of Defense tactical radios. (Published news report)

**

HAM RADIO IN SPACE: N SYNC WITH THE ISS

Russia's space agency says that it might scrap plans for 'N Sync singer Lance Bass to join an October mission to the International Space Station. This is because the Russian’s say that he had failed to meet a payment deadline.

Bass, who is backed by a consortium of companies rounded up by a Hollywood producer, David Krieff, has signed a preliminary contract for the trip. But Bass, who is already training at Star City Cosmonaut Center near Moscow has yet to secure a final deal guaranteeing a seat aboard the Soyuz craft.

If he does go, don't hold your breath waiting for him to turn up on 2 meter FM. He will be doing a lot of commercial endorsement work. In fact, Bass's space suit will be emblazoned with the names of sponsors. These logos will be seen during the eight TV shows Bass expects to beam down from space. Bass is also expected to record audio tracks for a future 'N SYNC release. (Published news reports)

**

HAM RADIO IN SPACE: THE AMSAT GLOBAL SATELLITE NET

Internet technology is allowing worldwide access to a new AMSAT net for beginning satellite operators. The AMSAT Global Satellite Net was recently started by Neil Hays, W6FOG, and may be accessed on VHF or UHF through repeaters linked via the Internet using the IRLP Internet Radio Linking Project network.

For those without IRLP access, but with HF equipment, the net may also be found on 14.250 MHz on 20 meters, every Wednesday between 0200 and 0330 UTC. I-R-L-P access is via radio only, but activity may be monitored by anyone with a computer, sound card and Internet connection. For more information on I-R-L-P, go to www.irlp net. For details on the AMSAT Global Satellite Net, see www.w6fog.net (W6FOG, AMSAT)

**

RADIO IN SPACE: SATELLITE RADIO VS. WIRELESS

XM Satellite Radio Holdings and Sirius Satellite Radio are reportedly in talks with wireless companies to resolve a dispute over interference with wireless communications services. The two sides have been bickering over the satellite services using equipment to extend their digital radio signals to hard-to-reach areas like metropolitan areas where skyscrapers can block satellite beams. Wireless companies fear that these translators will interfere with some wireless communications services. (Published reports)

**

DX

In DX F6FYD and F2VX are in Baku, Azerbaijan, until the 23rd of August. F6FYD will operate as 4J0FR- while F2VX will use the club call 4K7W. They will be active on all bands CW and SSB. (GB2RS)

And SM0CMH is active on 10 to 80 meters, including the WARC bands, on CW as SV5/SM8C from Kalymnos Island. He will be there until the 30th of August. For both these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: WATCHING TV OVER THE MOON

And finally this week, here is one of those rare stories where an individual has done something so outrageous as to earn a spot in the record books. It happened down-under as we hear from Q-News Graham Kemp, VK4BB:

--
Dr. Anthony Mann of the Physics department at the Western Australian University has created a "Receiving system" which allows him to tune in Television signals from the US.

Tony has been a DX, TV enthusiast for decades, using his scientific credentials to stretch the laws of physical limits in order to "See further and further, unaided by satellites or wire".
His latest accomplishment, apparently a first, is to work out the parameters for using the Moon as a satellite reflector for bouncing TV signals from the USA into VK6.

As regards Tony's gear, he uses an Icom R7000 receiver, a Jaycar 91 element UHF antenna fitted with GaAs-Fet 20db masthead amplifier.

So far there's nothing very special about that except that the antenna is mounted on a tripod 1.5 meters above ground with the ability to adjust both azimuth and elevation to track the Moon in his sky.

Fortunately a Moon setting in Oklahoma is well above the horizon in Perth WA.

The signal Tony receives is tiny, very tiny, and not enough to produce a picture he can watch or even sound he can listen to. At this stage, it's not about watching Buggs bunny cartoons, it's all a bit more scientific than that.

Knowing the transmitters frequency to within a few Hertz, yes that's right Hertz, is essential as what Tony is searching for is a "beat note" indication that a carrier signal is present on the Icom receiver.

By using web amateur "Moon bounce" web sites he was able to calculate the Doppler shift for a group of likely TV stations, and then got hold of a precise TV station's transmitting frequency down to the last two Hertz; ie: 501.248XXX, the X's being the Doppler shift migrated.

Results this year have included signals originating in Oklahoma and Indiana.

--

You can read more about Dr. Tony Mann’s television reception experiments at the cyberspace address that you will find in this at www.physics.uwa.edu.au/~agm/eme1.jp

>> >Perhaps Infinity/Viacom will be declared unfit to be a licensee. Remember
>> >RKO General

Actually, after the General got into deep doo-doo, and especially after it lost its Boston TV, it was probably the most responsible broadcaster in the land. After the first round of dereg, the RKO O&Os were doing real news, even on the FMs and real PA, probably the last group in the country to do so. Compliance with the Commission, and with the public interest, necessity and convenience was, for reasons of pure survival, more important than profits (although the goal was to save the hundreds of millions in properties under challenge, so in this case compliance was vital to the bottom line. Even so, while meeting the old regs in an era of deregulation, RKO made some money).

To have worked at RKO General in its last days is to understand how you can do good radio, be a responsible broadcaster and make money. With all due respect to the rest of the world, you had to have lived it to understand it.

If the Commission had allowed General Tire to spin off RKO, it may well have become one of the major players in the post-dereg era (although the battles with the Commission probably created enough of a defensive management culture that it probably would have grown at forst but then been swallowed up by one of the first of the entrepreneural aquisition-oriented groups)

Here's one I forgot about until I was surfing this afternoon.

I'm listening to a station on 107.9, but there's this annoying undercurrent mixed in. It's hard to ID exactly what it is, but eventually through trial and error I figure out that the undercurrent is from the station on 105.7. This naturally surprises me, since usually there isn't any reason it should be there. To give the station credit, the spur isn't there anymore. It's "only" shooting a spur up to 106.1 or so these days. Oh, did I mention this started two years ago? I'm not the only one to hear it, and I don't see how it could be front end overload or anything of that sort since I was about 20 miles away from the transmitter at the time.

shrug It still seems to me like the FCC doesn't care or is for sale.
Take it for what it's worth.

Perhaps you can define "common decency". What was "decent" about the molestation of hundreds of children? What was done to the organization whose officials committed those acts? Why should broadcasters (who don't even try to claim high moral ground) be treated more harshly?

Amateur Radio Newsline™ Report 1306 August 23rd, 2002

Amateur Radio Newsline report number 1306 with a release date of
Friday, August 23rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Europe prepares for another ham in space and a technology called AMBER Alert finds another kidnapped youngster. These stories and more are next on Amateur Radio Newsline report number 1306 coming your way right now.

(Billboard Cart Here)

**
HAM RADIO IN SPACE: BELGIUM TO LAUNCH HAM ASTRONAUT

Europe is about to launch another ham radio operator into space. He is from Belgium and the QSL cards are already being prepared as we hear from Jeramy Boot, G4NJH:

--
Belgium's second astronaut to go into space is a radio amateur. Frank De Winne, ON1DWN, will join the International Space Station at the end of October this year. The exact timing of the flight is not yet available.

Gaston Bertels, ON4WF, who is Chairman of ARISS-Europe, has organized an amateur radio contact with the Belgian air force Royal Technical School. Bertels says that there may be other opportunities for operators to make contact with the mission as well. A full color QSL will be available. QSL cards and listener reports should be sent either direct or via the bureau to ON7AQ.

Jeramy Boot, G4NJH.

--

More information will be made available as soon as a launch date is set. (GB2RS)

**

HAM RADIO IN SPACE: BASS TO FLY

Another flight being watched is a Russian re-supply mission this October. One that may carry a United States pop music star as the third space tourist to the ISS.

After weeks of squabbling, Russian authorities announced late last week that teen heart-throb Lance Bass of the boy-band 'N Sync will probably travel to the international space station after all. Bass still has not paid any of the

estimated $20 million for his flight but a spokesman for Russia’s RKK Energia has also confirmed that plans for Bass' seat is being held for him and launch preparations are moving forward.

If Bass makes the trip to the International Space Station, he will become the youngest person ever in space. This title has been held since 1961 by former Soviet Union cosmonaut German Titov who was only 25 when he made his first flight. Bass was born in 1979 and is currently 23.

At airtime, Bass’s sponsors have indicated that his every waking moment on orbit will be pre-planned. This could mean no ham radio using the ARISS Amateur Radio station on board the ISS. (ARNewsline™ from published reports)

**

EMERGING TECHNOLOGY: UPS NOW NEUTRAL ON RFID TAGS

United Parcel Service now says it's neutral on a SAVI Technology's proposal to permit higher duty cycles than current Part 15 rules permit for Radio Frequency or RF ID tags. These are tags used for tracking shipments and packages, among other applications. The ARRL has said that adopting SAVI's proposals would result in severe and harmful interference to Amateur Radio and has opposed the plan.

And the ARRL Letter now reports that UPS recently clarified its position in an ex parte filing to the FCC. In its statement, the shipper said that it takes no position on the rule changes proposed in the SAVI Petition because they will have virtually no impact on U-P-S's shipping operations. Also, that the requests are inconsistent with efforts to promote international standards for RF ID tags. The change in position is highly significant because United Parcel Service has an equity interest in SAVI through its UPS Strategic Enterprise Fund. (ARRL Letter)

**

EMERGING TECHNOLOGY: AMBER ALERT SAVES ANOTHER KIDNAPPED CHILD

Some hams in California are looking at ways to tie their repeaters in after the states new AMBER Alert system has helped to safely locate yet another kidnapped youngster. Nichole Timmons vanished from her bedroom in Riverside California on Monday night August 19th. She was found the following afternoon in rural Nevada based on tips called in by motorists who recognized the description of the girl, her suspected abductor and the truck they were in.

A description was flashed on electronic road signs across several South-Western states as part of a multi-state alert. At about 2:40 p.m. on August 20th, Nevada police spotted the girl's former baby-sitter, Glen Park, and Nichole driving through the Walker River Indian Reservation north of Reno. A tribal police officer stopped the pair and Park was taken into custody. Riverside Police Chief Russ Leach told reporters that the arrest came about because Nevada state police used their AMBER Alert system and received a tip from a passing motorist.

As previously reported, the AMBER Alert system is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996. It uses a combination of two-way radio, telephones, fax and data communications to quickly spread word of a child abduction. In theory it could also be interfaced to ham radio repeaters and packet networking systems. More important, with Nichole Timmons return, the AMBER Alert system is now credited with safely recovering at least eighteen children since 1997. (ARNewsline from news reports)

EMERGENCY COMMS: REPORT SAYS NYC EMERGENCY RADIO SYSTEM FLAWED ON 911

Poor radio systems with no inter-operability contributed to the casualty count in New York City last September 11th. This as a report on the aftermath of the terrorist attack targets the city’s emergency radio system as not being adequate for the task that day. Amateur Radio Newsline’s Bruce Tennant, K6PZW, tells us what that report had to say:

--
The report was prepared by high ranking New York City department officials aided by the management consultant McKinsey & Co.. It found that the rescue effort while highly, successful was hurt by a failure of city departments to work together, poor organization and a faulty radio communications system.

The radio system caught a lot of criticism. It was singled out as being the biggest problem after firefighters had entered the twin towers.

The report found that once inside, radio communications problems left many commanders and firefighters unable to communicate with each other. To make matters worse, the fire department's radios were incompatible with the police radio system and vice-versa. In other words, no inter-operability between police and fire and no direct radio communications between the two agencies.

New York City Mayor Michael Bloomberg has assured the city that the fire department's radios work properly in the future. This, regardless of the cost of improving it. Police are also considering opening the department’s citywide system of repeaters to the fire department in order to help solve the communication problem for future joint efforts.

Even with the radio problems an estimated 25,000 people were evacuated from the twin towers that day. Mayor Bloomberg calls it the most successful urban emergency evacuation in modern history.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

As widely reported, ham radio operators were among the first on the scene in lower Manhattan. They operated using an array of their own equipment and networks providing communications to all who need it. Hams and their gear performed almost flawlessly in the hours, days and weeks following the September 11th terrorist attacks. (ARNewsline™ from published news reports)

**

ENFORCEMENT: TAKE THAT LINK OFF THE AIR

The FCC has ordered a Los Angeles area ham to get coordinated or remove a repeater link from the air. Daryl Duckworth of the agency's Consumer and Governmental Affairs Bureau explains the action taken:

--
Duckworth: "We issued a letter to Leobardo Coronado, KC6PXL, of Sun Valley California, ordering that on receipt of this letter to KC6PXL, that an uncoordinated repeater link must be shut down until either coordination is obtained or a detailed plan is submitted that will prevent interference to a coordinated repeater operating on the link frequency."

--

Coronado was warned that his failure to shut down the uncoordinated link will result in enforcement action that could include license revocation and a monetary forfeiture of up to $7,500. (FCC, RAIN)

**

WITH THE FCC: FCC UNIVERSITY" LAUNCHED - CONTINUING LEARNING FOR THE FCC STAFF

The Federal Communications Commission has launched what it calls FCC University. This is a new program to ensure that FCC staff members have the cutting edge knowledge and skills to respond to the challenges of the communications field in the 21st century.

According to the CGC Communicator, FCC employees can choose from a vast array of courses on generally applicable subjects. There are also sections of FCC University that are specifically geared to meet the educational needs of engineers, economists and
lawyers working for the agency. Complete information on FCC University is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225430A1.doc (CGC Communicator, FCC)

**

CONVENTIONS & HAMFESTS: BIG BUSINESS IN HUNTSVILLE

In news from the ham radio business world, last weekends Huntsville Hamfest in Alabama may have signaled a turn-around for those who make their living selling ham radio gear. And that's good news for more than just Amateur Radio.
David Black, KB4KCH, reports:

--
While a great deal of the world's Amateur Radio equipment is manufactured in Pacific Rim countries, most of it is sold right here in the United States. The majority of sales are by family-run businesses. And as the U-S economy sagged so did ham gear sales. Slow sales meant the end for some businesses. Others struggled to survive. Now, there appears to be a turnaround with word of a fantastic sales weekend at the Huntsville Hamfest in Alabama. How good was it? Chip Margelli, K7JA sells equipment for Vertex-Standard:

--
Margelli: "Well, it has been a great show this weekend. The crowd was very active, especially Saturday morning and early afternoon. Sunday has been busier than normal and we have had great weather and a good turnout. A lot of boxes have been going out there door and there has been a lot of interest in the new products."
--

Good sales aren't the only encouraging news at Huntsville. Event organizers are thrilled at other figures—the number of people attending. While the exact gate figure was not yet available, Hamfest General Chairman Scotty Neustadter, W4WW says it could be a near record year.

--
Neustadter: "I was a little bit hesitant to think that myself. I try to error on the side of caution. But I was very, very pleased and I am thinking that we are definitely up from last year and the year before. The attendance would be a record for a Huntsville Hamfest with the exception of the year that we were the ARRL National."
--

Neustadter's enthusiasm is echoed by Todd Mowery. He's with ATOC, the company distributing Alinco ham gear. Mowery says Saturday was especially good.

--
Mowery: "Oh, I thought it was a very good weekend. Saturday was very crowded. Very impressive."

"I enjoyed it a lot. The booth was busy. We have quite a few new products over the last year that we put out -- mostly in the HT realm. And they have done really well for us. And the crowd that showed up yesterday enjoyed seeing those new radios."
--

The most succinct evaluation of Huntsville probably comes from Gary Green, N4CJX, of Ten-Tech, who needs few words to describe how he feels about this Hamfest:

--
Green: "We love Huntsville."
--

Green says Ten-Tec will be back next year. Just about everyone else is saying they will, too.

>From the Amateur Radio Newsline Southeast Bureau in Birmingam, I’m David Black, KB4KCH.

--

One more word about this years Huntsville Hamfest. It concerns the D-X Banquet. Bill Hall, W4GBF, was one of the banquet planners. He tells Amateur Radio Newsline that for the first time in its history the banquet had more people want to attend than there were seats available. Hall could not talk with us very long. He was out scouting up extra seating. More on Huntsville a bit later in this weeks newscast. (ARNewsline™)

**

CONVENTIONS & HAMFESTS: ARRL IN SOCAL

Successful ham radio conventions are not limited to Alabama. Information out of California indicate that the Southwestern Division Convention was also a success. Reports from San Diego say that there were plenty of vendors doing a brisk business and all of the forums were jammed packed. We spoke with Gordon West who was on the roof doing antenna work. He was one of the presenters at the convention and Gordo says it was two thumbs up show:

--
West: “I’m up on the roof doing ATV antenna work and ATV as well as emergency preparedness was one of the many topics that we talked about at the Southwestern Division Concention. And boy-oh-boy was it busy. The aisles were packed on Saturday morning all of the way through Saturday evening and the outside exhibits of the emergency communications vehicles were well attended”
--

Highlights included the FCC’s Riley Hollingswoth, K4ZDH, hosting a two-hour enforcement session and Bob Heil, K9EID, presenting his famed audio conference. One source tells Amateur Radio Newsline that there were about 1500 people who made the trek to San Diego for this show. (ARNewsline™)

YOUTH IN HAM RADIO: 2002 YHOTY AWARD PRESENTED TO KB3GWY

Saturday August 17th was a special day for a Reading Pennsylvania teen. That’s when seventeen year old Josh Abramowicz, KB3GWY, became the 2002 Young Ham of the Year. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, was at the Huntsville Hamfest where the presentation was made:

--

Abramowicz: “I share the enthusiasm of my colleagues at home when I say that ham radio extends many, many opportunities to the youth of America. There are many young people in our country that take an interest in our great hobby. Unfortunately, there are those who have not heard or seen our hobby and I believe that it is a great thing to spread our hobby as far, as wide and as much as we can.”
--

That’s 17 year old Josh Abramowicz, KB3GWY, as he accepted the 2002 Amateur Radio Newsline Young Ham of the Year Award. Abramowicz was honored for his work in promoting Amateur Radio in and through the Boy Scouts of America. He says that its important to let other kids know about ham radio.

--
Abramowicz: “The youth of America are interested, but in to many cases they never see any of the action that our hobby provides. Therefore, I think it is our job -- young and old -- to do our best to pass our hobby on to the next generation and this can be done in a lot of ways.”
--

Abramowicz went on to detail how this can happen:

--
Abramowicz: “I've done it through Venture Crews. There are also many other ways. There is youth groups, families promoting Amateur Radio to the youth in your neighborhood. They are the future of Amateur Radio. Much like a lot of our radios and a lot of our equipment, all it needs is one spark.”
--

And after receiving his gifts from Amateur Radio Newsline, Vertex-Standard and CQ Magazine, KB3GWY turned the tables with a special gift of his own:

--
Abramowicz: “I have here a couple of patches from the K2BSA station from the National Jamboree. These are limited edition patches with “Radio Scouting” written on it. There is K2BSA and it has the world symbol for Scouting. First of all I would like to present one to Mr. Bill Pasternak for his kind generosity. I’d like to give one to Chip from Yaesu for his kind generosity also the gentleman from CQ.”
--

Josh then donated his major gift from Vertex Standard -- a Yaesu FT-817 to the Boy Scout Venture Crew he is involved with:

--
Abramowicz: “I just want to say that the equipment will be going to the Venture Crew and the future efforts of our Venture Crew working with youth and getting them on the air. So thank you. (applause)
--

And Amateur Radio thanks Josh Abramowicz, KB3GWY, for being another excellent example of ham radio youth at its very best.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

Want to hear more? Well you can. We have the entire 13 minute ceremony posted as this weeks Newsline Extra. Just go to www.arnewsline.org and click on this weeks newscast number at the top of the main page. (ARNewsline™)

INTERNATIONAL-UK: BIG UK 5MHZ EXPERIMENT FOLLOW-UP

The British 5 MHz propagation study using Amateur Radio is picking up speed. This as an increasing number of U-K hams apply for a Notice of Variation or N-O-V to let them take part. Once again, from Nottingham in the U-K here is Jeramy Boot, G4NJH:

--
During the first few days of the 'Fivemegs Experiment' a large number of NoV holders have made contacts with each other across the UK. Radio amateurs in other countries are showing great interest in this experiment, but we must make it absolutely clear that this has been authorized in order that we may carry out propagation investigations, antenna experiments and some emergency radio training within the UK. At the present time a very small number of US radio amateurs are authorized to conduct similar experiments under the group call sign WA2XSY. We know of no other amateur stations outside the UK who have any authority to call in. Jeramy Boot, G4NJH.

--

More on the British 5 MHz experiment in future Amateur Radio Newsline reports. (GB2RS)

**

INTERNATIONAL - CANADA: NEW VE5 SM

>From our friends up North comes word that Bruce Donovan, V-E-5-N-D was recently re-elected Radio Amateurs of Canada Section Manager in the Saskatchewan Section. This, for a two-year term that will begin on November 1st. Donovan ran unopposed eliminating the need for a balloted election. (RAC)

**
INTERNATIONAL - JAPAN: HAM-FAIR TOKYO

The 24th and 25th of August, saw one of the world's largest ham radio shows takes place in Japan. It’s the Amateur Radio Festival better known as the Ham Fair and was slated for the giant Tokyo Exhibition Center. Last year Ham Fair attracted over 35,000 visitors. (JARL)

**

DX

In DX, K3TKJ is active on 40 to 6 meters as C6ALW from Andros Island in the Bahamas. He is there until the 18th of September and activity is mainly on SSB, but with some CW on 6 meters. (GB2RS)

HF98JP is a special event call sign activated by SP9HWN through the 31st of August to celebrate the visit of Pope John Paul the Second to Poland. The station is active on 80 to 6 metros CW, SSB, RTTY and PSK31. QSL as directed on the air. (Modern DX)

**

THAT FINAL ITEM: LICENSE DRIVE

And finally the story of a license drive. Not a campaign to get people their ham license. Rather the tale of one determined applicant who could not wait. It took place down-under as we hear from Q-News Graham Kemp, VK4BB:

--

Here's an amazing story of amateur enthusiasm that must be one for the record books. After many years of trying, Roscoe VK3TPJ was overjoyed on receiving news of his pass in CW. After all Roscoe has had a well-equipped HF station for years but hasn't been able to use it without supervision.

So enthusiastic was our Roscoe that waiting for the call sign in the mail was not for him. So he immediately jumped in his Falcon and drove 1000K up to Sydney to visit the ACA in person. He arrived at around 5am and waited a few hours for the office to open.

When it did, he was told he needed a passport photo to stick onto his new certificate. Undaunted, he went downstairs to an instant photo machine at Wynyard Station. Five minutes later he was back, photo in hand. Another five minutes elapsed and Roscoe was VK3KRH - authorized to operate on all amateur bands. The task achieved, he got in his car and drove straight home again - after just four hours in Sydney and a round trip of approximately 2000 kilometers!

--

Congratulations to the new VK3KRH. You can catch up with him on 160 meter AM during the morning hours. (Q-News)

**

NEWSCAST CLOSE

An FM station with a non-music format might drop its stereo to increase
fringe coverage.

This stuff happened in the 60's and 70's, too. Finding a spur, a mixing product, harmonic or such is one of the harder things. It does not show up on required monitoring equipment, and most stations don't have a spectrum analyzer (have you priced an FM one lately?).

Usually, this stuff is reported by listeners. Or other stations. Usually, it gets corrected fast. Always been that way, too.

Probably not too many people remember that stations had to have their frequency monitor calibrated against an external monitoring service. Many rural and small market AMs had no local service available to them, so they went on the air after midnight with test tones to be checked by a service that was often a thousand miles away! Puerto Rico stations were checked in Florida, for example. It required that the CE get up one morning a month to do a half-hour frequency check,a nd a repeat if DX conditions were bad.

That if you hold a radio license and act irresponsibly, and/or break the law, the license for that radio station can be revoked?

And your investment (or your investor's investments) hit the crapper?

To which I can only add, sarcastically, as many morning people would --- "duhhhhh"......

I think imposition of a penalty of some type on Infinity is necessary. Send a message to all broadcasters - this excrement has to stop.

A year or so ago, I argued that the station they were fired from in Boston (actually, suburban station) should be penalized, and some took to defending their behavior. But what they did in Boston - an out and out broadcast hoax -- the FCC probably did nothing.

Asinine defenses of their behavior were put in this newsgroup. Someone argued that it wasn't a hoax (oh? declaring that the mayor of a big city had just been killed in a car crash isn't a hoax? .... OK.....), someone said I didn't understand the law.

As a citizen, I have always felt that holding a broadcast license is a privilege, revocable if abused or if used for or to promote illegal activity.

I'm not going to engage in arguments over this, but I knew that after the Boston mayor hoax, and the fact that they found other employment immediately, and the station incurred no penalties, that this would happen again.

All I can say is, I TOLD YOU SO.

This isn't a war zone. There's no enemy army, navy, or air force. Congress has made no declaration of war.

What we have instead is government run amok, people the American people never elected, trampling on our rights and liberties. There has been one act of terror carried out by a few desperados, much like Oklahoma City a few years ago. That does not make a war.

There's no justification for imposing government ID cards, and the invasion of privacy that accompanies them, on people in radio and television. The most logical conclusion is that the government wants to have a say as to who is, and is not, allowed to work in radio or television, and that it will eventually use this power to influence what is said and heard.

>fringe coverage.

There are two (maybe 3) rim shot FM stations in the DFW area that broadcast in mono.

KESN 103.3 (ESPN Radio)
KWRD 100.7 (Christian Talk)
and maybe KTDK 104.1 (Simulcast of KTCK 1310 - The Ticket - sports)

The lack of stereo definitely helps in the reception of these stations in the Dallas area.

How many of those "frequency monitoring services" really measured the frequency ?

I remember a PPOE which subscribed to such a service ....every month we would get a "measurement report" --- it was pretty amazing....they read the frequency of our FM & TV xmtrs more than once while they were off-the-air for one reason or another.

Fortunately, digital frequency counters and rubidium standards became rather commonly available....obviating the need for patronizing that scam any longer.

WNIR(FM) 100.1 Kent/Akron, OH (within listening range of our
moderator, by the way) is a talk station that's had the stereo off
even *before* it became a full-blown talker. I'm pretty sure I heard
the strains of Grover Washington Jr.'s "Just the Two of Us" getting
swallowed by the station's awful processor in glorious mono.

There's a rumor that the processor has been replaced, and WNIR did
sound a little better last time I was in the Akron area...but the
pauses between Joe Finan's (PMD talk host) words brought up all the
background noise...so they must still have to tweak it.

But yes...mono, and has been for something on the order of 25-plus
years.

I have listened to WGOW FM for several years and remember the change from stereo to mono taking place. And, yes, improving fringe reception was a major consideration. And, yes, it did help, but a 6KW FM station is just not a powerhouse. They can scarcely be heard more than 15 miles from town. They also simulcast some shows on AM and in some areas the AM signal is better.

Most press credentials today simply demonstrate that a person has been
sponsored by a media outlet. A security pass would require some type of
clearance.

I have been through something similar and it is painless unless you have
transgressions to hide.

I expect that most LPFM stations will be mono, since they will be severely coverage-challenged. WRYR(L1) has made this choice.

As for a lot of bass, stereo/mono has no effect on this. It must just be a choice of the station's operator.

>
>- Ray Dio

It's almost as if this O&A fiasco has had more reaction than the priests &
young boys scandal. Apparently, it's almost OK to take a young boy into the
back room, but having a couple romp around in the pews is too much to handle.
How outrageous!

A few months ago, I went to WNEW-FM's webpage. I checked out Opie & Anthony as
well as Ron & Fez. I was shocked to see 3-4 photos of female genitalia (under
the teaser "clitties". I was even more shocked when there was no one who
protested. What is this kind of crap doing on a radio station's website?

I consider myself more religious than not, but I'm not devout. I don't think
that this prank is as big of a deal as what has been made of it. I'm not
dismissing it, but it's not even close to the current church practice of
rampant sexual abuse & denying the practice. According to the latest reports,
mosts people don't blame the church for the decades and decades of abuse.
Perhaps if scholars studied what kind of man goes into the priesthood and
chronicle whether it's realistic to remain celibate, etc.

There's no doubt that O&A will land another gig sooner or later. Maybe, the
execs at Infinity will resume the music and cut-out the talk.
The grass is always greener.....when the sun is shining. At night, it's too
dark to see.

Because today the government does not issue press credentials to those working in radio and TV -- they may issue them to certain personnel who cover certain events, but the government does not license individual members of the media.

Going back to the original subject of this thread... Do you think WNEW should lose it's license?

I think revocation is the only thing that will put a stop to these increasingly dangerous and degrading morning show stunts. I frankly don't care what Howard Stern says on the radio. I do care when people break the law for the sake of winning a radio show contest.

The same 105.7 I mentioned in another post was pulling this one. They did calls/fake-COL multiple times during the hour but not at about :00. They did (eventually) stop, hopefully at the request of the FCC.

>But failing to slowly say the call plus COL precisely at :00 is
>hardly a world-beater of a transgression.

Saying it audibly would seem to be in the spirit if not the letter of the law. When the legal is at :40, and there's another break at :50 and a sweeper at :00, I fail to see how it's impractical to stick the legal (even if it's one of those half second microlegals) at about :00. I'm sure a lot of people would be happy if The Powers That Be would do what other countries have done and make their "legals" specific slogans.

I would be curious to know what the station's engineer had to say when you
brought it to his attention. All the engineers I know, including myself,
take such observations very seriously and very carefully check them out.

I have fielded many, many such complaints over the years. Most of the time
they turn out to be a problem with the listener's radio or some re-radiation
that is beyond the control of the station. Sometimes it has been due to blanketing,
and I have given tips to listeners on how to correct the problem.

But on rare occasions, I have actually found problems in the station's equipment.
For instance, there is a well-known failure of the Harris MX-15 exciter (a
very popular unit that is probably still in service in hundreds of FM stations
worldwide) that causes spurs to occur on either side of a station's carrier
frequency. There have been other problems (such as intermod) that have required
the cooperative efforts of several stations.

Most stations are very, very conscientious about putting out a clean signal.
But if you notice an on-going problem, it is up to you to point it out. Station
engineers are not omniscient beings. I have always profusely thanked anyone
who brought problems to my attention, and I would assume most other folks
in charge of FCC compliance would as well.

So what did the engineer have to say when you reported the interference?

Lower Manhattan on 9/11 was a war zone. We had been attacked. The government
declared war on terrorism; terrorism has no embassy to present a declaration
in a formal sense.
>
> What we have instead is government run amok, people the American people
> never elected, trampling on our rights and liberties. There has

> Oklahoma City a few years ago. That does not make a war.

However, we have amazinly lax security. The fact that identy theft is
rampant in the criminal sector should prove this. The establishment of an
internal passport ofr ID card, especially for media representatives, is not
in any way a control of anyone's liberty. In fact, it is a tool that
guarantees liberties by protecting us.

As to the general conditions of the world, nearly anyone with a world view
and a bit of expereince believes that any threat to the US will come from
guerilla style terrorist raids, hand-carried nukes, etc. I will gladly carry
an ID card if it would help protect me and my children from such attacks. It
might control ID theft, illegal immigration and many other things, too.

> There's no justification for imposing government ID cards, and the
> invasion of privacy that accompanies them, on people in radio and
> television.

Insuring the coverage of important events and guaranteeing the security of
our leaders is not important. I don't for one want any Tom, Dick, Rashid or
Jos&#65533; getting close to our leaders without being screened. And I owuld gladly
do throught he application process myself.

Again, in many ways an ID card guarantees you freedom by preventing another
from siezing it or stealing it or doing harm to us all.

> The most logical conclusion is that the government wants
> to have a say as to who is, and is not, allowed to work in radio or

Wrong. Who does and does not apply would be the choice of the media outlets. However, the person would have to pass a security clearance to show they are worthy of being given the privilege of access to closed down locations in an emergency. The alternative is for the government to rightly not allow anyone else in.

I know of a few non-commercial stations who have their processing boxes programmed to go to mono for certain dayparts (mostly news / talk shows), for the better coverage & lower multipath. Pretty sure KALW in S.F. still does this.

> back room, but having a couple romp around in the pews is too much to handle.
> How outrageous!
>

I don't know what the reaction is in New York, but in the Boston area, the clergy/pedophilia scandal was much larger - enormously - than anything Opey and Anthony did. Several clergy members either are in prison or are on their way there, and Cardinal Law himself is under extreme pressure to resign. And he is being grilled as to what he knew, and when.

So - no it is NOT OK to take a young boy in the back room. At least in the Commonwealth of Massachusetts. Ask our district attorneys. Ask the priests who have stood trial and been convicted and confined to prison, or those who are possibly going to stand trial. Ask Cardinal Law, who has squirmed and sweated through a couple of nasty depositions.

And to reiterate - yes, there is need for the government to intervene in radio stunts like this; otherwise, it will happen again. O&A landed a new gig in New York following the "Mayor Menino was killed today" hoax, and from what we gather, the radio station suffered no penalties.

When someone's license is revoked, then the "a-duh" gang running these stunts will think twice about doing it.

The radio industry shouldn't flatter itself over this pitiful stunt.

> I consider myself more religious than not, but I'm not devout. I don't think
> that this prank is as big of a deal as what has been made of it. I'm not
> dismissing it, but it's not even close to the current church practice of

> mosts people don't blame the church for the decades and decades of abuse.
> Perhaps if scholars studied what kind of man goes into the priesthood and

> chronicle whether it's realistic to remain celibate, etc.

The two scandals (this and the pedo scandal) are both tragic and pitiful. That's about the only connection they have to each other. People trying to defend the radio stunt are grasping at straws and trying to make a connection, as if this was some sort of political statement or satire.

What it was can simply be described as a radio stunt in bad taste, extremely offensive, in all likelihood illegal (the courts will be deciding that), and underwritten by a beer company which has chosen to take the low road in promoting its products and now cannot distance itself , as much as it's trying, from this project.

That's what it is.

And I never thought much of that brand of beer to begin with.

WBEZ in Chicago does the same thing. Since they only do 8 hours a day
of music programming, unless an NPR show has flagged a stereo segment,
most weekdays they're in mono more often than not.

There is at least one who is about to be arrested for murdering one of his young boys he raped 25 years ago (looks like he may have clubed him back in the 70's). Forgot the name.....there are so many ;-). Started with an "S" in Massachussett somewhere.

Good FM reception is more related to the existence of a line-of-sight path between the transmit and receive antennas, and lack of interference than it is to the radiated power or polarisation used.

Putting the transmit antenna as close as possible to the desired coverage area, and as high as possible above the elevation of the average terrain will produce results faster than changing its radiated power.

A pattern study or pattern optimization can be done by the transmit antenna manufacturer, using a model of your antenna on a model of your mounting structure. This can be very useful to be sure that the total radiation pattern (antenna + mounting structure) does not have significant nulls in important coverage sectors.

For violating what laws? There is not law against offending people. Taking away licenses for what might be misdemeanor violations is hardly comparable to slaps on the wrists for molesting children.

[Moderator's Note: This stunt had to at least violate a public indecency law....]

Also, here is a link to a paper on the subject of sidemount FM antenna patterns that was printed in Radio World earlier this year (US editions).

www.oldradio.com/current/sidemount.pdf

This paper is a bit different, in that it shows patterns with tower distortions for BOTH the elevation and the azimuth patterns, and shows on the same plots how the patterns would look without the effects of the antenna feed system, antenna mounts and tower. The differences are interesting.

2588. CHUM Toronto change

Newsgroup: rec.radio.broadcasting
Date: 2002-08-30 11:59:11 UTC
From: Ray Collins <rcol@intergate.ca>
Message-ID: <aknmmf$2a2$1@xuxa.iecc.com>
Source record: 9996

CHUM Radio has scrapped its sports talk format, "The TEAM", in Toronto, Winnipeg, Halifax, Kingston and Kitchener-Waterloo. CHUM Radio President Jim Waters says after 15 months, the sports audience just wasn't big enough. CHUM is also eliminating its national radio newscast. The broadcaster is coping with lower third-quarter profits and higher operating expenses after launching new TV stations. It's been estimated that the all-sports operation was running losses as high as $5-million annually. The move Tuesday wipes out 44 jobs, on top of a dozen executive positions that were chopped in June. Earlier this month, CHUM Ltd., laid off 43 employees, including 19 at its Toronto television station, CITY-TV. Veteran newscaster Paul Cross is among the latest casualties, after 17 years with the station. Among those also dismissed by CHUM were Jim Van Horne and Paul Romanuk, two high-profile broadcasters who left TSN to join the Team network. Romanuk, who was the co-host of the morning show, slammed the company, accusing it of failing to market and promote the new format adequately. "The big CHUM machine, as it turned out, had about as much horsepower as my electric toothbrush," Romanuk said. "A year after we launched, a ton of people still didn't know who we were." Romanuk also said he felt CHUM did not give sports enough time to produce results and that the company also misled employees about its commitment to the format. "I was told as recently as three weeks ago in a meeting with Jim Waters that they were committed," he said. "I think there was a mixture of shock and anger by the employees. To me, sadly, it's another example of not being able to take people at their word." All-sports programming will continue at CHUM's Team 1200 in Ottawa and Team 990 in Montreal as well as at the Vancouver station, Team 1040, in which CHUM has a 20-per-cent interest. But the content will be locally produced sports. Two Alberta radio stations, Team 960 in Calgary and Team 1260 in Edmonton, also plan to air local sports programming. In Toronto, CHUM's on-air talent was up against the established sports station, The FAN, which, for the most part, produced superior programming. In three ratings periods measured while CHUM's sports network was on the air, the FAN outdrew Team 1050 in Toronto by 5-1. In Toronto, spring listener numbers for The Team came in at the bottom with a 0.4 share, or 106,000 listeners, versus a 2.3 share, 396,000 listeners, at rival sports station, Rogers' Fan 590 -- according to the Bureau of Broadcast Measurement. Former employees placed the blame for that failure on management. "If they had been as effective at running a sports network as they are at terminating employees, we'd still be in business," Romanuk told the Toronto Star. CHUM's Toronto flagship station has returned to an Oldies format, which it had for many years before going all sports in May of last year. The first song back on the air at 1050 CHUM was Elvis's ''A Little Less Conversation.'' The broadcaster originally marked its switch to sports with another Elvis song, ''All Shook Up.'' At the meeting yesterday in which Waters informed employees of their termination, Romanuk said he asked if CHUM did its homework before

starting the sports network. "I can't believe a company of CHUM's stature handled this as amateurishly as they did." (BN, CHUM, Globe and Mail)

The good 'ol Smoking Gun has audio excerpts from the "Sex for Sam"
contest on its site in either RealPlayer or GatesPlayer (Windows
Media) format:

http://www.thesmokinggun.com/archive/opieanthony1.html

You'll also find a link to the official score list (in more ways than
one) and another page dealing with the fact that Boston Beer Co.
president Jim Koch was in the studio himself to witness the action:

http://www.thesmokinggun.com/archive/jimkoch1.html

Of course, I don't know why a company that has built its reputation on
a quality product that adults would be more interested in than
fratboys would even be involved with this--until I saw a Sam Adams TV
spot on ESPN and noticed that they now offer a Sam Adams Light (!).
Do media buyers and ad agency execs really think that every white male
under the age of 35 suffers from arrested development?

> > television.
>
> Insuring the coverage of important events and guaranteeing the security of
> our leaders is not important. I don't for one want any Tom, Dick, Rashid or
> Jos getting close to our leaders without being screened. And I owuld gladly
> do throught he application process myself.

Why do "our leaders" deserve special protection? That is also
unAmerican. No special protection or priviledge is permitted under our
system.

> Again, in many ways an ID card guarantees you freedom by preventing another
> from siezing it or stealing it or doing harm to us all.

No. It guarantees that the government can control the media in more
ways than it already does.

> > The most logical conclusion is that the government wants
> > to have a say as to who is, and is not, allowed to work in radio or
> > television, and that it will eventually use this power to influence
> > what is said and heard.

Absolutely correct. And it's been coming for a long time; at least
since Nixon, probably before.

> Wrong. Who does and does not apply would be the choice of the media outlets.
> However, the person would have to pass a security clearance to show they are
> worthy of being given the privilege of access to closed down locations in an
> emergency. The alternative is for the government to rightly not allow anyone
> else in.

The government canNOT "rightly allow anyone else in" under the terms
of the constitution. That is controlling the media. Otherwise known as
censorship.

> old model, and remarkably unsatisfactory performance.

Digitally tuned receivers produce noise from their microprocessors.
Recent designs produce much less than early radios like the 2010.

The 2010 was also vulnerable to rf transistor burnouts due to
transients and induced voltages from lightning. One the input
transistor was gone, the am still worked but the sensitivity was much
reduced and the noise much more noticible.

Not all caar radios were superior performers on am however. VW's with
their short amplified antennas never worked well with aftermarket
radios like the Sonys especially after electronysis corrupted the coax
at the antenna.

One of the few remaining AM time-sharing agreements is about to
come to an end.

WIBW in Topeka, Kansas will effectively buy out KKSU in nearby Manhattan,
Kansas for $1.5 million, according to the Topeka Capital-Journal.

KKSU has been broadcasting on the 580 kHz frequency in northeastern
Kansas from 12:30 pm to 5:30 pm weekdays since 1969, usually on
a separate transmitter. The change in coverage is noticeable in
Lawrence, Kansas and in Kansas City.

The time-sharing arrangement dates to 1929, shortly after then-portable
station WIBW, once based in Chicago, settled down in Topeka to
avoid the loss of its license.

The time-sharing agreement became contentious this year when KKSU's
owner, Kansas State University, awarded broadcasting rights to
K-State football to a statewide network, bypassing WIBW. WIBW
successfully argued in a state district court that the time-sharing
agreement gave it the right to broadcast the football games.

Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Hello to all in DX land! Here's the full QSL info for 3 DX tests which I have been promised. Normally, I just send out a summary of tests on every Friday, but since these 3 start in October and it's still August, I thought I might as well send everyone all the info, so they can refer back to it, if needed. Next week, I'll start sending out just reminders again, and post full information on the DX mailing lists.

Here's notice of some upcoming DX tests...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Monday, October 21, 2002 - WLCR-1470, Louisville, KY (COL Shepherdsville, KY) will conduct a DX test from 3:00-4:00 am EDT. The station's regular programming is EWTN - their slogan is "Louisville's Catholic Radio". IDs will be played in both Morse Code and voice 0 the IDs will use a 1 kHz tone at 5 wpm sent every 5 minutes. The station's power will be 750 W (not sure of pattern).

Reception reports(*with return postage*) may be sent to:

Vince Heuser
WLCR-AM
3600 Goldsmith Lane
Louisville, KY 40220
E-MAIL: heuser@iglou.com
WEB: http://www.wlcr.net

(Arranged for the IRCA CPC)

Saturday, October 26, 2002 - KNOM-780, Nome, AK will conduct a DX test

from 12:00am-1:00am Alaska Local Time(e.g. 4-5am EDT). From Les Brown, who
arranged the test: "We are currently planning to go from nighttime power
(14 kW) up to 25 kWwithin a minute or two after midnight on 10/26, a Saturday.
As I won't be here, I'll set it up with a regular operator to make the change
as soon as the station goes into AP network news. The news ends at

12:05 and is
followed by lengthy weather forecasts for various Alaska regions,
typically
ending around 12:09. Programming will be Polish polkas from then until
the next
newscast at 1 AM with a clear ID between every programming item.
We'll run
our normal public service stuff (we are non-commercial) along with
time and
temperature checks. Morse ID's will be frequent." Also - Les mentions
that the
station will stay at 25 kW until 6am Alaska time.

Reception reports(*with return postage*) may be sent to:

Les Brown
KNOM-AM
P.O. Box 988
Nome, AK 99762

EMAIL: rfn@nook.net
WEB: http://www.knom.org

(Arranged by Les Brown for the benefit of all DXers)

Saturday, November 2, 2002 - WDFB-1170, Danville, KY (COL Junction
City, KY) will conduct a DX test from 12:00am-?? EST. The station's
regular format is Christian; they go by "WDFB Christian Radio". Songs
such as "Amazing Grace" "Sweet Beulah Land" and "My Country, My Flag
(by the Hoppers)" will be played, along with voice and/or Morse code
IDs.

Reception reports(*with return postage*) may be sent to:

WDFB Christian Radio
P.O. Box 106
Danville, KY 40423-0106

EMAIL: music@searnet.com
WEB: http://www.wdfb.com
ICQ# 38796683

(Arranged for the IRCA CPC)

Also, if you hear a test, PLEASE, PLEASE let me know, via either
e-mail or in rec.radio.shortwave! And if you send a reception report
to
a station, please remember to include return postage with your
report...

Lynn.

An addenum to Mark's message: The "Top Of The Morning" column on page 2 of today's Kansas City Star sports section related how K-State sportscaster Greg Sharp got, essentially, jobbed by the agreement, in which WIBW relinquished the rights to K-State games it had gone to court to keep in order to get those other five hours on the frequency.

In it Sharp rebutted a rumor that he had rebuffed a "sweet" offer from Mid-America Ag Network to do the K-State games for them. In fact, he implied that he would have had to take a pay cut to become the K-State voice on MAAN.

I can beleive that having worked for "Uncle" Larry Steckline myself at one point. Uncle Larry never got anywhere by spending money on talent.

S.E.N.
Would love to see WIBW buy out MAAN and tell Steckline to take a flying leap.

> Do media buyers and ad agency execs really think that every white male
> under the age of 35 suffers from arrested development?

Pure and simple. Money.

The 18-35 bracket are big beer drinkers.

I saw an Adams' spot as well. Everyone looks to be under 21 in the ad.

The older crowd - 35-54 - and the yuppies - embraced Sam Adams as the 'trendy' beer. However, in that age group, each consumer doesn't drink a lot of it, and there is only so much profit in one six-pack. But the under 25 crowd does drink a larger per-capita volume.

Someone like myself might buy a six- or 12- pack of beer. I'm 50. I'll spend more on it in exchange for the quality. But that six-pack might take me two weeks to go through.

A college kid, on the other hand, might put away one or two six-packs on a weekend. Note the timing of these ads - just about when the kids are heading back to college.....

Some notes of my own:

* Bob Newton, former Station Manager at KLWN/KLZR in Lawrence, expected the deal to go through, although he did not expect WIBW to pay a million and a half.

* I think that KKSU's in house agricultural programming will be farmed out to some of the other public radio stations, possibly including KU's KANU. In fact, there's a CP for KANV in Olsburg, southwest of Junction City and possibly within earshot of Manhattan (class A)

* WIBW has admitted that they have attempted to acquire the KKSU time before, possibly including building a network of FM stations (Mark was telling me about that one this morning, in fact). I'm not sure if K-State would be interested in doing it, since it has been doing 25 hours/week, and a good portion of Kansas already has NPR stations via the other colleges and universities in Kansas.

Public lewdness is a crime.

Deliberately defiling a house of worship is a crime.

Intentionally disrupting a religious service is a crime.

Disorderly conduct. Indecent exposure.

That's all I could think of.

The broadcasters brought to trial? I'm sure the flunky who was in the cathedral urging the participants on and broadcasting what was happening will be prosecuted.

One thing I'm curious to know. Did the couple win the contest? Is the brewery that promoted the stunt going to give them whatever prize was offered?

You are being too literal... again.

There is no provision to declare war on a vague organization, only on a state. Therefore, there is really no way we could technically declare war on terrorism as terrorism is not an entity of itself. But, I would bet if all Senators and Representatives were polled, they would nearly uniformly state that we are at war with terrorism.

> >
> > However, we have amazinly lax security. The fact that identy theft is

No. the subject, to begin with, was identity cards for media representatives. The "war on terrorism" reference was a sidebar to this issue.

Don't try emigrating. Nearly every other country of the world has some form of national ID. The uses range from more secure identification when charging or cashing a check to a standardized form of identification for transfers of

property, etc. How exactly does having something that proves you are you
that is of better reliabilty than a driver's licence impinge on your rights?

And the document is not intended for "moving about" (although it would be a
bit better than a driver's license for boarding planes, etc.) but rather to
have a more valid, secure form of ID.

Why? Lincoln, John Kennedy, Robert Kennedy, Ronald Reagan, Garfield, Martin
Luther King, etc. Our open system seems to encourage or incubate loonies. We
owe those who choose to enter public service a degree of protection.

Our sytstem, like it or not, is a modified meritocracy, and priviledge is a
function of income and postion.

Wrong. There are plenty of government locations, events and occurances that
have no outside access. In a state of war or a state of emergency, the
governmet can and has restricted access. The government can not be 100%
tranparent, especially in areas of national defense.

Since having sex in a church does not appear to be an unusual event,
at least between priests and altar boys, I think the response of the
church is a little excessive.

Molesting underage children is clearly illegal. Sex between consenting
adults is legal and often encouraged. If I were the Cardinal I'd be
thrilled that something happened to take the heat off child
molestation for a short time. I'd hire a PR firm to keep the story
alive as long as possible.

I do agree it was in incredibly bad taste, even for Opie and Anthony.
I stopped expecting good taste from radio a long time ago. I just
wonder where we draw the final line and say enough is enough. When
another morning show has a character named Turd I doubt it'll happen
any time soon.

At the very least, I would have suspended, without pay, anyone
involved in the stunt. Just on a practical level I wonder what the
station would gain by such a stunt that would offend a city with a
huge Catholic population.

Let's see this happen in a Synagogue. I'd bet we'd see Israeli jets
over New York in air strikes against the radio station. Jews tend to
retaliate. Just ask Yasser Arrafat.

The station did the politically correct thing to appear to be properly
horrified in firing the talent and suspending the management. It's
good PR and it'll get the FCC off the hook to be able to point to the
fact that the station has taken it's own actions to see bad taste
removed from the air. This will allow the political contributions to
continue.

Rich

2608. Sam Adams exec publicly apologizes for radio sex stunt

Newsgroup: rec.radio.broadcasting
Date: 2002-08-31 14:55:54 UTC

More on the Sam Adams/WNEW sex stunt as reported in today's Boston Globe. Of course, it's on a Saturday, where it won't get the splash, but...

1) The beer company apologized yesterday in a series of ads in Boston newspapers, and reportedly is going to purchase an apology ad in the New York Post.

2) The TV commercial, which, according to some, depicts underage drinkers hiding beer from the police at a party, has been pulled.

3) The Globe reported (and this is unsubtantiated, and denied in the report) that the participants may have been paid for their participation in the stunt.

I don't know broadcast law very well, but it's my understanding that the FCC gets very upset if you run a contest of any type which isn't really a contest.

4) There is little news as to whether the boycott will stick, but many Boston establishments have told Sam Adams brewery to take a hike for the present.

I noticed that some of the TV ads that were available online were pulled from the company's website on Friday. The "videotape" ad which had been refused in some markets, and which the company boasted was "banned" - was pulled from the website. The website has been reconstructed in the last two days.

It shows the coercive power of the humorless portion of the population.

D'Amato died when he apologized for a tasteless imitation of Judge Ito
that he should have stood up for. There should be room in public discourse
for it unless you're cowardly.

I'd suggest sending people in to smoke in church, to test the waters. That's
always been a taboo. Start with Methodists, front row.

I think Buckley immediately did an essay on why the O&A stunt was not funny,
sort of a feminist reaction.

Good for Sam Adams.....unlike the Broadcast industry at least they
know when they've f%&cked up and try to make amends. I like their beer, and
will continue to drink it. (when I can't find a good German/British one
first).

--
"If ye love wealth better than liberty, the tranquillity of servitude better
than the animating contest of freedom, go home from us in peace. We ask not
your counsels or arms. Crouch down and lick the hands which feed you. May

your chains set lightly upon you, and may posterity forget that ye were our countrymen."

Samuel Adams, speech at the Philadelphia State House, August 1, 1776.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

Again, those in the industry try to minimize this, with the "it's OK, look what the priests did."

Any priest who molests a kid is subject to arrest, prosecution and imprisonment. It's happening now, at least up here in Boston.

Any radio station operator who breaks the law is subject to fines and revocations.

> I do agree it was in incredibly bad taste, even for Opie and Anthony.

When the radio industry gets slammed for it. Not issued minor fines which they construe as the cost of doing business.

> At the very least, I would have suspended, without pay, anyone

> continue.

Right. Except they did a stunt in Boston (broadcast hoax) as a joke, were dismissed. If the FCC just lets it go, the radio industry will just go on as it always has. When the heat's on, they'll just fire the (I hate to use this word) "talent" and move on to something else.

Until someone's prosecuted and a license is revoked, expect more of the same.

2617. Re: End of KKSU coming soon

Newsgroup: rec.radio.broadcasting

Richie Kennedy <route56@route56.com> had written:
|
| * I think that KKSU's in house agricultural programming will be farmed out
| to some of the other public radio stations, possibly including KU's KANU.
| In fact, there's a CP for KANV in Olsburg, southwest of Junction City and
| possibly within earshot of Manhattan (class A)

"Agricultural programming...farmed out" ...heh.

I'm not sure how much KU is going to want to help out KSU here.
Extension is a mission of a land-grant university, which K-State is
and KU isn't.

There are other possibilities: setting up streaming audio on
a web site ... K-State leasing out an audio subcarrier
on the nascent KANU network and maybe on High Plains
Public Radio (the KANZ network in western Kansas) ... getting a
satellite channel on Dish or DirectTV ... given enough money,
buying out some of the stations that the smarmy American Family
Association has been putting on the air in the NCE band in recent
years and building those into a K-State extension network. Many of
those possibilities, though, would require much higher ongoing
expenditures and an expansion of programming from the current
five hours per weekdays on KKSU.

But anyway, there's another question here that may warrant an
answer: is the time past for agricultural programming and market
reports? How many farmers do *not* have at least one computer these
days? Market data can be obtained more efficiently through other
services. Even SCA subcarriers can be used for the purpose. The
Shepherd stations in Missouri have been pioneers in using SCA for
data transmission.

It's just possible that K-State extension saw that a radio station
on for five hours per weekday might become decreasingly effective
as a form of outreach. The football-rights dispute then becomes a
convenient exit strategy. The sad thing is that they could have
figured this out years before and could have gotten an FM network
out of the deal. The time-sharing arrangement has been an
interesting piece of living history. When this one is gone, the
only remaining one that I know of (on the AM band) will be WCEV and
WVON in Chicago. But I'm sure the K-State people asked themselves
how viable KKSU would be in the coming years when making their
decision to accept the buyout.

Well, that's what a lot of people are saying about WNEW(FM) right now, I see a lot of "why punish them???"

Commissioner Powell, if you're lurking - GO FOR IT.

One thing about Americans is that they have a tremendous sense of humor.

But, I think you are misunderstanding something.

Very few people found the stunt funny. I think you're falsely assuming that most people thought it was.

None of these, even in aggregate, would amass punishment equivalent to the forfeiture of a multi-million-dollar radio station, or even the loss of a high-paying job. To expect that accomplices to these acts (if you could prove that the station and/or its employees were indeed "accomplices") would suffer more punishment than the perpetrators is ludicrous.

> The broadcasters brought to trial? I'm sure the flunky who was in the
> cathedral urging the participants on and broadcasting what was happening will
> be prosecuted.

But even if you brought the broadcasters to trial, you cannot accuse them of something more egregious than the core act.

I understand that Koch's comments during the event itself were somewhat less
than apologetic. "Enthusiastic" would have been a better description.

August 30, 2002
In 1985, I founded The Boston Beer Company with the objective of brewing America's
highest quality beer. Throughout the past 17 years, the employees at The Boston Beer
Company have worked very hard to build a good company with world-class products and a
quality reputation.
We are tremendously indebted to all those people who gave us a chance and helped us
establish our company and our brands.
Recently, an appearance I made on a major radio program cast a shadow over that hardearned
reputation. My presence on the show was a serious lapse in judgment, and I regret it.
I sincerely apologize to the Catholic Church and everyone who was offended by the incident
and by my association with it.
We regret that this incident may have damaged our relationship with you. I hope that, over
time, we will earn your respect again.
Sincerely,
Jim Koch
Chairman & Founder
The Boston Beer Company

Well, it certainly doesn't give the church the high moral ground to express
self-righteous indignation.

> Any priest who molests a kid is subject to arrest, prosecution and
> imprisonment.
> It's happening now, at least up here in Boston.

But not everywhere...and the church has done its best to protect and shield
offending priests whenever possible. Only when faced with such intense
scrutiny has the church finally given some of them up. Furthermore, priests
are church officials, acting in the name of the organization itself.

> Any radio station operator who breaks the law is subject to fines and
> revocations.

In accordance with the severity of the offense, as it applies to broadcast
regulations, stations might be fined. While monetary forfeitures are
commonplace, "revocations" are exceedingly rare. From what I have seen so
far, violations of broadcast regulations in this incident were minor and
"correctable", which the broadcaster has readily done.

> When the radio industry gets slammed for it. Not issued minor fines which
> they
> construe as the cost of doing business.

Not going to happen for content-related issues. Seizing stations for
broadcasting controversial material would be a major departure from
tradition and legacy.

> Right. Except they did a stunt in Boston (broadcast hoax) as a joke, were
> dismissed. If the FCC just lets it go, the radio industry will just go on
> as
> it always has.

Would you like broadcasting to stop?

> Until someone's prosecuted and a license is revoked, expect more of the same.

The first attempt to revoke a license solely based upon "offensive" program
material would result in a major legal battle, the outcome of which is by no
means certain. The fallout would most certainly produce unintended results.
If successful, broadcasters would live under the Sword of Damocles, knowing

that broadcasting just the "wrong" thing could lose their investment. The result would be "super-safe" programming that would offend no one ever at any time.

How fun. How exciting. How scintillating.

Giving broadcasters a wide berth may not make everyone happy, and we will always have distasteful shows and events that get aired. But that is the price we pay to enable the free exchange of ideas. Once you start to filter, you risk the removal of valuable ideas, points of view, and some intelligent debate. I, for one, do not wish to close all that off in an attempt to protect folks who cannot find the off-switch on their radios from "offensive" material.

A final thought: even with "super-safe" programming, SOMEONE would be sure to find some reason to be offended and it would start all over again.

STL system. Would consider 950 MHZ or possibly a 450 MHZ system (Are these legal?)

Also RPU equipment. Preferably in the 150 MHz range.

Cost is obviously an object. Anyone got something in their closet we could use?

RadioOnDemand annouces our first Land Based Simulcast Relay.

Moon Broadcasting installed our Land Based Simulcast to relay a live stereo broadcast signal to a remote broadcast station for simulcast.

Compared to satellite or ISDN our Land Based Relay cost only pennies on the Dollar and allows for the separation of local content, like news, weather, traffic or commercials on the relayed stations.

More importantly our relay provides a triple backup for security reasons.

Further information can be received through email.

Does anyone remember the occasion sometime in the last couple of years that Walter Cronkite made a "guest" anchor appearance on a CBS Radio News top of hour newscast?

Seems like it might have been the 2000 presidential election result (Supreme Court ruling?) or something like that. I recall hearing that Walter was at CBS the day of whatever this breaking story was and some of the honchos asked if he'd like to do the lead on the top of hour...I'm pretty sure he did the story and then handed off to the normal anchor...anyone remember the event?

I would like broadcasting of HOAXES to stop, yes. I would also like broadcasters to not run events encouraging listeners to commit criminal acts. What happened in New York was a criminal act, and cannot be dismissed as a "content-related issue".

And one must contrast a joke against a hoax warranting a rebuke. For instance, aanouncing that you must remove your Christmas lights by January 5 or face a fine is a joke. Announcing that the Mayor of Boston was killed in a car crash is a hoax. Somehow, some in here couldn't see the difference.

I think it's possible for broadcasting to continue in this country without hoaxes, without encouraging people to do dangerous things, and without having contests that involve and encourage criminal activity.

So, no, I would not like broadcasting to stop. I only want IRRESPONSIBLE broadcasting to stop.

>
> > Until someone's prosecuted and a license is revoked, expect more of the same.
>
> The first attempt to revoke a license solely based upon "offensive" program

You're missing the point. This was not a content issue. It's a CRIMINAL issue.

This is becoming like a broken record -- but the New York stunt involved alleged breaches of the peace.

Broadcasting can be done responsibly -- without having to super-sanitize everything.

>
> Giving broadcasters a wide berth may not make everyone happy, and we will
> always have distasteful shows and events that get aired.

As I said, bad tastes sells. But -- criminal acts shouldn't.

> But that is the
> price we pay to enable the free exchange of ideas.

I am a champion of the first amendment. But the first amendment does not include the right to yell fire in a crowded theatre, engaging in other acts that can endanger public safety - such as broadcast hoaxes, and as far as I know, defiling a house of worship.

> Once you start to filter,
> you risk the removal of valuable ideas, points of view, and some intelligent
> debate. I, for one, do not wish to close all that off in an attempt to
> protect folks who cannot find the off-switch on their radios from

How about taxpayers who wouldn't be caught dead listening to dreck like that, but have to pick up the tab for it, or suffer the consequences of it?

> A final thought: even with "super-safe" programming, SOMEONE would be sure
> to find some reason to be offended and it would start all over again.
>

So what you're saying - anything goes! And there should be no test of responsibility. Encouraging people to have sex in a church and broadcasting it on air, that's OK!

Now - "offensive material" --- even if you weren't listening - the "offensive material" took place in a house of worship, entailed illegal acts, and affected a hell of a lot more people than those listening to the demented programming that day.

Likewise, when they broadcast the sick hoax that the mayor had been killed -- the chaos that ensued in City Hall, the relatives of the Mayor's family who heard that he had been killed -- COULD NOT BE SHUT OFF BY CHANGING THE STATION.

A broadcast hoax, or dangerous, or illegal stunt, has the potential to affect many more people than the idiots who enjoyed the sick programming on stations carrying O&A.

> data transmission.

Actually, the SCA services are largely passe, replaced by the DTN satellite service.
I don't think there are any SCA-delivered services around here anymore. Bonneville had one, but it's been gone for years. And we used to have a Farm Bureau-operated service on our SCA, but it's been gone for a number of years.

Any farmer that interested already has a little dish and is getting all the market info, weather, etc. from DTN. And DTN subscribers can also get the same info on the internet. Some of the market info isn't as important as it used to be, either. I don't know about Kansas, but here in Iowa many of the hog producers (and all of the turkey producers) raise the animals under contract, so it doesn't matter to them what the market does, their price is already locked in.

I think farm and market info on the air is falling into two camps... the very extensive WNAX and KRVN type stations on all day long, or short updates (which WNAX and KRVN both do on their FMs) I suspect the audiences are moving more and more to the FMs.

>

South Dakota public radio used to have a daytimer with a pretty good signal on 690. The tower went down some years back, and they didn't feel it was necessary so it wasn't replaced, and the station was deleted. But they have a network of FMs.

> The football-rights dispute then becomes a

Maybe I am just cynical. But why do I suspect this apology issued only after the company began to experience a drop-off in sales, or feared it was about to?

john cline ii who doesn't think that apology rings very true...and who realises that issuing it probably offended some of the target audience as well!

Amateur Radio Newsline™ Report 1307 - August 30th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, August 30th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio assists at a world development summit in Africa and hams in Michigan aid in the search for two missing girls. These stories are first on Amateur Radio Newsline report number 1307 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN ACTION: SUMMIT IN SOUTH AFRICA

Ham radio has played a vital role in a World Summit for Sustainable Development held in South Africa. It began on Monday August 26th. Just before the opening gavel fell Hans van de Groenendaal, ZS6AKV, filed this report from Johannesburg:

--
"Radio amateurs will be providing communications assistance at three main operational centers. Members of the South African Radio League's emergency communications arm Hamnet will set up facilities alongside the National Defense Force and the South African Police Services. They will be operating at the main convention center, at Campton Park near Johannesburg International Airport and in Pretoria near the Woodcliff airbase.

Radio amateurs will be using the extensive repeater network in the city as well as H.F.. ZS6BUU, the National Director for the South Africa Radio League's Hamnet has more details:

--
ZS6BUU: "There will also be at least two mobile stations fully equipped to be available should the necessity arise. More vehicles can be called upon if needed.

One vehicle will be on stand-by should we need communications from Lancerial Airport. Now, Lancerial is an alternative airport should Woodcliff Airbase become clogged up with aircraft coming in from al over the world.

Hamnet is required to render emergency communications in association with the SANDF -- that's the defense force as well as our local

police. Hamnet regards this as a good exercise to test our preparedness and how we will be able to handle any emergency -- if and when one should come up."
--

It goes without saying that many other radio amateurs will be available should the need arise.

I'm Hans van de Groenendaal, ZS6AKV, reporting from Johannesburg.

--

The 10-day summit is being billed as the largest in U.N. history. It has been nicknamed Rio+10 because it marks the 10th anniversary of the landmark 1992 Earth Summit in Rio de Janeiro.

**

RESCUE RADIO: MICHIGAN HAMS HUNT FOR MISSING KIDS

They did not plan to get involved but a group of Michigan hams swung into action after a policeman in the town of Grand Haven knocked on the door of Andrew Young, N8ARY. The officer was going door to door looking for two missing area youngsters. On learning of the situation, Young decided to see what he could do to help:

--
Young: "I called a friend of mine who is also an Amateur Radio person because he had a park across from his house where kids generally play. I asked him to keep an eye open for the two children. A few minutes later he called someone else on the repeater and asked them to do the same thing and a few guys heard it and just kind of assembled as a loose knit net."
--

The person that Young called was Donald Smith, N8HCS, also of Grand Haven. He enlisted Smith to keep his eyes open for the two young girls. N8HCS assisted by David Cross, N3WJF, then called up an informal net that grew in size to about a dozen area hams. Most of the action was in the search:

--
Young: "We sort of just stayed out on the street and interacted with people and reported anything we heard back to the net control."
--

As the informal net grew into a formal operation, John Sundstrom, N8YQD was dispatched to be at the girls parents home. His job was to maintain contact after the net turned into a formal search. Coordination and central dispatch where in the hands of Don Meyer, KB8ODB.

The good news came when the girls were located by the police about two hours after the start of the net. This, thanks to a report from

a neighbor who saw the girls and called in.

Young says that with all of the recent abductions in the news, it is nice to see a community mobilize like this to find the missing children. Even better: In this case the search was a complete success. (ARNewsline™)

**

EMERGENCY COMMS: GRANT AIDED ARRL TRAINING TO BEGIN

Word from the American Radio Relay League, that its Amateur Radio Emergency Communications Training Courses supported by a $181,900 federal Homeland Security grant will begin within a few weeks. As previously reported from an ARRL bulletin the League was among several dozen nonprofit organizations designated to receive some $10.3 million in federal money to boost homeland defense volunteer programs. During its first year, the grant will reimburse the cost of Level I ARRL Amateur Radio Emergency Communications Course training for up to 1700 volunteers. More information is on the web at www.arrl.org. (ARRL)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Amateur Radio Club of El Cajon in El Cajon California.

(5 sec pause here)

**

RADIO RULES: VANITY FEE GOES UP SEPTEMBER 9TH

A new and slightly higher fee for vanity call sign applications will go into effect on September 9th. According to the FCC, applications received on or after that date will be subject to a $14.50 fee for a full ten year license term. (FCC, RAIN)

**

ENFORCEMENT: FCC WEIGHS INTO REPEATER FRAY

The FCC is weighing in on an ongoing repeater versus repeater dispute in Arkansas. The Agency's Daryl Duckworth, NN0W, explains:

--
Duckworth: "We requested further information from Gerald Hogue, KD5CYA, of Conway Arkansas regarding continuing interference between his repeater and the AC5RU repeater. We had notified both parties some time sago that each was responsible for taking steps to minimize interference, but we are seeing no cooperation on the part of the KD5CYA repeater. Hogue has 20 days to respond."

--

But the problem seems to have gone past the repeater versus repeater stage. Now users are getting involved and the FCC is taking action there as well. Again, the FCC's Daryl Duckworth:

--
Duckworth: "On the same topic, the Enforcement Bureau has warned Ronald Lewis of Morrilton Arkansas, KC5BNN, about interference to users of the AC5RU repeater. I was pointed out Lewis that his license renewal comes up in June 2003 and that this matter must be resolved if he is to receive a routine renewal."
--

In its letter to Lewis the FCC said that it will not tolerate deliberate interference between the two repeaters. Also that it does not care if the interference is from a transmission by one of the repeaters or by a user of one of the repeaters making a broadcast intended to degrade the other repeater. Either way, it must stop. (FCC, RAIN)

**

ENFORCEMENT: MORE TROUBLES FOR FAX.COM

More problems for fax.com – the direct fax advertising company recently hit with a 5 point 4 million dollar fine by the FCC. Now a California businessman says that he wants a lot more from the firm in punitive damages for being spammed.

Steve Kirsch, a Silicon Valley executive is suing fax.com for two-point-two trillion dollars. Yes we said trillion with a capitol T. And Kirsch says that he has filed the litigation because he believes that to be the amount consumers should get if the proper penalty is assessed for each and every junk fax ever sent by fax.com, plus triple damages as permitted under federal law.

Kirsch is founder and chief executive of Propel Software in San Jose. He decided to pursue the class action suit after he got a torrent of unsolicited faxed ads. Kirsch estimates an unwanted fax wastes ten cents for the cost of paper, ink and fax machine wear and tear. (Published news reports)

**

NAMES IN THE NEWS: BASS WILL FLY IN OCTOBER

According to the latest news reports, Lance Bass of the boy band 'N Sync will fly to the International Space Station in October. Hollywood producer David Krieff, who has arranged financial backing for the performer's space venture, says that Russian space agency executives and attorneys recently flew to Los Angeles and spent eight days hammering out a 400-page flight agreement with Bass' representatives. Krieff said Bass is slated to blast off October

28th from the Baikonur Cosmodrome in Kazakhstan with two cosmonauts on an eight-day Soyuz "taxi" and resupply mission to the space station. Krieff also disputed remarks attributed to a Rosaviakosmos spokesman Sergei Gorbunov that the Russian space agency might scrub Bass from the mission because he had failed to meet a payment deadline.

Bass hopes to follow in the footsteps of the world's first two space tourists -- American businessman Dennis Tito and South African millionaire Mark Shuttleworth. There is still no word as to whether or not Bass might operate the ham station on board the I-S-S, but the entertainer was scheduled to talk with school children from the Johnson Space Center in Houston on August 29th over the Internet. This, using NASA's Distance Learning Outpost and Education Web Portal. (Published news reports, NASA release)

**

NAMES IN THE NEWS: FORMER HAM TO HOST REVIVAL OF TV GAME SHOW

Donny Osmond, the former KA7EVD, will be helping to bring a legendary television game show back to the small screen. USA Today reports that starting in September, Osmond will be the host of Pyramid, a syndicated revival of the game shows created and hosted by Dick Clark in the 1970s and '80s.

According to Los Angeles ham radio lore, Osmond was reportedly mentored into ham radio in the early 1980's by the late Art Gentry, W6MEP. This, when Osmond and his sister were taping the Donnie and Marie Show at the Golden West Studios in Hollywood. Gentry, who was employed there as a Broadcast Engineer is best known for his development of the FM repeater – a device that changed the way most hams operate on the VHF and UHF Amateur Service bands. He and his wife Millie, K6JJN, were also mentors to many Los Angeles youngsters wanting to enter ham radio. (USA Today, ARNewsline™)

**

NAMES IN THE NEWS: DARA NAMES SCHOLARSHIP WINNERS

Gary Des Combes, N8EMO Chairman of the Dayton Amateur Radio Association Scholarship Committee has announced the recipients of the clubs 2002 scholarship program. Named to receive financial support for their future education are Thomas Tenaglia, K3TAT; William Bailey, KF4VAU; Victoria Morgan, KF4PNI; Nicholas Bishop, KG6JSA; Jeanne Hansen, KB2RAP; Sara Hanna, KE6MWX; Jeffrey Doub, KC8IOC; Michael J. Haessler, KB9TGF and Amy Morris, KI6F. Scholarship awards run between $1000 and $2000. (DARA)

**

HAM RADIO BUSINESS: NEW LINK-COMM SOFTWARE ENHANCES REPEATER CONTROLLERS

Attention repeater owners. If your system uses a Link-Comm controller, have we got good news for you.

Steve Srobel of Link Communications has announced that new programming software for the RLC-1 Plus, RLC-2, RLC-3, RLC-4, and RLC-Club is now available. The new software allows you to program messages, timers, autodial numbers, etc. with a point-and-click interface. It also provides a way to manually edit and upload a file of other advanced commands.

The best part is that it can be downloaded for free from www.linkcomm.com/quickstart.html. You can email feedback about the program to mark@l... (Repeater Owners Remailer)

**

HAM RADIO BUSINESS: COMMEMORATIVE PIN FROM KENWOOD

Kenwood Communications is offering a commemorative "United We Stand" pin with the purchase of any new Kenwood Amateur radio. The offer is good in the United States only and began on August 20th. It runs till further notice. More information as on the web at www.kenwood.net/ama_page.cfm (Kenwood Communications)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

CONVENTIONS: CB'ERS TO MEET DOWN-UNDER

Are you into C-B radio? Do you like to travel? Would you like to go to a week long C-B Break? Well here's a convention for you.

Q-News reports that the Albatros C-B Radio Club will be holding its annual convention the week of September 14th to the 21st. That's right it is a week long C-B show with all the trimmings. New gear. lectures and what have you.

It all takes place in the city of Ballina. That's down-under -- in Australia. (Q-News)

**

HAMFESTS: LIMARC IN NEW YORK SEPTEMBER 15TH

Closer to home, LIMARC, the Long Island Mobile Amateur Radio Club will be holding its fall hamfest on Sunday, September 15th. The venue is Briarcliffe College in Bethpage, New York. Gates open at 6:30 AM for vendors and for the general public at 8:30 AM Eastern time. More information is in cyberspace at www.limarc.org or call

the 24-hour info line at 516-520-9311. (LIMARC)

**

HAMFESTS AND CONVENTIONS: NRC TO WEBCAST

The National Radio Club will hold its annual convention the Saturday and Sunday prior to Labor Day. N-R-C is a group made up of Medium Wave D-X radio listeners with the club founded back in 1933. And in past years the club has set up a carrier current radio station in the hotel where its conventions are held. Normally you cannot hear the broadcast outside the hotel grounds, but this year could be different. This is because the carrier current station will be helped by a broadcast remote pick-up channel that will be used to send the audio across town to a server that will distribute it as a webcast. The frequency to be used belongs to WLIO television in Lima Ohio. Fred Vobbe, W8HDU, explains what will happen.

--
W8HDU: "At the hotel we're going to place a small walkman radio connected
to an old remote pickup unit. The transmitter is on 26.410 in narrowband
FM, and it will relay back to WLIO's studios where the club will have its
server encoding the data stream. The transmitter runs about 40 watts into
a CB type antenna, and it IDs every 10 minutes with the call WPLP549. The
ID won't be heard on the webcast as it's filtered out at the receiver."
--

If you hear this broadcast, you can get a QSL by sending an accurate report to Fred Vobbe, W8HDU, in care of WLIO Television, 1424 Rice Avenue, Lima Ohio 45805. (NRC, W8HDU)

**

INTERNATIONAL-AUSTRALIA: VANDALISM AND BULLETS ON THE AM BAND

On the international scene, the staff of Brisbane Australia commercial AM station 4BH are in shock after what appears to have been a deliberate attack on the radio station's twin broadcasting towers. Q-News Graham Kemp, VK4BB, has the details:

--
4BH broadcasts on 882 kHz and although now a DMG music station is probably better known from it's "glory days" as the Queensland Key Station of the Macquarie Broadcasting Network.

Police are investigating an incident just before 9 o'clock Monday August 19 which saw both broadcasting towers have their guys cut with

what appears to have been bolt cutters, which sent them crashing to the ground, putting the radio station off air, and coming to rest just meters away from a caravan park.

The broadcast industry in Brisbane rallied around, SWITCH AM a public community access station at Long Pocket on 1053 kHz has gone "off air", donating their transmission facility to the Commercial station. 4BH was back on air just 27 hrs later at just some 800 watts, instead of their 5kW, using a retuned 1053 TX and tower, retuned thanks to Radio TAB engineering staff winding some 11 heavy duty inductors.

This incident is unprecedented and has ramifications for all commercial radio broadcasters and the Commercial Broadcasters Industry Association has said "While it is hoped that this situation will not occur again it may be advisable for stations to review, and where necessary, upgrade security arrangements at their transmission facilities".

This is the same site which saw thieves using bolt cutters gain entry to steal some 2 dozen satellite dishes belonging to Radio TAB early in the year. Allegedly the 4BH studios in suburban Stones Corner were fired upon recently, at least one bullet penetrating an office.

>From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Investigators have not been disclosed whether the three incidents are related. (Q-News)

SPECIAL EVENT: DRAKE ON THE LAKE

Back on this side of the Pacific, Greg Compton, N5ZFW, reports over the Internet that the Cherokee County, Texas Amateur Radio Club will be operating special event station called "Drakes On the Lake." This taking place the weekend on September 14th and Sunday the 15th.

The station, using all vintage R.L. Drake gear will be operated on the shore of Lake Jacksonville, which is near Jacksonville, Texas on 20, 40 and 80 meters. Callsigns to be used are AD5KM or KI5P. QSL with a 9 by 12 SASE to Brad Low, AD5KM, 840 Henderson Street Jacksonville, Texas, 75766. (From Internet posting)

**

DX

In D-X, members of the 8Q7ZZ youngsters' DXpedition to the Maldives have returned home after a highly successful operation. Mark Haynes, M0DXR, reports that the group made over 25,000 QSOs between the 30th

of July and 10th of August, including around 330 on 6 meters. The QSL manager for 8Q7ZZ is Phil Whitchurch, G3SWH. (GB2RS)

**

THAT FINAL ITEM: CELL PHONE RELIABILITY

And finally this week, a graphic example of how the cellular telephone network can hiccup at the most inopportune time. Earlier in this newscast, we talked to Andrew Young, N8ARY, up in Grand Haven Michigan. Andrew was using a cellular phone. One of the topics that he and our Producer Bill Pasternak, WA6ITF, were discussing was the reliability of these devices. Guess what happened next:

--
Pasternak: "It seems to me that more and more hams are carrying cellphones than HT's. Have you noticed that also?

Young: "Yes. Myself, I have a cellphone that rarely works when there is a busy time -- like during some sort of event. When a lot of people get in one area mu cellphone almost never works and usually I have t...."

Phone line sound: "click. click."

Pasternak. Hello.... Hello.... I think your cellphone stopped working."
--

Talk about a graphic example happening at the most convenient time. Thats right. The cellular phone system up in Michigan did what so many seem to do. It abruptly went away.

Ham radio is always there when you need it. Another good reason to always carry your H-T when you are out and about. (ARNewsline™)

A lot of the ag programming does not deal with market reports, most of it
deals with the programs of R & E, commentary, domestic advice, some
public affairs, wildlife, not to mention my favorite KKSU program:
Kansas Profile :)

On the contrary. Most people were not interested one way or the other, until
the spokesmen for morality and decency came on the scene. Then they see the humor.

The originator of the joke had a point after all.

Who knew that that resentment and offense-taking was lying in wait out there?

Around 1976 a station here aired "Fantasy Park" a daylong pseudo-concert with every imaginable band that was popular at the time... it was merely their regular studio recordings with audience sounds dubbed in, but many listeners thought it was for real and called the station asking where tickets could be purchased. Anybody remember that one?

GTT

The New York Post??? That's the print media's version of low class
radio. Remember that the London version of the company's papers prints
photos of real bare naked ladies. Hardly the high road for an apology.
When they do it in the New York Times I'll believe them.

>2) The TV commercial, which, according to some, depicts underage drinkers hiding
>beer from the police at a party, has been pulled.

So, the beer company was a perfect match for the show. An
irresponsible company advertising on an irresponsible show. Friends
tell me the beer is of the same quality as their advertising.

>I don't know broadcast law very well, but it's my understanding that the FCC gets
>very upset if you run a contest of any type which isn't really a contest.

Very true, but they don't revoke licenses for it. They fine the
stations and have stringent regulations about broadcasting the rules.
Clear Channel got caught not informing listeners their contests were
not local. They were fined and changed the information contained in
the rules. It's legal.

>4) There is little news as to whether the boycott will stick, but many Boston
>establishments have told Sam Adams brewery to take a hike for the present.

I wonder how many other establishments picked up the product,
considering it to be irreverent and cutting edge.

It'll be old news in no time.

>It's happening now, at least up here in Boston.

I don't see it as an attempt to minimize it. What the priests did destroyed lives. I see that as a far more serious offense than a stunt that was simply very bad taste and will be forgotten along with the many other bad taste things that have happened in that Cathedral. It's open to the public and is a major tourist attraction. I can only imagine the bad taste things that have happened as a result of millions of people a year passing through. I'll bet many people have had sex there. The only difference is that this time it was accompanied by a blow-by-blow radio commentary.

>Any radio station operator who breaks the law is subject to fines and
>revocations.

That's why those at fault were fired. To show the FCC the company didn't approve (wink, wink) of what happened. They're usually called scapegoats. If you don't want such things to happen you don't hire people famous for doing such things. Otherwise you takes your chances.

>When the radio industry gets slammed for it. Not issued minor fines which they
>construe as the cost of doing business.

The "radio industry" isn't guilty. The individual radio station is. Remember the $1.7 million fine the company paid for Howard Stern's relatively tame antics. At what point does a "minor fine" turn into a major one?

>> At the very least, I would have suspended, without pay, anyone
>> involved in the stunt. Just on a practical level I wonder what the
>> station would gain by such a stunt that would offend a city with a
>> huge Catholic population.

>Ask the President of Sam Adams brewery. He'll tell you.

I don't have to ask him. I can see the damage control in action. It's not very convincing, but it's fun watching a company guilty of awesome dumbness in sponsoring the "event" try to distance itself from it.

The shame of this stupidity is that other companies will rethink radio advertising and avoid it for fear of getting involved. Remember how successful the gay boycott of Laura Schlessinger was. Major sponsors

didn't want to be connected with controversy. Here's another reason not to use radio, so we all suffer for the stupidity of others.

>Right. Except they did a stunt in Boston (broadcast hoax) as a joke, were >dismissed. If the FCC just lets it go, the radio industry will just go on as >it always has. When the heat's on, they'll just fire the (I hate to use this >word) "talent" and move on to something else.

>Until someone's prosecuted and a license is revoked, expect more of the same.

The copulating couple will probably get hit with a small fine for public indecency. The shame is that they admit it wasn't even much fun. At this price it should have been multi-orgasmic. It reminded me of the restaurant scene in "When Harry Met Sally" where Sally was faking an orgasm at the table and a nearby customer said "I'll have what she's having."

The "reporter" was simply commenting on an event. In most circles the "event" would qualify as a news item, probably protected by the First Amendment. If a reporter from WINS were to come across such a thing the station would probably report on it. Certainly in better taste but it would be news.

I believe the FCC might issue a fine but, since the station took immediate action, I doubt there would be enough political support to revoke the license. Don't forget, the company can do politicians great harm at election time. Remember, also, that the "talent" was the only act keeping the station alive. I took great testicular fortitude (copyright Gene Burns) to fire them.

At any rate, any attempt to revoke the license will involve years of litigation. It's a New York station worth hundreds of millions. Would that punishment fit the crime? What should the fine be to ensure it would scare the hell out of the industry? Real devastation would be when listeners get fed up and stop listening. There can be no more serious punishment than that.

My guess: expect more of the same. I'll bet most everyone listening was riveted to their radios. Most who complained were probably just jealous.

Joel Hermann <jhermann@dtgnet.com> had written:

| Actually, the SCA services are largely passe, replaced by the DTN satellite
| service.
| I don't think there are any SCA-delivered services around here anymore.
| Bonneville had one, but it's been gone for years. And we used to have a Farm
| Bureau-operated service on our SCA, but it's been gone for a number of years.
|
|Any farmer that interested already has a little dish and is getting all the
|market info, weather, etc. from DTN. And DTN subscribers can also get the
|same info on the internet. Some of the market info isn't as important
[...]

Had to clip because of line length ... but thank you for
articulating another point I wanted to make, and didn't really have
the information to make it. That point is the availability of satellite
services in addition to other things.

There are a few SCAs in San Francisco, by the way, with the
following data collected from a quick spin of the dial with a
Superradio III mod:

88.5 KQED - data
89.5 KPOO - Russian-language @ 67 kHz
91.5 KALW - Chinese-language @ 67 kHz ... former 92 kHz is gone
94.1 KPFA - Indian (Asian) @ 67 kHz ... this is new w/n last 6 mos
100.3 KBAY - ethnic (Indian?) @ 67 kHz
103.7 KKSF - data
106.5 KEAR - Chinese-language @ 67 kHz; Korean-language @ 92 kHz

So with a couple of exceptions, most of the SCA activity is on
noncomms around here.

| One more that I know of:
| KDEC (commercial) and KWLC (non-com, student run from Luther College)
| on 1240 in Decorah, IA.

I didn't know that was still going!

> So, no, I would not like broadcasting to stop. I only want IRRESPONSIBLE
> broadcasting to stop.

Irresponsible according to whom? When you start to filter, then someone has to ultimately set the standards. Who would that be? You? Me? That mid-western farmer? The pawn shop owner in Manhattan? A committee? Selected by whom?

> You're missing the point. This was not a content issue. It's a CRIMINAL
> issue.

That is still content. The station wasn't operating over-power. It wasn't off-frequency. You are complaining about what was presented on the station's modulation. That is called "content".

> Broadcasting can be done responsibly -- without having to super-sanitize
> everything.

How?

> As I said, bad tastes sells. But -- criminal acts shouldn't.

Criminal acts should be prosecuted under the law.

Do you want to live in a rubber room or get an itemized bill for each and every action you take during the day?

> So what you're saying - anything goes! And there should be no test of
> responsibility. Encouraging people to have sex in a church and broadcasting
> it on
> air, that's OK!

No, that is your rhetoric to attempt to discredit what I DID say. I say, in case you missed it, that anything goes. Those responsible for any and all REAL consequences should be held accountable. There is no Constitutional right to never be offended.

> Now - "offensive material" --- even if you weren't listening - the "offensive
> material" took place in a house of worship, entailed illegal acts, and
> affected a
> hell of a lot more people than those listening to the demented programming

But who was actually harmed in a real way? Again, with feeling: there is NO Constitutional right to an offense-free existence.

> A broadcast hoax, or dangerous, or illegal stunt, has the potential to
> affect
> many more people than the idiots who enjoyed the sick programming on stations
> carrying O&A.

Some hoaxes are cruel and mean. When broadcasters commit them, they are reducing their own credibility. That is something they will have to deal with at some point. But people can recover from hoaxes and those who cannot had some pre-existing problems...and perhaps SHOULD be living in a rubber room.

You don't confiscate tens of millions of dollars worth of property because someone's feelings were hurt. Try to get a sense of scale.

Terrific. Buckley isn't exactly America's sex symbol. The thought of
Buckley having sex is beyond comprehension unless it was accompanied
by a conservative panel analyzing his technique and the contribution
such an act would give the Conservative cause. Kinda unsexy.

>Does anyone know of some stations that don't bleep and don't mind this and can will play this late at night?<

Any station that is willing to pay a fine for obscene language would be more than willing to run your program.

You're confusing obscenity with indecency. The former is NOT protected by the First Amendment; the latter is. Broadcasting obscene language gets a station fined.

>I've always assumed safe harbour wasn't something officially set up... am I wrong?<

Yes, you're wrong. The so-called "safe harbor" for indecent programming (NOT for obscene programming) is 10 PM to 6 AM, local time. See 47 CFR §73.3999.

However, that will not protect anyone who programs scatalogical language, which is considered obscene, at any hour, since the Supreme Court has ruled that obscenity is not protected by the First Amendment.

But the fictional reporter would not be working for the station that ENCOURAGED the act in the first place. WNEW didn't just stumble across news, they created it! Big difference there.

And yes, Infinity knew who they were hiring. The dynamically dumb duo moved to NY soon after the fiasco in Boston. I blasted them at the time and they deserved it. I hoped maybe they learned their lesson, but apparently not. Personally, if there won't be a fine against Infinity, I'd love to see a fine against the dopes themselves.

You want to tell that to KWK in St. Louis, which got its licence revoked in
1965 after a case of contest fraud. See Mark Roberts's history of KWK:

The point is the reaction. The tut-tut'ers are brought out to tut-tut.

Who would have guessed there were people who still thought of themselves
that way?

That makes it political speech, almost; to politically annoy the
moralizers-by-force-of-law.

I would be willing to bet that if a TV network televised an execution on an unauthorized basis, or put a camera in a bedroom and broadcast live sex, unedited, there would be more viewers than ever before in the history of television. There would also be a public outcry the size of Texas.

This country's schizophrenia knows no bounds. It can't resist a good auto crash or train wreck, but then decries violence and sensationalism. Prudish noses are perpetually up in the air, but sex scandals consume the attention of the public at large.

Radio stations do this because it gets attention. There is no such thing as bad publicity. The greater the righteous indignation, the better as far as the marketing people are concerned.

I have long since enjoyed watching the public squirm over "offensive" material!

Yeah, but 1965 was 37 years ago, and, as I recall, the FCC did not at that time have the authority to issue fines. The only penalty was the death penalty (which often took years and years to "execute" 'cause the station has plenty of opportunities to try to refute the FCC charges and show that it was fit to continue to be a licensee. I can think of only four or five license revocations ever--there were probably a few more. KWK is one. At least two others involved stations owned by a guy named Don Burden, KOIL in Omaha and, I think, a station in Indianapolis and one in the northwest. So, in the pre-fine days, there were essentially two ways to lose a license. The FCC could revoke it (very, very rare), or a would-be licensee could cross-file against you at renewal time, claiming that he or she would be a better licensee that you. Cross filings were and are extremely rare and almost never succesful.

The purpose of the fine authority is to provide the FCC with an enforcement weapon less severe than the death penalty and more fitting to the myraid "crimes" that a station might commit. You see, a $20,000,000 fine (revocation of a major market license) for, say, obscenity or a dicey contest is, justifiably, seen by many as a tad severe. Keep in mind, if the FCC slaps a straight revocation order on you, you are done, your investment is totally lost, you have nothing but your phsical plant to sell, And it's worth zip compared to the license (and may, in fact, be worthless).

Best,

Don

I don't think you're going to see much come of this. It wasn't a contest like the ones that ripped up libraries because there was money in some of the books. It was a sex act in a tourist trap. The Cathedral has been the target of demonstrations and other incidents that happen at such places.

Understand that the Diocese of New York has often involved itself in political life of the city. It's more than a church and, as such, makes itself a target for all sorts of things.

I don't know who you are because you use a phony name. As a result I can't make a determination about how powerful or influential you would be in "blasting" anyone for anything. Are you so influential that Infinity would change anything based on your blasting of them? After all, Infinity has been blasted by the best of them and it rarely changes its direction as a result.

I believe the "talent" are protected by the corporation. They were hired to do what they did. It's the licensee who bears the responsibility for anything it airs. The "talent" were nowhere near the event. They lost very high paying jobs. It seems to me they've already been fined an amount far greater than the law would require.

The bottom line is that sex was performed in a religious institution, a place where, I'll bet, the employees and officials of that institution performed it often, usually with young altar boys. It seems awfully hypocritical for the Catholic church to condemn such activity. Finally, heterosexual activity in the church! This church has been rabidly anti-gay. They should be happy the copulating couple was straight.

It was in extremely bad taste, for sure. The reaction to it has been blown all out of proportion.

Rich

It says: Prizes in these contests, said the FCC, were not hidden until
late in the contest period and "consequently it was impossible for any
person to find the prize during a substantial portion of each period."

I don't see a correlation between the two. KWK was clearly fraudulent.
Copulation in the Cathedral was less a contest than a stunt.

Indecency is protected, but limited to "safe harbor" hours. Obscenity is not
protected. Profanity falls in the "indecency" category in most cases.

Profanity is neither obscene nor indecent. It has a very precise purpose
and is finely calculated, in ordinary life.

Were there no taboo words, we would have to invent them again, so useful
are they. Translations of taboo words are not taboo in other languages:
each comes up with its own. The referents don't matter (unlike obscenity and
indecency).

The most common purpose of profanity is to assert a certain relationship
between speaker and hearer, that dispenses with formalities and may speak freely
at any level at any time. It's _rude_ to take that liberty where politeness
ought to prevail, and formalities should be respected.

That in turn makes it possible to be rude! And that's the use of profanity.

I don't see how profanity falls under indecency.

Obscenity: the "7 dirty words" and derivatives of them. Though no one seems to care about saying "piss" anymore. I'm even hearing titty (which would deride from "tits" of the 7).

Profanity: calling the wrath of ANY given deity onto an individual. ex: "god damn you". "Damn you" is still cool though.

Indecency: Tough to define, but easy to trigger. Essentially anything considered to be explicit, or vulgar. It changes with the times, but sex and violence seem to be the flagship. The exceptions, of course, are when they are talked about for educational reason. If you've ever heard "Loveline" or a similar program on the rare occasions where the doctor isn't present, it gets pretty tame.

Crowell Collier divested, just as RKO radio did. The CC licenses were never pulled; they were sold. There were never any filings for the frequencies by new applicants... for example, Westinghouse bought KFWB form Crowell Collier and made it into a news staiton.

The CC problems, which were nmanagement related (billing, particularly) at KFWB, occured in 1959. They were cited in the FCC decision in 1960 to deny the sale of 1010 AM in NY to CC. At that point, the ocmpany started losing interest in radio, having sold the stations they had by around 1967.

I presume it is a typo, but the Mpls./St Paul station on 630 was KDWB.

Uh...yes I have. Please quote the portion of the U.S. Constitution which
has the seperation of church and state of which you speak. The First
Amendment states that the Congress shall make no law respecting the
"establishment" of religion. That is not a total seperation of church and
state. So please, tell us where you get that from.

The laws of the United States. The regulations in place and already defined by the FCC. The laws of the states where the broadcasts occur.

Breaking those laws or violating the regulations already set in place should bring action.

Do you want me to spell it out any clearer? I sense a serious comprehension problem here.

BREAK THE LAW AND FACE THE PENALTIES.

The laws were (allegedly) broken.

> No, that is your rhetoric to attempt to discredit what I DID say. I say, in

> Omaha and, I think, a station in Indianapolis and one in the northwest.

Burden bribed a Congressman to get things expedited at the FCC. He lost KOIL
in Omaha, WIFE in Indy, KISN in Vancouver/Portland and KBTR in Denver.

In the 60's as well, WGCB in Red Lion, PA, lost its licenses due to the
licencee, Rev. Dr. Norris' refusal to obey the Fairness Doctrine. A daytime
AM in South Carolina, on 1310 as I recall, ins a town called, maybe,
Kingswood, lost its license due to fradulent billing. KRLA in LA lost its
license due to owenrship rule violations. WOOK in Washington lost its
license due to, among other things, allowing numbers rackets to use chapter
and verse citations in religious programs to conduct illegal gambling
operations. WFAB in Miami lost its license due to fraudulent billing and
lack of candor.

Recently, the licensee of several IN and MO stations lost them due to a sex
perversion conviction that rendered him unfit int he FCC's eyes to be a
licensee.

There were others; I just can't remember them.

Most had to do with fraudulent billing, lack of candor and unfit character
qualifications.

> So,
> in the pre-fine days, there were essentially two ways to lose a license.

> almost never succesful.

Actually, there were a number of successful cross filings. WRSJ-FM in
Bayamon, PR, was filed against in the late 70's for technical violations en

masse and lost its license. The rulemaking following the filings on top of the Bonita Springs FM in the early 80's produced the relaxation of rules that allowed move-ins and upgrades of class without opening a filing window. There were maybe 20 filed agianst and lost licenses, most due to gross shortcomings of the licencee.

A lost but hard fought battle was over WOJO-Evanston, IL. A cross-filer claimed the spanish programming served Chicago, but not the city of license and was, anyway, not needed as much as his intended hard rock format. It took years to settle, and cost perhaps a half-million in lawyers' fees. I was an expert witness in that one, and jut one of the hearings went on for 10 days in Chicago with an FCC Administrative Law Judge present.

I don't see the connection. Is any "profane" word on the "obscenity" list?
No? Then how is "profanity" "obscene"? As far as I know, profanity can
freely flow during safe-harbor time.

You'll have to come up with a better argument than that.

Much of what many like to call art and expression is really nothing
more than an effort to offend. They then justify it by saying exactly
what you say: "The Point Is The Reaction."

The problem with this way of thinking is that it lacks boundaries and
purpose. If I get offended from their "Reactionary" art and I destroy
the art that elicited my reaction, does my reaction become part of
their art? Do they deserve compensation for the very behavior they
elicited from me?

To me, Free Speech should have a focus. For example, NAMBLA, as
repulsive and disgusting as I think they are, argues for a specific
cause. As such, I think they have a right to point out their opinion,
no matter how much it offends me.

But when you say "The Point Is The Reaction." You're basically
admitting that there really is no other intended purpose for this
expression besides offending someone. This is what rides dangerously
close to what is known in legal circles as "no redeeming value." I
think I could even make a case that declaring "The Point Is The
Reaction" is the very definition of "no redeeming value."

>That makes it political speech, almost; to politically annoy the
>moralizers-by-force-of-law.

It's ALMOST political speech; but it's not. Political speech has a
point to make. What point is made with an effort whose sole purpose
is to annoy a group of people? Where is the redeeming value?

Opie and Anthony's stunt rides awfully close to this standard. I
happen to think that the real perpetrators were the stupid listeners
who exposed themselves in a church. Yes, O&A encouraged obnoxious
behavior, but they weren't specifically asking for anyone to expose
themselves in a church. That's the only reason they should be allowed
to continue on the air. Encouraging stupid behavior in what was
intended to be funny and creative shouldn't be a crime. Clearly they
need to think about their delivery technique, but that's a matter of

art...

I wonder about 700 Walkersville, MD, which is moving COL to Poolesville, MD, increasing to 25 kW DA-D aimed straight at Washington, DC, already changed its call to WGOP, and is building studios __IN__ Washington, DC. There is clearly no intention to serve Poolesville, a smallish outer suburb a bit off to the side of their new pattern. Their new transmitter location will be about 20 miles north of DC.

They have switched from Arabic to conservative talk plus Greaseman. I doubt if there were more than 10 Arabic-speakers anywhere near their previous COL.

The same owner is working on moving WDVM 540 about 100 miles from the lower eastern shore on Maryland to be licensed to a crossroads between DC & Baltimore. The transmitter location is to be the same as WGOP. The reported intention is to move the talk from 700 to 540, since it would be full-time, though lower power.

But we all know that peripheral stations are generally aimed at the larger market, even though they use the fiction of "first local service" in obtaining their license. Certainly not news.

Probably in the early 90s, Imus somehow got a random topless bar
dancer being interviewed in the course of some man-in-the-street
excursion; she was a Columbia University political science major
and they talked Middle-East politics for the entire segment, perhaps
the nicest send-up of himself and Stern ever done.

Rich, that's a bit extreme, even for you. You're saying in effect
that the market justifies the behavior.

Well then, using that as an excuse, what's wrong with selling
narcotics to minors? There is a big market for this stuff, you know.
Do you have to believe that this is a public service just because the
market exists?

I tend to agree with your previous postings that nothing much will
come of O&A's show except perhaps a slight loss of advertising
revenue. However, your position of "freedom of speech" is a long way
from "anything for money." This is where your opinions and mine
diverge.

Leaving no nit unpicked, I believe that the Miami station was no longer WMYQ when the license was lifted for fraudulent contesting; Bartell had evolved into Charter and the station was then WMJX. The contest irregularities on WMYQ ("The Magnum contest") were dismissed with a warning in 1973, but about 3 years later, the station did a hoax about the whereabouts of jock Greg Austin who was "lost in the Bermuda Triangle." This time the license went, with the Tucson KIKX missing jock contest being cited as precedent for revocation.

I didn't say profanity was obscene.
You said this in the message that I was reponding to:

Quote: "Profanity falls in the "indecency" category in most cases."

My point was no, it is not in the indecency category. It is nether indecent or obscene, it is profane. Hence the regular use of the term "O.P.I". You have the 3 choices of obscene, profane, or indecent.

Bailey

It doesn't work that way. These people have been granted a special
privilege allowing them to use the public airwaves. They hold no
proprietary rights in their licenses; look at any broadcast station license
and you'll find language stating exactly that. If the public, through its
designated representatives, sees fit to withdraw that privilege it has
the right to do so.

But as to specific rules, the indecency rule comes to mind. How many
times has Infinity been fined for violations of that rule? Willful
and repeated violation of FCC rules is sufficient grounds for revoking
a license.

I'd like to see Infinity stripped of all its licenses. Make an example
of 'em, and the others will start behaving like responsible adults.

> freely flow during safe-harbor time.

What is missing is "context." The f-word can and is used outside the safe harbor in theproper context, such as a discussion of contemporary values and language. The same word can be indecent in a different context. The FCC has no list of "dirty words" but does fall back on "community standards" and context almost every time an indecency/obscenity issue is raised. There are definitions, albeit vague, on the FCC website under the Public's Guide to Broadcasting or somesuch.

In part, here is what it says:

Obscene speech is not protected by the First Amendment and cannot be broadcast at any time. To be obscene, material must have all three of the following characteristics:

a.. an average person, applying contemporary community standards, must find that the material, as a whole, appeals to the prurient interest;

b.. the material must depict or describe, in a patently offensive way, sexual conduct specifically defined by applicable law; and

c.. the material, taken as a whole, must lack serious literary, artistic, political, or scientific value.
Indecent speech is protected by the First Amendment and cannot be outlawed. However, the courts have upheld Congress's prohibition of the broadcast of indecent speech during times of the day when there is a reasonable risk that children may be in the audience. Broadcasts that fall within the definition of indecency and that are aired between 6:00 a.m. and 10:00 p.m. are subject

to indecency enforcement action by the FCC. Indecent speech is defined as "language or material that, in context, depicts or describes, in terms patently offensive as measured by contemporary community standards for the broadcast medium, sexual or excretory organs or activities."

Profanity that does not fall under one of the above two categories is fully protected by the First Amendment and cannot be regulated.

Old-timers may disagree, but I'd have to say that if you want a good car radio for AM DX, you're about 20 years too late.

The first car radio I DX'ed with was a Delco mudmeister in the dash of my father's '68 Impala. It was pretty good in terms of sensitivity, selectivity, s/n, etc. The next one was also pretty good, an OEM Philco in my 1973 Galaxie 500. After that, it's been a waste of electronic-grade silicon. The new receivers suffer from poor image rejection, phase noise, capture ratios fat enough to fly an A380 thru, amongst other ills.

I'd like to invite comment on this from overseas, as well. Back in 1994, I had a Fiat Punto with a Becker LW/MW/FM radio ant one of those ultra-small antennas in the upper rim of the windshield, sort of like on the Ford Focus. I only got to DX with it one night from Normandie, and my best DX was Radio Monte Carlo!

Absolutely. My daughter is in the Army in Germany and insisted on taking her Saturn to Europe. I called Saturn (customer support) and asked if there was a way to do that - convert the radio to a 9 khz split, and also the FM radio to work on 100 khz splits ... they didn't know how, but she gets enough stations anyway....

>Rich, that's a bit extreme, even for you. You're saying in effect
>that the market justifies the behavior.

No. I'm saying I've met people who believe that topless dancing is a public service. I can't remember the last topless bar I was in (I drink only socially in restaurants and hate cigarette smoke) and have never had a lap dance, so I can't say from personal experience exactly how I'd describe the "service." Pubic service, perhaps.

I just find it funny that there's such an outcry over a natural act being performed in the same place as child molestation. The two acts aren't comparable and the punishment for them should be appropriate to those acts.

Why are my opinions extreme? They seem rather rational to me.

>Well then, using that as an excuse, what's wrong with selling
>narcotics to minors? There is a big market for this stuff, you know.
>Do you have to believe that this is a public service just because the
>market exists?

Actually, greater minds than mine have seriously suggested making drugs legal. Not being involved with drugs I can't say what the result would be, though it would seem to eliminate the extremely dangerous way that market operates. Personally, I don't even want to be around those who use drugs, so I'm not an objective judge of that marketplace.

It annoys a group of people who want to rule by force.

It can have a moral point: ``morality is not so simple-minded as you guys think. It requires work, effort and sacrifice. The rest is moralism and isn't worth anything.'' That's why you want to annoy moralizers, even bring them out.

A similar point is made by flag-burning, but about patriotism and its bogus forms.

>Yes! that what he and his ilk have always said (Republicans no doubt).

...and so am I. Why should that be an issue? This is not so much about party politics as it is an ethical issue.

The bottom line is that the radio broadcast industry clearly doesn't have a standard such as yelling "Fire" in a crowded theater. There are no clear guidelines. Although I'm not trying to put words in his mouth, I suspect that many such as Rich Wood believe that without these standards or other social contract, anything goes.

Thus, at least to Rich, the market justifies the activity. He even suggested that all drugs should be legalized. I notice he didn't go so far as to say that they should be legalized for minors. Clearly, Rich must have a standard of decency lurking somewhere in his head. However, I'm not interested in chasing it down to see just what sort of depraved behavior would be allowed under that standard. I suspect his tolerance of such things is far greater than mine.

Here is the problem with this "market justifies the activity" position: A lack of standards doesn't imply that you or anyone else should program with a lack of ethics. Money may drive your day to day decisions, but it's ethics that keeps people in business over the long term.

People listen to Opie and Anthony for the same reason they rubberneck when there is an accident on the other side of the road. For many it's fascinating to listen to these dopes self destruct. And then, when it actually happens, these same people can pretend to be shocked, surprised, and offended when they actually hear something so obnoxious the radio hosts get fired. Meanwhile, the radio station ratings go through the roof.

Frankly, if I was in Marketing, I'd really question whether sponsoring that sort of program is a good idea. But then marketing is often the least respected part of business. Nothing I see from that side of business surprises me any more. For my own sanity, programs like that are the last place in the world where I would want to spend my advertising dollars. But that's just me; I'm an engineer, not a salesman.

Finally, the difference between a car wrecked on the other side of the road and this nonsense is that the car wreck is almost never intentional. The O&A team know exactly what they're doing, as do the stations that carry them, and the people who listen to this awful dreck. I think that those who say otherwise are deluding themselves just so that they can look in the mirror every morning and not flinch in disgust.

Peace.

Then TURN OFF the radio and stop presuming to dictate to others what they
may or may not hear.

> ENOUGH!.............add some brains and
> civility to fucking radio!!.............There must be more than NPR out
> there surely!.............Step up the plate and produce quality programing
> dammit!

I have stepped up to the plate. I support my local community stations in
effort and funds. I am on the board of one of them, and have contributed
my time, expertise, and my personal influence with commercial broadcasters
who have donated everything from equipment to STL channel space at my
behest. I support quality radio, and I put my money, time, and influence
where my mouth is.

What are YOU doing to put quality programming ON the air, other than
griping in a newsgroup about how you want everything you don't like taken
OFF the air?

Hmm. I think you need to reread my post. I recall saying "greater minds than mine have suggested ..."

I neither advocated legalization for minors or adults. I simply said it might remove the very dangerous activities associated with drugs being illegal.

>Rich must have a standard of decency lurking somewhere in his head.
>However, I'm not interested in chasing it down to see just what sort
>of depraved behavior would be allowed under that standard. I suspect
>his tolerance of such things is far greater than mine.

I challenge you to show me any standard of depraved behavior I've ever allowed on any station or network I've ever run. I don't recall WOR ever being accused of either depraved programming or the promotion of such things.

The ABC Talkradio Network never advocated such things while I was there, nor did Tom Bodett's "End of the Road" show (which I produced).

Your level of intolerance appears to be very high, so you may be right that my level of tolerance of a lot of things that don't harm people is significantly higher than yours.

What I'm willing to do on my radio stations and networks is very different than what I'm willing to tolerate on other people's stations.

Most people in the Talk Radio side of the industry know what kind of programming I'll tolerate. No one of any significance in the industry has ever accused me of having a lack of ethics or integrity. That only happens in newsgroups by people who know nothing about my programming.

Rich

Yeah, but Mr. Powell is the one who ENFORCES the rules. His interpretation of the rules are probably going to be somewhat different from YOUR interpretation, and the Commission's interpretation.

Fortunately - their interpretation is the one that's going to count, and if yours differs from theirs, it won't count.

Powell and Copps are spinning their wheels at www.fcc.gov. Read all about it. Download the *.pdfs. They're there.

And, I'm not hoaxing you as a joke. Certainly WNEW(FM) isn't taking it as a joke.

>hospital, then what?.............Radio still blameless I'm sure..right Rich?

That's quite a stretch, but I'll go with it. Just like in this case, the "talent" was fired. It's awfully hard to anticipate what talk show hosts are going to say. You assume they'll be responsible and, every once in a while, you get burned. You act on what they actually do, not on what they might do.

I agree that the Boston stunt was cruel and I would have fired them on the spot, regardless of the ratings they brought to the station.

In the case of the Copulation in the Cathedral (sounds like a Jackie Collins title) it hurt no one. Unless, of course, listeners rushed to the Cathedral to watch it happen, pre-orgasm, and died in car wrecks. I can picture traffic on Fifth Avenue if every listener were a voyeur. Car wrecks all over the city.

We just can't get around it: the real pro in this kind of radio is still Howard Stern. He goes right up to the line but never goes beyond it.

>> The shame of this stupidity is that other companies will rethink radio

>GOOD.....maybe radio will FINALLY start offerning compelling programming
>after all these years fo miserable dreck hate-rant-shit.

What would you consider compelling programming? Instead of obscene ranting why don't you offer us some ideas? What do you want to hear? Personally, I like Charlie Rose a lot but I can't imagine his show attracting enough listerners to attract advertisers.

Give us a list of great ideas that are commercially viable and I'm sure someone in radio will give them a try. But please, leave out the obscene words that the FCC won't let us broadcast.

You talk about dreck, then shower us with it.

Rich

I have several station licenses in my hand. Could you point out on which
page it says that? I see things like "hours of operation" (unlimited),
transmitter and antenna parameters, but nothing that talks about "rights".
Do I need to heat the paper up to bring out that language?

> If the public, through its

For cause, based upon law and regulation.

> I'd like to see Infinity stripped of all its licenses. Make an example

I don't know how to tell you this, but Infinity is one of the more
responsible broadcasters overall. The message you would send is that
license revocation is nothing more than a capricious activity based upon
individual whims.

Is that how you REALLY want broadcasting to be run?

I will not condone what Opey and Anthony did, and yes Infinity should be fined heavily....like maybe 10 to 20 million...that would hurt pretty hard and make them think twice next time! But I must make a point here about how the FCC treats Radio and TV differently. How come network TV can show nudity and voice many of the 7 dirty words, in prime time...over the air, not cable, yet nobody is up in arms about that! So why is everybody so upset about one stunt on radio when we can SEE the same thing nearly every night on TV. They just dress it up and call it drama.... Maybe radio should go back to the old days of radio dramas, then we could do whatever we want!

Oh for the good ole days....that never really were all that good.

As I said to someone else in here, the airwaves are public. Some in here
don't want anyone to know that.

> But as to specific rules, the indecency rule comes to mind. How many
> times has Infinity been fined for violations of that rule? Willful
> and repeated violation of FCC rules is sufficient grounds for revoking
> a license.

Many times -- but as I said some time ago, umar, they perhaps viewed those
fines as a routine cost of doing business. It is not unlike a guy who owns a
high-powered Porsche and has a little problem drinking too much fine wine.
He gets caught speeding too often, and often with a little alcohol aroma on
his breath, but merely views the fines, insurance points, and attorney's fees
as a routine cost of owning such a car and enjoying the sauce.

>
> I'd like to see Infinity stripped of all its licenses. Make an example
> of 'em, and the others will start behaving like responsible adults.

I'm glad someone else shares a similar ethical train of thought, umar.

The defenses I hear against license revocation are what one lawyer used to call
"Tiny Tears" -- it plays out like this. A lawyer has a client who may have
been convicted of drunk driving, or even leaving the scene, etc. After
conviction and pre-sentencing, he gets up and gives an emotional speech -
"putting my client in jail will serve no purpose. My client has suffered
ENOUGH! He has lost his car, has had to stand trial, blah blah blah" --
then the slug's mother, children, wife are all crying in the courtroom.

The plea doesn't usually work. Why not?

Because punishing the guy will serve as a lesson to him, and, most of all, a
deterrent to others who might think of engaging in the same behaviors.

This crap is going to continue until someone gets their license hit.

Rich did not say that. I intepreted his statement to be more along the lines
of a questioning of the vague standards and the futility of having anything
but the community and competitive situations regulate what is entertaining,
proper and acceptable and what is not. Any attempt to regulate content is
far more pernicious than letting those who pass the line discover that
advertisers defect and listeners in the vast majority do, too.

Rich used the drug issue to show that nothing is black and white. He pointed
out that there are some who would decriminalize drugs, and that their
justification is a reduction of the associated and concomitant criminal
behaviour. And there is a point / counterpoint situation there that is
worthy of discussion; you, it appears, would prefer to quash such
discussions.

I actually tood a class in school called "ethics" which went back to tribal behaviour and the ancient Greeks. The conclusion is that even in highly cohesive societies, ethics is defined by age, sex, occupation, faith, etc. In other words, ethics is not a static, tangible quality even in the "best" of cases.

Actually, to the target audience, on most occasions, O&A were truly entertaining. They were not to me, however. But I am not in the target.

Except for a couple of stupid incidents, most of the O&A content was, frankly, juvenile and not particularly "out there."

The fact that ratings go thorough the roof may also indicate what many sociologists and students of the mass media have long said: the media reflects taste more than it creates or changes it.

Keep in mind that I find, resident pedophiles or not, incitement to commit sex in a church particularly tasteless and pretty offensive. But I am not "everyone."

Companies like P&G don't buy talk. I think tha tis over reaction, but within their rights. there are plenty of clients to go around, and Stern has proven that for ever 20 clients, there are 15 who will not buy him but the 5 that do are well matched with his demo and content.
>

I would be that O&A were not trying to get away with anything. To this day, they probably think their contest and stunt were pretty entertaining. And probably 99% of their numerous listeners did not find it offensive. I did,

but I don't listen.

I remember when folks tried to cause problems for radio stations that played rock and roll.

The more things change, the more they stay the same.

>bring them out.

Moralizing is extremely dangerous. Moralizers usually get caught.
Jimmy Swaggart was a moralizer. He got caught with hookers in a motel.
Henry Hyde was a moralizer. During the Clinton fiasco he had to admit
to nearly the same kind of infidelity he was supposed to be
investigating, as did several other legislators who were forced to
admit their failing before the press made them public.

Whenever I see a moralizer I wonder what kind of immorality he's
guilty of. Priests are moralizers. Children are molested. Churches are
moralizers. They protect the priests.

It would seem that running one's own life should be hard enough
without taking on the responsibility of running others'.

> his tolerance of such things is far greater than mine.

There is a major point here. My standards are my standards. Your standards are your standards. Rich Wood's standards are Rich Wood's standards. Even Gaffo's standards are Gaffo's standards. Each person's standards dictate his own, personal conduct and participation in life. No one else has to actually know what they are.

So let's look at standards. I think shock radio is, for the most part, a boring waste of time. It is dreck. O & A, while I've never heard them, probably fall into this category. So I don't listen, which I why I have never heard them. (What a concept!) But there seems to be a contingent that obsesses over bad programming rather than simply ignore it (or proactively support good programming). The only apparent motivation is the desire to dictate to others what they may or may not hear. Otherwise, what is the point of all the brouhaha? If people want to listen, they will. If they are offended, they can blame themselves for choosing to listen. Those who don't like it can avoid it. Seems pretty clear to me.

If there is any law violation involved, let the authorities handle such events as they would any other situation where law-breaking occurs.

If that is true, then ultimately the tasteless shows will fall from natural causes, like lack of listenership or other advertising-effectiveness issues.

None of this would ever appear on a station which I owned or had any control over. But that's just me; I'm an engineer, not a salesman. What others do, however, is what others do. I'm not their nanny, nor do I expect my government to be their nanny.

> Finally, the difference between a car wrecked on the other side of the

Again, however people want to justify their own actions is between them and their consciences. The last thing we need is to have government act as Mom.

I quite agree with you about moralizers, as improbable as that may seem
in light of some of my other posts.

On the other hand, I don't think it's fair to tar all priests with the
same brush. The news media are forever digging up scandal and sensation;
if there are 99 faithful priests for every one that breaks his vows, the
media will still make the whole Church seem rotten to the core. But
things are never as bad as they seem; there is not a terrorist on every
street corner, nor a gun-toting mass killer in every schoolyard, nor a
predator in every parish. These sorts of things are the rare exception
not the rule.

>It would seem that running one's own life should be hard enough

station nor any right in the use of authorized frequencies beyond the
term hereof, nor in any other manner than authorized herein. This
license is subject to the right of use or control by the Government
of the United States under Section 706 of the Communications Act of
1934, as amended."

>I don't know how to tell you this, but Infinity is one of the more
>responsible broadcasters overall.

How many times has Infinity been fined for violations of the indecency
rule? Let's see:

(from http://www.fcc.gov/eb/broadcast/obscind.html)

06-07-2002 Notice of Apparent Liability -
Infinity Broadcasting Operations, Inc., WNEW(FM), New York, NY ($21,000);

05-24-2002 Memorandum Opinion and Order -
Infinity Broadcasting Corporation of Los Angeles, KROQ-FM, Pasadena,
CA (M.O.&O.);

03-22-2001 Memorandum Opionion and Order -
Infinity Broadcasting Corporation of Los Angeles, KROQ-FM, Pasadena, CA
(M.O.&O.);

03-02-2001 Forfeiture Order -
Infinity Radio License, Inc., WLLD(FM), Holmes Beach, FL ($7,000)

12-05-2000 Notice of Apparent Liability -
CBS Radio License, Inc., WLLD(FM), Holmes Beach, FL ($7,000);

06-13-2000 Forfeiture Order -
Infinity Broadcasting Corporation of Los Angeles, KROQ- FM, Pasadena, CA
($2,000)

... and that's just in the past two years. Responsible, you say? I
say "willful and repeated".

>Is that how you REALLY want broadcasting to be run?

Is this how *you* want broadcasting to be run?

> is significantly higher than yours.

Your tolerance of hate-rant bigotted mean spirited speech is harmful to people. The very shows you defend create a mean selfish and insensitive society. Try creating beauty and helping our sick society, don't contribute to its cancer.

The vitriol on AM is sick and petty and evil - yes evil.

Good!!!!!!! Sadly for evey one guy who supports local radio and quality,
there are 100 Clear channel suits doing the opposite. Soon there will be NO
local radio anywhere in the US. TeleCom must be repealed.

And that is the problem! We all know that. $$$$$$$$ talks and that means low-brow. BUT low-brow need not be hateful. Radio's hate-filled shock-jocks are alot moreso than 30-yrs ago, while TV has generally not gotten worse.

Such shows contribute to our ills, and should stop. Offer more "handyman shows" (Glen Higgy type stuff), more financial stuff (Motley Fools trype stuff), some gardening shows, some pet-care shows, lake wodigone-type stuff/etc.................shows that HELP folks, not mean-spirited stuff!

There are so many things which could improve radio, but I'm sure not seeing it. The above shows are very hard to find on my radio dial. Glen Higgy is just gone! (he was great BTW).

>
> Give us a list of great ideas that are commercially viable and I'm

Nope anyhting new is too risky........so just more hate-rant is to be expected. At this point folks would be happier without radio. It's just a rabid box today (esp. on AM)

A station did that up here in the early 1970s but I think they called it "Electric Circus". There also was a concert venue on Long Island by that name, IIRC.

Why thank you. A compliment from you certainly means a lot to me.
Considering the quality of your posts I don't expect much from you,
nor do I expect any positive contribution to the quality of
broadcasting, piracy or any other media delivery system you may be
interested or involved in.

I simply asked you what you wanted from radio and suggested that your
language said a great deal about you. You complain about dreck, yet
fill your posts with obscenities I consider dreck.

Why not answer my question instead of redirecting my redirection? I
suspect it's because you don't have an answer and it's easier to tear
down than create. Every newsgroup needs a troll. If you didn't exist
we'd have to create you.

Rich

Wrong. He's on the Talk Radio Network out of Central Point, Oregon.
The original ABC Talkradio ceased to exist many years ago.

I left the IDT/Talk America Radio Network about a week ago. Nothing on
that network qualified as "hate-rant." Barry Farber is a gentleman's
gentleman. Chuck Harder isn't hate. The weekends (which no longer
exist) were a collection of niche shows from motorcycles to antiques,
all live. We even had a Rabbi doing relationships.

>>my level of tolerance of a lot of things that don't harm people
>> is significantly higher than yours.

>Your tolerance of hate-rant bigotted mean spirited speech is harmful to

First, you give radio much too much credit for influencing society.
Even the most listened to network talk show has about a .4 rating
(percentage of the pouplation). Hardly enough to qualify as anything
more dangerous than quirky entertainment.

The only show I've been involved with that could be considered
"hate-rant" was Bob Grant. We finally removed him from the WOR
network. Otherwise a partial list of my shows follows. Pick the
hate-rant ones for me:

Tom Snyder, Sally Jesse Raphael (radio version), Dr. Joy Browne, The
Dolans (consumers), Warren Eckstein (pets), Tom Bodett, Joan Rivers,
Joey Reynolds, Arthur Frommer (travel), The Money Pit (home
improvement), Ralph Snodsmith (gardening), Phil Lempert (shopping),
Fodors (travel), Online Tonight (computers/internet), Into Tomorrow
(technology), Doug Stephan, Looking at the Law with Neil Chayet - and
a few dozen more over the years.

Please go over the list and pick out the hate in these shows.

>The vitriol on AM is sick and petty and evil - yes evil.

Pick up a copy of Talkers magazine and look at the ads for talk shows.
With the exception of Savage and Schlessinger, I see ads for all kinds
of shows that don't have a hint of hate in them. How about Cigar Dave?

Dr. Gabe Mirkin? Rhona at Night, Jim Bohannon? Duke and the Doctor?

Where's the hate?

I think you need to change the station.

What folks? Where do you get your information? Radio is doing quite
well, especially Talk Radio, so you speaking for the entire nation of
radio listeners doesn't hold water. Please understand that you speak
for one person - yourself. Most of the American public is literate and
can speak for themselves.

Your claim that the country craves good taste doesn't square with what
I see as highly rated in radio and TV. When Eminem wins best anything
I have to believe the country wants dreck. How come TV shows where
people eat worms light up the ratings?

Gaffo uses obscenities to tell us he wants a higher class of
programming. If we were to see a higher class of Gaffo we might
actually believe it.

Actually, when I went back to college some years ago, I studied psychology and sociology, the two subjects most related to radio programming. There is considerable evidence in scholarly studies that popular culture is self-generating and of and by the people; the media, whether it be contemporary electronic forms, or the theater (the first true form of mass media)* reflects the taste and interest of the people.

Did Shakespeare foist vulgar, popular stories on the people, or did the people flock to see what they had wanted all along? Was Beowulf intended as a historical document or popular entertainment? Heck, we can even put much of the Biblical storytelling and teaching by analogy and anecdote into this context: people pay attention to what they like and are interested in.

But you would have to sit through hundreds of hours of classes and lectures and dedicated a year or two to reading to understand this. It is far easier to shoot from the hip (and about as accurate).

* Some will argue that the repetitive story telling of the troubadours was a form of mass media.

I agree about the majority of priests. However, a religious
organization that protects the rotten ones and reassigns them to work
with even more children has a serious moral and ethical shortcoming.

Would you suggest that the media ignore such things? If the media
hadn't brought all this to light not a thing would have changed. Media
attention is a very powerful tool to right wrongs even though it's
usually used to scare the hell out of us with hype.

Your refering to "pop" culture. I'm refering to "Corp" culture. Back then
you had no mass-media. So what the people wanted to see/hear they got. Today
we have global media corps who can define and create that "pop" culture and
the sheople will simply follow!!

Marketing was not a power in the 16th century (thank God). Today media
defines and influences tastes.

Mic signals are really really low voltage, and a computer is an
electronically noisey place for little signals. You'd be best to plug
your mic into either an external mic preamp, or a little notepad mixer,
then plug into the LINE input of your soundcard, skipping the MIC input of
the soundcard completely. Of course you then need audio software, but you
knew that already didn't you?

Pat is a rare bird in today's radio; a clean, friendly voice who is really funny. I listened to the show, ever here in NY, thanks to a great group of fans, the PatPack, of which I am one.

Pat Alder

KOMO-AM cashiers Cashman

Thursday, September 5, 2002

SEATTLE POST-INTELLIGENCER STAFF

He's talented, funny and soon to be off the air again. Pat Cashman, jettisoned from the former KIRO-FM in 1999 only to be hired by KOMO-AM with the help of great fan support, is leaving KOMO this week to make way for a station makeover.

Friday is his last day on the air with sidekicks Lisa Foster and Gary Hoffman. Foster also is leaving the station; newsman Hoffman is staying.

KOMO, which becomes the Seattle Mariners' flagship station next season, is going all news in anticipation of becoming a bigger player in local radio.

Where's the double standard? We do quality programming AND we bother to
get a license.

> Fab. I commend you. We need more support for local radio (note: "local"
> radio is about extinct, and all the "Contributions" n the world will not
> save them as long as Telecom is around)

My station has been on the air for thirty-one years, and we're not "in
trouble". We don't need "saving".

> Good!!!!!!! Sadly for evey one guy who supports local radio and quality,
> there are 100 Clear channel suits doing the opposite. Soon there will be NO
> local radio anywhere in the US. TeleCom must be repealed.

I don't get the connection. Noncomms are not threatened by ClearChannel.
On the contrary: ClearChannel has donated material and other non-tangibles
to my station and other community/educational stations in the area.
Infinity has also been most generous. See, when you are a licensed
broadcaster, you can get corporate help. From here, we don't see wealthy
corporate broadcasters as The Devil.

> You hate "pirates" remember? (we had that "discussion" last year).

I don't hate them; I have little respect for them. There is a major gulf
between those of us who went to the next level to provide a station that
gets and maintains a license, has stability and longevity (when you have
been on the air continuously for thirty-one years, send me a post card),
and put major sweat into the technical quality and programming that we
air, and those who treat radio as something to do on a whim when it is
convenient and fun.

Ah, you bit. There is nothing there about programming. It basically says
that the license isn't good past the expiration date and that the station
is subject to the rules enacted by government. That's it. NOTHING about
what they can "say" on the air, or about "rights".

> How many times has Infinity been fined for violations of the indecency

Doesn't bother me in the slightest. Apparently it is a good revenue stream
for the government. God knows it needs it.

This is not an aphorism. It is a trick question, to which nearly any
spontaneous answer answer is incriminating.

I presented it to demonstrate that trying to show that you are less lawless
than other criminals leaves you very much hoist on your own petard.

Actually, the only change we have had in the last 400 or 500 years is a change from the dominance of the church and state to one of the dominace of private enterprise, the church and state. It did not change how popular culture of any kind originated, just the speed with which trends, fads and changes were transmitted across a specific geography.

Even the icons of media-crated culture such as The Spice Girls and American Idol would not work if they did not provide, as Shakespeare did, what the public was seeking. "You can bring a horse to water but..."

>
> Marketing was not a power in the 16th century (thank God). Today media
> defines and influences tastes.

Do tell. The system may be different, but there was very definitly an organized system and hierarchy for the dissemination of ideas and the promotion of goods. What was lacking was mass manufacturing, not mass marketing.

Taste, in any society, is defined by what are usually called today "trend setters" and one can see this group being active back into biblical times, and highly accented in the Roman and Greek societies. "Are red togas 'in' this season?"

The media, be it a TV network or a town crier or a troubadour, gets most of its clues and creative input by tapping into the trend setters.

First of all, Mac's don't have sound cards, the audio is built in. The
standard Mac microphones include a built-in preamp, which is why they use a
longer plug to get power.

A standard mike can be used if you use a self powered preamp and a standard
plug, it won't be long enough to reach the power contact.

You'd be much better off researching this in a Mac newsgroup. It depends greatly on what Mac you have. Older Macs had line-level input. Many newer Macs have no built-in input, so you'd have to get something like Griffin Technology's iMic:

http://www.griffintechnology.com/products/imic/

If your Mac has USB, I'd recommend an iMic even if your machine has audio input. The quality of the sound is much better.

But really, poke around at USENET archives and you'll learn all you need to know... (Try the link below for a good start.)

I never said there was any language restricting what one can say on the air. What I said was that broadcasters are not owners but trustees of the airwaves, and the public -- the true owner -- may revoke the privileges it grants if it feels they are being misused.

You seem to feel broadcasters have (or should have) a proprietary right in their channels. I don't think that was Congress's intent when it passed the Communications Act of 1934 and set up the FCC. Nor do I think very many Americans today feel broadcasters should have such a right.

>Did you check anyone else? And how many of those were for technical
>violations (the ones that really count)?

They are all for violations of the indecency rule. And what does Clear Channel or anyone else have to do with the price of eggs? Surely you don't mean to suggest that if everyone violates the law then it must be OK?

You know, I've come a long way on this issue since 1984, when I was working down in Salinas and Al Gore came out in favor of censoring anything whose lyrics Tipper didn't like. I thought broadcasters were far better judges of what their audiences wanted to hear than Al Gore or a bunch of right-wing prudes. I felt the indecency rule was an unconstitutional restriction of free speech and should be abolished.

What changed my mind? Well, frankly, I think things have gone too far, and I think some radio station owners have forgotten that they don't own the airwaves, that they are only granted licenses to use them "in the public interest, convenience, and necessity." The folks that are purely in it for the buck, who have no standards, whether of decency, fairness (and no, I'm not talking about the "fairness doctrine"), factual accuracy, or community service: they need to be shown the door. It's time for them to go.

Let me tell you what happened in Boston the other day. I came back to work from lunch on Tuesday to find our receptionist in a panic; she was getting deluged with calls from panicked listeners who had heard EAS tone on the air and thought a terrorist attack or some other horror was in progress. Our jock was doing production at the time

and hadn't heard it, but the originating station for the state EAS system had sent what should have been a Required Monthly Test -- it had the proper header and footer and the Attention Signal, but no announcement to the effect that it was only a test. And of course it went over our air 15 minutes later, while the jock was still in production.

This might have been an honest mistake on the part of the folks at the other station, but it wasn't the first time they've screwed up an EAS test. There was one a year or so ago where they sent the header and the test, but no footer, so not only did our listeners get their favorite music interrupted by a lot of noise; they also got two minutes of loud rock music following the test (at which point our EAS box timed out and put our music back on the air). Then there was the test they sent with 30 seconds of hum at zero V.U., and another that came over in the middle of a live symphony orchestra broadcast -- our PD went ballistic after that one; he wanted me to tear out the EAS box and throw it in the dumpster. All this adds up to irresponsibility on the part of the owners of that other station -- the same kind of irresponsibility, I think, that leads to "sex for Sam" contests. The underlying attitude is clearly "the public be damned."

Well, *this* member of the public doesn't want to take it anymore. Screw 'em. Screw 'em all.

For anyone interested, here's a reminder of upcoming DX tests; if anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Monday, October 21, 2002 - WLCR-1470, Louisville, KY - 3:00-4:00am EDT. (IRCA)
E-MAIL: heuser@iglou.com
WEB: http://www.wlcr.net

Saturday, October 26, 2002 - KNOM-780, Nome, AK - 12:00-1:00am Alaska Local time (4-5am EDT).
E-MAIL: rfn@nook.net
WEB: http://www.knom.org

Saturday, November 2, 2002 - WDFB-1170, Danville, KY - 12:00 - ??am EST. (IRCA)
E-MAIL: music@searnet.com
WEB: http://www.wdfb.com

Please remember, what's listed as being on, say, Monday *may* be what you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting
me know, and please, drop the station personnel a note, via e-mail or snail
mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

I seem to recall that there have been more recent pronouncements saying that broadcasters have a "presumption of renewal" of their licenses. Maybe it was in the 1996 Com Act.

Unless the licensee voluntarily returns the lisence, or there is a
successful competitive filing (both costly and very difficult with very
poor odds), the licensee would have no reason to assume non-renewal. I
believe that in addition to extending the term of the license, the renewal
procedure was greatly simplified.

Word of mouth is the supreme method of mass communication; it has been demonstrated that people's ability to remember in pre-electronic communication eras was enormous. Stories that taught, instructed or informed were used to transmit messages which could cover all of England, for example, in a few days.

Mass communication does not require a transmitter and a tower. It requires vocal chords. Those have existed for some time now.

Not on a whim. It takes more than "feeling".

> You seem to feel broadcasters have (or should have) a proprietary right

2762. Live & Local

Newsgroup: rec.radio.broadcasting
Date: 2002-09-07 02:53:57 UTC
From: "G.T. TYSON" <gtyson@nc.rr.com>
Message-ID: <albpo5$hd3$1@xuxa.iecc.com>
Source record: 9826

Here's another slant on the live & local thread:
What about live radio theatre? Nearly every town of any size has a Community Arts Council with some potentially good voice talent. Simply buy a block of time on a station, preferably AM, gather your best actors around a mike and tell 'em "you're on." The Big Broadcast of 2002. Radio without a net, just like they did it in the old days. Sound effects could be stored on a digital system and an organ player would be mandatory. We're going to bring that up at our next community arts council meeting.
How much would an hour of time cost on a 500-watt daytimer?
I'm sure I'll from a bunch of folks saying it can't be done, but some fellow from Minnesota is doing the same thing and doing pretty good at it. Our show would be a one-time thing but it would be live and local, and who knows, the idea might catch on.

GTT

A printing press (which has been around for centuries) is a very effective
tool for mass communication, as well.

Oh please.....Dave Dave Dave, this post is so sad it does'nt really merit a
response.

Fact is 400 yrs ago most folks were too poor for the luxury of travel and
thus catching the rumour mill. You simply don't have it in you to concede
the point.

You credibity is on the line.....I suggest you simply abmit you're
"word of mouth" theory be dropped before you embarrass yourself Dave.

Which is quite irrelevant. Your point of citing "greater minds than [yours]" was a cop out. You still haven't addressed the "anything for money" standard.

>>Rich must have a standard of decency lurking somewhere in his head.
>>However, I'm not interested in chasing it down to see just what sort
>>of depraved behavior would be allowed under that standard. I suspect
>>his tolerance of such things is far greater than mine.

>such things.

<snip>

>What I'm willing to do on my radio stations and networks is very
>different than what I'm willing to tolerate on other people's
>stations.

Allow me to clarify what turned in to a confusing discussion. Rich, I made no mention of what you program. I was referring to your reaction to a pointless, offensive speech by another broadcaster.

I got the impression that even as disgusting and inflammatory as it was, that you don't care enough to do anything. But I think that you should. True, O&A is not your program. But it does reflect on your industry. If you stand idle while your industry is tarred by such behavior it could easily be interpreted that you advocate such shock radio mediums.

>Most people in the Talk Radio side of the industry know what kind of
>programming I'll tolerate. No one of any significance in the industry
>has ever accused me of having a lack of ethics or integrity. That only
>happens in newsgroups by people who know nothing about my programming.

Again, I didn't intend any reference against what you personally put on the air. I am referring to your apparent "anything for money goes"

opinion of your fellow broadcasters.

The problem I have with the "anything for money can go on the air" philosophy, whether used in your daily activities as a program director or not, is that it lacks any form of ethical compass. I noticed that you didn't deny this position. Instead you diverted to other issues, you made a few crude jokes, and all sorts of cop out arguments.

However, you didn't deal with the core issue: The question is whether broadcasters and their regulators should allow something that could easily stir up civil unrest for no good reason, not whether the market will steer the parent company back to a more civil behavior.

I also take issue with what you posted in another message that the notion that two people exposing themselves in a cathedral hurts no-one. The Cathedral happens to be private property. The behavior could have been interpreted by many as an implied threat.

I've seen and experienced such behavior. Some years ago, at a private Jewish school, some teenagers from the neighborhood broke in and defecated in the school synagogue. Other incidents such as burning a cross on the property owned by a black family are similar. I doubt you would think that either act should be ignored even if committed by juveniles, simply because nobody got hurt. And we're not talking about cleaning up a pile of human feces or a couple pieces of burned wood. We're talking about an implied threat against a segment of our community. Why would the sex act in the cathedral be any different?

O&A's program did not specifically ask for this depraved disrespect. That's the only thing in my mind that gets them off the hook. I am disgusted that they thought it was funny enough to encourage. I am appalled that Jim Koch laughed along. I'm not even sure his apology means much to me. It will be a very long time before I, a micro-brew drinker, purchase another one of the beers his business produces. This behavior tears across the lines of any social fabric in our society.

Catholic Priest sex scandal notwithstanding, it is irrelevant to the question of O&A's behavior. The issue is the use of a widely known and unfortunately popular forum being used to advocate depraved behavior toward a community of religious people.

This is not about those who try to enforce their morality on others. This is about the free expression of religion. Lesser deeds than this have caused major civil unrest.

The point of the First Amendment is for a free and CIVIL exchange of ideas. O&A are treading on awfully thin ice here. IMHO, so are you. It doesn't matter what part of Judeo-Christian or even Islamic culture you're from: You are your brother's keeper.

the fact is that there were professional story tellers who went form town to twon relaying the news, told as anecdotes or parables. This goes back to biblical times. In fact, the bible is a product in a large part of this precise oral traditon. It is a lost art in times of books, instant gratification and half-hour sitcoms, but story telling and the relaying of messages and their broadcast via town criers is a fact.

Maybe if you studied some history you would know that during most of the history of mankind, very few books existed, yet there was widespread dissemination of ideas and events. Perhaps not in microseconds, but, by the standards of the time, very fast and very accurate.

Good question.....as usual Rich and Dave will not address the question - you waste your breath.

> not whether the market
> will steer the parent company back to a more civil behavior.

But Jake - surely you know Rich and Dave are "politicians" and will provide all answers to all questions - without answering them!!! lol.

Dave is better at it BTW. That smooth talker SOB. gotta give credit where due ;-(

> The point of the First Amendment is for a free and CIVIL exchange of
> ideas.

Not for Rich and Co.....anything goes.....push the envelope as long as $$$$$ can be made.

> O&A are treading on awfully thin ice here.

Sadly no....."our" government is bought and sold by the special interests Rich and Co. champion. ;-(.....there is no longer any "thin ice" ;-(.....I wish there was. ;-(

> IMHO, so are you.

He is - but since we (the listener) no longer have a voice, the point is mute. We have no control over "our" "democracy".....all is now controlled by big business (CC in this instance).

> It doesn't matter what part of Judeo-Christian or even Islamic culture
> you're from: You are your brother's keeper.

WOW an open minded person who does'nt hate Islamic peoples orthe religion)amazing esp. in this climate).....I commend you for an open mind.

> Jake Brodsky

David, you've encountered a brick wall. In the span of human
existence, the written word is very recent. The printed word even more
so. Our very own little pirate clearly doesn't know how important the
oral tradition has been to human history and mythology.

I was an English Literature major for most of my college years. The
most fascinating part of that discipline to me was the oral tradition
and how news was "transmitted" from place to place.

There were even "pirate" town criers who would be today's equivalent
of The National Enquirer.

Rich

You are rapidly winning the "Golden Obtuse" award. It was most common for people to gather to be read to, or to have stories told to them, or to have the latest news recited. The literacy issue, before the printing press, had to do with the availability of manuscripts and was precisely why memory was a far better tuned tool than it is today.

For example, it has been documented by observers of unwritten languages that entire verbal histories can be passed son between generations with nary a change of significance. You give too much importance to radio and TV and even the press as part of culture and, in fact, history. History is created by people, not by your TV set.

First, I have no real objection to "shock radio" when it's done responsibly. That may not seem possible to you, but I've heard great examples of that genre that actually even entertained me.

If anything, the radio station did exactly what it should have done (by FCC standards). They fired virtually everyone involved. There's nothing left for me to raise a fuss over. I know several influential people at the station. I'll call them tomorrow and yell at them. Once the laughter dies down (mine included) I'll call Mel and give him a piece of my mind. It'll be a small piece because I expect he'll hang up early in the conversation.

>However, you didn't deal with the core issue: The question is whether
>broadcasters and their regulators should allow something that could
>easily stir up civil unrest for no good reason, not whether the market
>will steer the parent company back to a more civil behavior.

The only "civil unrest" I can remember being caused by a radio station was the destruction of a library by listeners who were told there was money hidden in some of the books. Unlike many here I don't believe radio has the power to cause civil unrest. Most listeners simply don't care. When Rush Limbaugh can't motivate enough listeners to vote for George Bush Sr. I hardly think he can cause Republicans to become unruly. It's entertainment, folks!

>I also take issue with what you posted in another message that the
>notion that two people exposing themselves in a cathedral hurts
>no-one. The Cathedral happens to be private property. The behavior
>could have been interpreted by many as an implied threat.

An implied threat??? Of what. More sex? Whenever I come across people having sex I usually feel envy that I'm not involved. I never feel threatened. The weapon used doesn't shoot very far, so my safety isn't at risk. Yes. The Cathedral is private property. However, it's also one of New York's biggest tourist traps right across from Rockefeller Center. I doubt it's the first time their security people have come across this kind of behavior.

Who was physically harmed by what the couple did? I realize Republicans are very uncomfortable with the concept of sex. I also realize they've figured out a way to deal with it. Especially the politicians. It's a shame it didn't happen under Rudy Giuliani's reign. He would have held press conferences and threatened to do something serious like he did with the museum in Brooklyn that exhibited a picture of the Madonna (not the singer) with breasts made of elephant dung. There's never a dull day here in New York.

I'll happily go along with you in the claim that it was in bad taste. I see bad taste every day. Ever watch TV? New York is a physically small place with millions of people squashed into it. I'm sure a trip here will cause you to encounter things you'd never see in Idaho. At least not in public in Idaho.

I used to know a man who owned a porn store. He told me most of the really kinky stuff got shipped out to the Heartland. I used to live in Dallas. Half the city is dry. You'll never guess which half of the city bought most of the booze. If you live in the Heartland, peek into your neighbor's window. I'll bet you'll see implied threats happening there, too.

>This is not about those who try to enforce their morality on others.
>This is about the free expression of religion. Lesser deeds than this
>have caused major civil unrest.

As I recall, this happened in a relatively out of the way section of the Cathedral. If anything, it probably caused those who saw it to pray harder, either for the souls of those involved or to ask that they find someone to do something similar with. The couple was actually doing a service to the more religious folks by adding temptation they would have to resist.

The most recent civil unrest was a party the other night in Times Square to kick off football season. Several million showed up. Even New York drivers inconvenienced by closed streets were very civil. Angry but civil. I was on Fifth Avenue the other day near the besmirched Cathedral. There were a few people sitting on the steps drinking bottled water. They seemed perfectly at rest and very civil. Perhaps waiting for the next showing.

>The point of the First Amendment is for a free and CIVIL exchange of
>ideas.

What was uncivil about what happened? Incivility and bad taste are very different. This was bad taste. While I consider the event to have been in extremely bad taste I find the reaction of the blue noses to be hysterically funny. Especially in a place that represents an organization guilty of protecting those guilty of causing very real harm to children they were supposed to be counseling and protecting. The Cardinal in that very Cathedral is very high on the list of those accused of sweeping child molestation under the rug. Very hard to respect.

>O&A are treading on awfully thin ice here. IMHO, so are you.
>It doesn't matter what part of Judeo-Christian or even Islamic culture
>you're from: You are your brother's keeper.

Actually, they're treading water. They've fallen through the ice as a result of what happened. They're gone. Fear no more. Go in peace to await the next horrible radio event.

It's a shame Carrie Nation is dead. You two would have made a wonderful couple.

>patpack.org is out of date.

Excuse me!! "Massively syndicated???? Medved is syndicated by a
religious network (Salem) and probably has fewer than 100 stations,
though his web site claims 140. Not exactly "massive" by syndication
standards even if you believe the hype. I really loved the claim that
the show is in "high demand." Many of his stations are owned by Salem,
so you really can't count them in your "massive" list. When
company-owned stations are forced to carry a show you can't claim high
demand. You claim "the company forced me to take it."

Why would you expect outrage? He was replaced by O'Reilly, as I
understand, and has never been a dominant personality in syndication
to start with. When stations begin to drop O'Reilly I won't expect
outrage, either. Most listeners have real lives and just don't care
who is on the radio. At least not enough to offer any protest.

Rich

2776. Cathedral mess

Newsgroup: rec.radio.broadcasting
Date: 2002-09-08 17:20:43 UTC
From: John Politis <politisj@libertynet.org>
Message-ID: <alg0tb$pe2$1@xuxa.iecc.com>
Source record: 9838

I think most of the posters have missed the point of why the stunt was offensive to believing Catholics. Catholics believe in the real presence of Jesus in the sacrament which is kept in a tabernacle in every church. Thus, committing an offense in the presence of the sacrament is called sacrilegious, or a purposeful, public statement that the perpetrators are publicly trying to insult God. This is nonsense to those who have no belief in the sacred and deeply hurtful to those who do. No one is hurt in a physical sense, but believers are hurt in a moral sense. To me, this seems to infringe on the freedom of religion, for believers to have the right to the sacredness of their own private space, which others are free to believe is nonsense but not to physically infringe on. To compare the harm done to that of the Cardinal covering up scandal is an illogical assumption that one wrong makes another wrong ok. It's like saying one shouldn't be prosecuted for cheating on their taxes because some high government official is accused of doing something illegal. If a strange couple has sex in your living room, it is doing no real harm to anyone, but I think that most of the posters if they came home to this situation would call the police .

So why would this be a problem for the faithful? The sin would be
between the perpetrators and God. God can take care of himself, wouldn't
you think?

> This is nonsense to those
> who have no belief in the sacred and deeply hurtful to those who do. No

Other than having their moral self-righteousness tweaked, how are they
hurt? Again, they didn't participate did they?

> To compare the harm done to that of the Cardinal covering
> up scandal is an illogical assumption that one wrong makes another wrong
> ok.

That isn't why we compare the wrongs. Having one's sense of propriety
tweaked is a far cry from children having their lives seriously damaged
by sexual abuse.

> If a strange couple has sex in your living room, it is doing no
> real harm to anyone, but I think that most of the posters if they came home
> to this situation would call the police .

To report a trespass, not to report having sex in the living room. Would
someone call the police if an invited guest had sex in the living room?
Aren't all invited into the house of worship?

Its being deeply offensive doesn't propagate out of the religion however; its recourse is calling the police and indecency statutes.

Being deeply offensive is often the point, and that's a political point: ``Your religiousness is crap.'' A secular point in a political world.

Calling down the FCC is a fine example of bluenoses calculating their chances, and shamefully timid managers at WNEW, and perhaps at the FCC.

Imus's take on the O&A scandal (audio clips) by the way is at

1. Aug 16, the day afterwards
2. Sept 3, returning from vacation, 6am
3. Sept 3, 8am
4. Sept 3, 8:30 with Ron Insana

http://rhhardin4.home.mindspring.com/ona.ram

There is some Imus technique in it.

I don't recall anyone suggesting the act was sacriligious. Even the
Caltholic League. I would bet. Christ, himself wouldn't have been
offended and probably would have used his "he who is without sin cast
the first stone" approach to this whole affair. Perhaps his concern
would be that the couple was unmarried.

As I recall Christ treated Mary Magdalen with greater respect than the
moneychangers in the temple. The Cathedral is a tourist trap. They
make a great deal of money from the people who visit.

>To me, this seems to infringe on the freedom of religion, for
>believers to have the right to the sacredness of their own private space,
>which others are free to believe is nonsense but not to physically
>infringe on.

I believe freedom of religion is like freedom of speech where it's
confined to the government's power to curtail speech or to prevent the
exercise of a particular religion. I don't think it has anything to do
with what individuals might do in a "sacred" space.

>If a strange couple has sex in your living room, it is doing no
>real harm to anyone, but I think that most of the posters if they came home
>to this situation would call the police .

The Cathedral is a public place. My living room is not. If I came home
to find people having sex in my living room I'd be more concerned with
breaking and entering than them having sex. After all, if they're
having sex they're not stealing my property. It's a ridiculous analogy
but it's fun to go with you on this one.

I think most people would probably stop to pick up their video cameras
on the way to calling the police. They might even ask the police to
take their time.

I think you may have missed an important point, too. The couple wasn't
"in the tabernacle" or anywhere near the "sacrament", they were in the
foyer. How were they in the "presence of the sacrament"?

Somehow I don't think causing moral indignation is a crime.

Still, I'm glad to see O&A gone from the airwaves; I can now enjoy the
good rock music Infinity programs around here for several more hours
of the day. Now, if they'd just get rid of Stern, I could listen all
day!

Source record: 9845

The remarks made by John Higdon, Ron Hardin, and Rich Wood clearly demonstrate that they only see the sex act, not its implication. What a pile of apologist nonsense!

Using this logic, if a cross were burning on the front lawn of a black family, they'd say, "Aww shucks, it's just a couple flaming pieces of wood. Bring out some marshmallows and make some smores!" Clearly, none of these guys are willing to admit there is a subtext. None of them are willing to concede that a broadcaster has responsibilities. And I doubt they understand the role of radio and television in places such as Rwanda, Yugoslavia, or the Arab states.

Rich doesn't think radio has that power. Rich, I could not disagree more. Maybe you think your programming and that of your peers is ineffectual because you and most of your listeners don't take it seriously. And Rich, in your case, you might be right. I suspect one of your goals is not to offend too many people because that's bad for business.

But before you say that about the entire medium, ask yourself if the genocide in Rwanda would have taken place without a radio station exhorting the populace to do it. Ask yourself why it is that the Arab states are filled with people who seriously think the destruction of the World Trade Centers is a plot by the Jews --not the work of Al Qaida. And ask yourself why so many in the former Yugoslavia think that Milosovic is a martyr for the cause of his country.

You folks are juggling some very sharp knives here. I wouldn't be so casual about it if I were you.

Jake Brodsky, mailto:frussle@erols.com

> hurt? Again, they didn't participate did they?

Perhaps a more crude example:

Your mother or wife or daughter is raped but not physically harmed. YOU are not physically hurt, YOU did not participate, THEY are not physically hurt. This should most certainly cause you some mental anguish and HURT feelings. Having your "moral self righteousness" tweaked is a way to be emotionally HURT.

I'm a Methodist, not Catholic so I don't share the same feeling of "high holiness" for the church building or its contents. Even so, I treat the buildings with respect. I also respect the feelings and beliefs of others (even non-believers) and have no problem understanding why members of a faithful community would be outraged that such an action took place.

As far as broadcasting, I believe in something that might be described as old school. I dislike the nearly pornographic and foul language content of many radio shows. It's quite possible to be funny, informative and entertaining without resorting to foul language and sexual innuendos.

I was taught that there is much freedom in radio, and that with freedom comes responsibility. When I was on the air I realized the diversity of the audience. While I did not bend over backwards to be politically correct, I did try to treat the audience with respect. Maybe that's why I never made it much higher than ADI 100 as a jock and was unable to crack the top 10 markets until I turned to radio and TV news as a career.

In spite of my religious and moral beliefs, I also believe in freedom of speech and freedom of the airwaves. While I hate for impressionable children and young teens to be exposed to many of the things currently available on radio, TV, and in the movies, I also believe that in our country the presenters of this material have a right to do what they're doing. As a consumer I can easily change the dial, turn off the switch, or simply choose to not attend movies. Children, however, will listen to this junk out of curiosity. The reality is, until the market for

this type of entertainment goes away, people will have to deal with it.
But remember, those who oppose presentation of this content ALSO have a
right to protest and express their feelings if they so desire.

John Ziegler, a wannabe talker who proudly measures his past job tenure in months - sometimes weeks - has somehow landed a job. WHAS in Louisville is his latest victim. He's been there a couple of weeks now so he's about due for a mental breakdown and hasty exit but only after burning that bridge to the ground as is his M.O. This is the guy who was fired for calling blacks "niggers" on the air and then insiting the word is proper.

Nobody's paying any attention to the sex act. The point is the
moral righteousness you can bring out. Offense is fun and, often
enough, important, when the self-righteous want to enforce too.

``May the righteous indignation of God crush out the proud and the
unholy!'' - Erik Satie, who regarded the line as amusing.

John & Ken used to be offensive in a way more to my liking, getting
angry grandmothers to call in, on KABC and the old KFI; but you
take what you can get. They didn't need sex at all, just some
line about flag burning or the pledge of allegiance.

John's views on flag burning aren't particularly interesting, but
thinking of all the offended people was very fascinating. It holds
an audience of people like me, not that that's a huge demographic.
It's an anti-TV-news-position-on-public-issues audience.

It's possible that O&A's audience is young enough to be interested
in the sex too, but I'd think they'd be jaded in this age. Probably
sticking it in the face of the horrible nuns that taught them has
an appeal, a rebellion.

>And I doubt they understand the role of radio and television in places
>such as Rwanda, Yugoslavia, or the Arab states.

Give us a break!!! Sex in a foyer of a Cathedral compares in no way
with the burning of crosses by groups like the KKK. To even suggest
such a thing really destroys your credibility.

Read a recent history book. See what burning crosses represent. See
how many innocent people were killed and mutilated simply because of
the color of their skin. See the vicious hate such a thing symbolizes.
Then compare it to two jerks having sex in a tourist trap. If you
still find the two events comparable, I feel very sorry for you.

If I had any respect for you left before this post it's gone, now. I
rarely get offended in newsgroups but the suggestion that I would
minimize or justify the actions of those who burn crosses and murder
people is deeply insulting and so far off the mark that I won't pursue
further response on the matter from such a horse's behind as you.

>But before you say that about the entire medium, ask yourself if the
>genocide in Rwanda would have taken place without a radio station
>exhorting the populace to do it. Ask yourself why it is that the Arab
>states are filled with people who seriously think the destruction of
>the World Trade Centers is a plot by the Jews --not the work of Al
>Qaida. And ask yourself why so many in the former Yugoslavia think
>that Milosovic is a martyr for the cause of his country.

Radio in the US and radio in other countries is very different. In the
US we use radio for entertainment and, to a lesser extent, information
during emergencies. When Michael Savage says we should "nuke em and
ask questions later" we don't follow his suggestion. We listen to him,
make a mental comment on how stupid the remark is and go on to our
next appointment. It's schtick. Entertainment. When George Bush, SR.
appears on Rush Limbaugh (his only guest up to that time) and still
gets his butt whooped it should tell us something about how seriously
listeners take radio programming. It's entertainment. It's not going
to move large segments of the US population into action unless there's
money hidden in a book in a library. Then they'll trash the library
looking for it.

I gave an interview to Reuters on 9/11/2001. I was an eyewitness to the World Trade Center attack. Saw it all from the street. I mentioned that "Angry White Male" radio was likely to soften a bit in favor of a more tolerant lifestyle approach as people reevaluated the important things in their lives. Sean Hannity, with his brilliant, razor sharp mind (dulled by not changing the blade very often), read it as me likening Talk Show Hosts to the Taliban and dared me to call his show to defend myself. It was schtick. Nothing more. He was a bit presumptuous in assuming I was listening (I wasn't. I find him among the dullest of talk show hosts). If he had really wanted a serious interview there are enough people at WABC who have my phone number that he could easily have called to book me for an interview. I would have been happy to do it. That would have destroyed the schtick-iness of the bit. It's entertainment. Often mean spirited, but entertainment, none the less.

Countries like the ones you mention use radio for very different reasons. It's often a lifeline for them. I suggest you analyze the power of radio in the context in which it's used.

In the US we use it as entertainment and, in serious emergencies, we use the local "crisis station" for information to help us keep up with what could be lifesaving information. To think that it would be powerful enough to foment a revolution is naivete of the highest order.

Rich

I have never suggested otherwise. However, they do not have the right to
expect that their demands for draconian punishment for anyone and
everyone involved directly or indirectly in the tweaking of their
sensibilities be met.

Amateur Radio Newsline™ Report 1308 – September 6th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, September 6th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 222 to 225 MHz comes under attack once again, N Sync's Bass may not fly to the I-S-S after all and an Ohio city regulates 11 meter C-B. Find out the details exclusively on Amateur Radio Newsline report number 1308 coming your way right now.

(Billboard Cart Here)

**

THE WAR TO SAVE OUR BANDS: A NEW ATTACK ON 222 - 225 MHZ

Some are calling it Deja Vous. This as big business once again sets its eyes on grabbing a ham band and converting it into a money making machine. And once again its the old 220 MHz band. David Black, KB4KCH, is here with the details:

--

Once again, amateur radio frequencies may be under siege. Large corporations wanting to become even bigger want hams off the 222 to 225 MHz band, so they can make money. This time, the challenge comes from Data Commlink Incorporated and its twenty electrical cooperatives. Data Commlink filed comments in W T Docket 02-224.

That's an FCC proposal that began innocently enough. The proposal sought to gather comments on requests for waivers to provide band management services in the 220 to 222 MHz band. That's the piece of spectrum that used to belong to Amateur Radio but which hams say was stolen by greedy businesses over a decade ago.

But page 10 of DataComlink's filing holds comments that strike straight at amateur radio. The company says quote--the spectrum at 222 to 225 MHz that is currently held by the Amateur Radio Service is being underutilized. In the early days of 220 MHz commercial regulations, amateur Service licensees argued that their spectrum was necessary and important in order to provide communications in the event of disaster or emergency. Although we take no issue with this claim, we do not feel that the 222 to 225 MHz band has been utilized as well as Amateur Radio claimed it would by so-called no-code hams in their efforts to keep a foothold in the 220 MHz arena.

The filing then presents a direct challenge to ham radio. Without citing any evidence, Data Comlink asserts that in nearly all densely populated areas, the 222 to 225 MHz band is largely quiet. The company claims that only what it terms as handful of individuals in the Amateur Radio Service even use the

spectrum. Data Comlink then says hundreds of thousands of potential commercial users wait with no alternatives.

Data Comlink tells the FCC that--with considerable commercial interest already in the 222 to 225 MHz band because of waiver requests--it feels that the frequencies amateur radio holds would be much better utilized for commercial use. The company says existing users of the spectrum -- ham radio operators -- are so few in number that the economic impact on those affected would be minimal.

As for where the thousands of US hams who actually do use 220 to 225 would wind up, Data Comlink says nothing. Another issue is left unaddressed. If the FCC were to actually give the Data Comlink proposal any serious consideration, who would reimburse repeater owners the hundreds of thousands of dollars invested in their systems? DataComlink is silent on that one.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.
--

What credence will the FCC give the Data Comlink idea? That's hard to say. Since it comes in the context of comments on another matter the Commission could simply rule that anything dealing with 222 to 225 MHz is not germane to the issue. On the other hand, the FCC could use the Data Comlink commentary as the basis for a Notice of Inquiry aimed at reallocating the 222 to 225 MHz band to commercial use. Which way they will go will not be known for a few months at the latest. In the meantime ham radio had better keep a close eye on the situation so that nothing is covertly slipped by.

The complete Data Comlink filing is on the web at http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6513289200 (From comments filed to FCC by Data Comlink)

**

RADIO RULES: BAND SHARING REQUEST FOR 70 CM

The ARRL news reports that an amateur from Virginia has petitioned the FCC to allocate eight channels in the 70-cm band for use by visitors from Europe and the United Kingdom with Personal Mobile Radio transceivers. The recently authorized PMR 446 is similar to the US Family Radio Service. Dr. Michael Trahos, KB4PGC, a physician from Alexandria, filed the petition last January, saying it would help to promote international goodwill. The FCC has designated the petition as RM-10521. (ARRL)

**

ENFORCEMENT: HAM CHARGED WITH MISDEMEANOR IN ILLINOIS TRAGEDY

An Inverness Illinois man who authorities say misused a police radio channel has been ordered to turn over all the radio gear that he owns to local authorities. Bruce Tennant, K6PZW, has more:

--
According to a report in the Chicago Tribune Cook County Judge Joseph Urso has

ordered that William Bily turn over all his transmitting equipment to Barrington-Inverness police. This, as a condition of his release on bond while awaiting trial on misdemeanor charges.

Bily appeared August 30th in the Rolling Meadows branch of Cook County Circuit Court in connection with misdemeanor charges of resisting a peace officer and interfering with emergency communications. A longtime amateur radio enthusiast, Bily is said to have disrupted police communications Sunday August 25th by transmitting over the Barrington-Inverness police radio channel. When Officer Steven Graham came to his home, Bily allegedly resisted arrest. Authorities say that a struggle ensued and that during their tussle Officer Graham who was only 53 suffered a fatal heart attack.

Asserting the heart attack resulted from the scuffle, the Cook County medical examiner's office ruled Graham's death to a homicide. But Assistant State's Attorney Steven Rosenblum said that his office does not intend to seek more serious charges against Bily.

Bily's attorney, Frank Cece, asked that his client only be forced to hand over radio gear that could be used to transmit on the police radio band. He maintained that Bily, a Marine veteran who saw combat during the Vietnam War, has much equipment that poses no risk to police radio frequencies.

But States Attorney Rosenblum countered that this is not the first occasion police had visited Bily's house. The first time was on July 4th of 2000, also for allegedly interrupting the police frequency.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

As part of the bond agreement Judge Urso also ordered that Bily not possess any firearms and that he not contact the family of the deceased officer. A trial is set to take place on October 2nd in the Rolling Meadows courthouse.
(Adapted from information supplied by KC9RP, W9FS and others)

**

ENFORCEMENT: “RABBIT EARS” THE HAM JAMMER GETS JAIL

A CB operator from Florida with an apparent hatred of hams will spend the next year in a federal prison. Amateur Radio Newsline’s Bill Burnett, KT4SB, reports from Miami.

--
He called himself Rabbit Ears on the C-B two-way. He also harassed ham radio communications on several bands. And now, Jupiter Florida Citizens Band operator William Flippo will spend a total of 15 months in federal prison. He will also pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license.

According to the ARRL Letter, Federal District Court Judge Daniel Hurley imposed the sentence August 29th. This, following a guilty verdict on June 19th on four counts of operating a radio transmitter without a license and another four counts of deliberate and malicious interference.

According to trial testimony, Flippo primarily had targeted members of the Jupiter-Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. He has been in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing.

At the sentencing, Flippo reportedly wept. He said that he had turned over a new leaf and claimed he was sole support for his wife and two daughters. But Judge Hurley was not impressed. He told the 60 year old Flippo that he was old enough to have considered the consequences of his actions. Hurley also alleged numerous incidents of perjury in the course of Flippo's testimony during his six-and-one-half day trial.

Judge Hurley also told Flippo that wants a full financial disclosure from him. And when he does get out of jail, Flippo will spend another year on supervised probation during which he cannot own radio gear or firearms. In other words, for the next two years the law will be watching this C-B'er like a hawk.

In Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.
--

Judge Hurley ordered Flippo to immediately start serving his sentence. The former C-B operator was reportedly led into and out of the courtroom in shackles and leg irons. (ARRL, others)

RESCUE RADIO: HAMS, CB'ERS, GMRS AID AFTER TORNADO

Hams, C-B's, and just about anyone with a radio system not dependent on phone lines is pitching in to provide emergency communications in Ladysmith Wisconsin. This follows a devastating tornado on Monday, September 2nd that destroyed a major part of the town and completely knocked out the areas communications infrastructure. Twenty people were injured.

As we go to air, there is still no wireline telephone service and cellular service is spotty at best. The personal communications teams are reportedly augmenting local law enforcement and fire services in relief efforts. Wisconsin Governor Scott McCallum declared the Ladysmith a disaster area. (Published news reports, on-air reports)

**

HAM RADIO IN SPACE: RUSSIA TELLS BASS HES OUT OF ISS TRIP

A Russian space official said on Tuesday September 3rd that N Sync singer Lance Bass has been asked to leave Russia's cosmonaut training program and will not be the world's third space tourist. Sergei Gorbunov, a spokesman for the Russian Space Agency, said the decision to end negotiations with Bass was made in connection with what was termed as violations of his contract to fly on a supply mission to the orbiting outpost.

Bass began training in July at Star City, and just returned to Russia on Sunday after spending a week at NASA's Johnson Space Center in Houston with the other two crew members. There, Bass was trained in use of several station systems including the ARISS ham radio station. Now, Gorbunov said Bass, who had hoped to fly to the Space Station aboard a Russian Soyuz rocket on October 28th, would be leaving and would not be permitted to return.

Gorbunov said that in place of Bass, the Russians would likely send up a cargo container with extra equipment needed on the International Space Station. Gorbunov said the container has already been prepared and is ready to go.

But Bass’s representatives have a different story. They say that that its all a misunderstanding and that the 23 year old singer should be back in training shortly. If he does make it to orbit, Bass will become the youngest person to ever fly in space. (Published news reports)

**

RADIO LAW: LANCASTER OHIO HAS NEW CB CONTROL LAW

Lancaster Ohio now has a new City Ordinance to put teeth into local enforcement of the FCC’s Part 95 CB radio rules. The measure was passed on August 26th and is the handi-work of Lancaster City Law Director David Trimmer and a local area radio amateur named John Hilliard, W8OF. The two put the legislation together over the last several months and sent it twice to the FCC office in Farmington Hills, Michigan for review and comments.

Under the law, CB radio users who operate on what’s termed as an unlawful frequency or using excessively powerful equipment could be cited for a misdemeanor, with a maximum penalty of 180 days in jail and a $1,000 fine. Ham radio operators are exempted because the city says that they are trained, licensed, are regulated differently under federal law.

City officials estimate there are at least 250 people operating 11 meter Class D CB radios in Lancaster and not all follow FCC rules. The city's law will give prosecutors a tool to fight these abuses. The FCC believes that Lancaster is the first municipality to enact such a far-reaching ordinance to regulate CB radio within the city limits. (ARNewsline™ from information supplied by W8OF)

**

ENFORCEMENT: YUCAIPA CALIFORNIA TEST SESSION INVESTIGATION CONTINUES

The FCC audit of a W5YI-VEC Amateur Radio test session in California is continuing. The ARRL Letter reports that so far, the probe into a September 1, 2001, examination session in the city of Yucaipa has led to the suspension of seven volunteer examiners and the cancellation of five Amateur Radio licenses.

The W5YI-VEC's Larry Pollock, NB5X, said possible irregularities surfaced earlier this year in the form of an e-mail and a telephone call concerning two candidates at VE sessions in Yucaipa. Pollock said that one of the reports was that a license had been purchased in California. The other was that the individual in question could not copy code, and that if he had passed the exam, he had done so fraudulently.

After considerable investigation on his own, Pollock said he saw enough questionable data that he felt retesting was in order. That’s the remedy he proposed to FCC Special Counsel for Enforcement Riley Hollingsworth, K4ZDH. That was the action taken and also the action which lead to the five cancellations. The FCC’s Hollingsworth said the agency would continue to investigate other examinations administered by the VEs involved in the September 1, 2001, session in Yucaipa. (ARRL)

**

ENFORCEMENT: MAN MADE QRM ON 20 METERS

The Maritime nets on 14.315 MHz are reporting problems with interference. VK2UW says that the interference appears to be man made and regularly appears as both noises and CW type transmissions. The Australian Communications Agency has been notified and is monitoring. (Q-News)

**

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

A reminder. If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only this month, September, is canceled. There will be a TRW Swap Meet the last Saturday of the month in October, November and December. For more information visit http://w6trw.com on the world wide web. (TRW ARC)

**

CONVENTIONS & HAMFESTS: BOXBORO MASS GROWS

Attendance at this years Boxboro Massachusetts Hamfest seemed to be back to its normal level of about 3,000. This continues an upward spiral first noted a few weeks ago at the Huntsville Hamfest in Alabama.

According to observers, the exhibit hall was busy all day Saturday and there seemed to be an increased number of big-ticket sales. This again mirrors what happened at the shows in Huntsville and to a lesser degree in Escondido California that same weekend.

The biggest draw in the forums area was once again Bob Heil, K9EID, and his audio clinic road show. Bob had about 100 people in the room, many of whom left the session and immediately hit the dealers to buy the appropriate peripheral gear.

Boxboro is one a dwindling number of hamfests and conventions that still has an annual banquet. This years speaker was ARRL President Jim Haynie, W5JBP. Also on the program was live music from a four piece band.

How good was this years Boxboro Hamfest? Vertex-Standard's Chip Margelli, K7JA sums it up this way. He says that he couldn't leave the booth or take a break until 4:15 Saturday afternoon. And that kind of says it all. (K7JA, others)

**

WITH THE HANDI HAMS: AUDIO BULLETIN ON THE WWW

The weekly Handi Ham e-letter is now available as an audio file. Its in cyberspace on the Handi-Ham Audio page at www.handiham.org. Archived text issues are also available at the same URL. (HandiHams)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

INTERNATIONAL - SOUTH AFRICA: HAMS CONTINUE TO ASSIST AT WORLD SUMMINT

Ham radio is continuing its support effort at the U-N Sponsored World Summit on Sustainable Development. With the latest, to Johannesburg and Hans van der Gronnendal, ZS6AKV:

--

AUDIO REPORT ONLY: You can hear it at http://www.arnewsline.org

--

More on ham radio at this important world summit next week.

**
INTERNATIONAL – SOUTH AFRICA : JOHNNY NEETHLING, ZS1GB – S.K.

Still from South Africa comes the sad news that Johnny Neethling, ZS1GB, passed away on Friday 19 July. Neethling as 80 and was licensed just after World War 2. ZS1GB was well known in Radio and TV circles. He was also involved in maintaining equipment in the first the first heart transplant operation to take place in South Africa. (RSGB)

**

INTERNATIONAL - GIBRALTER: WILFRED GUERRERO, ZB2IB – S.K.

Q-News reports the unexpected death of well known Gibraltar radio amateur Wilfred Guerrero, ZB2IB. Guerrero was 55 years of age and for many years was the mainstay of amateur radio in Gibraltar. Most recently he pioneered,

virtually single-handedly, the introduction of the Foundation License in that nation. (Q-News)

**
INTERNATIONAL - AUSTRALIA: VK UHF CB TECH STANDARDS CHANGE

The technical standards for C-B gear used in Australia are changing. Q-News Graham Kemp, V-K-4-B-B, reports from down-under:

--
APCNews says the VK UHF CB equipment standard is to change. The standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. From Q-News Australia, I’m Graham Kemp, VK4BB.
--

The change affects only the Australian U-H-F Citizens Radio Service. No other bands are affected. (APC News, Q-News)

**

INTERNATIONAL – SCANDINAVIA: NEW MAJOR HAMFEST IN EU

A major new European amateur radio event will take place in Gothenburg Sweden for the first time in April next year. The Scandinavian HamVention 2003 will be a big hamfest where Scandinavian and other European radio amateurs can get together. There will be a large exhibition with amateur radio dealers from all over Europe and it is planned to offer Scandinavia's biggest flea-market yet, allowing radio amateurs to trade, buy and sell everything to do with our hobby. A traditional Scandinavian amateur radio dinner will be held and there will also be a special ladies' program. The Swedish national amateur radio organization, the SSA, will hold its annual meeting at the same time. Further details are on the Scandinavian HamVention website http://www.scandiham.com/. (GB2RS)

DX

In D-X, the Canadian licensing authority, Industry Canada, has authorized the use of special prefixes to celebrate the 125th anniversary of Japanese immigration to Canada. The special prefixes will be on the air from the 1st of September until the 31st of October.

And this for those listening across the Atlantic a lot higher in frequency. Word from the Radio Society of Great Britain that the G-B-3-N-W-K microwave beacons located in North West Kent are currently non-operational. The beacons, which usually transmit on 1296.81 and 2320.85MHz are off the air until further notice due to site problems.

**

THAT FINAL ITEM: 911 REMEMBERED

And finally this week, we pause to remember the tragedy of Tuesday September 11th 2001. Here’s Amateur Radio Newsline producer Bill Pasternak, WA6ITF.

--
I’m going to tile this as an editorial. Ill also promise to keep it short.

We have all heard these words before. “September 11th, 2001 is a day that changed all of our lives forever.”

The pictures are still there in our minds eye. The giant Boeing jets crashing into the World Trade Center. The buildings crumbling to the ground. The fire at the Pentagon. The scorched earth in Pennsylvania.

And the other scenes. The ones only known to ham radio. Those of the radio amateurs from New York, Washington and Pennsylvania who sprang immediately into action. The hams from across America who dropped everything, grabbed their H-T and traveled sometimes thousands of miles -- paying their own way -- to become the second, third and forth wave of relief operators and volunteers.

No, ham radio was not on the front page of newspapers. Hams were not the lead story on the evening news. The tragedy of 911 was the story. The job of ham radio was to be the carrier of the message so that aid and comfort could be brought to the victims of this horrific and cowardly act of terrorism.

What 911 showed is that our loose knit fraternity can come together when the need arises. That we maybe called radio amateurs, but that we are communications professionals. That ham radio is there when it is needed.

On 911, ham radio did the job its people have trained themselves to do. The hobby has since moved on. So has our nation. But neither will ever be the same.

I’m Bill Pasternak, WA6ITF
--

We pray that a tragedy like 911 never happens again.

**

WHO, 50KW clear channel station in Des Moines will be operating from a short stick for the next 6-8 weeks as technicians analyze and repair the famed WHO modified Franklin antenna.

The WHO modified Franklin is one of a kind and is the electrically tallest AM antenna in the country. It is 780 ft high.

WHO is owned and operated by Clear Channel Communications.

We plan to have pictures of the repair operation on DesMoinesBroadcasting.com.

Ray in Des Moines

Hi,I am Journalism student at the University of Western Sydney, Australia. I am researching radio's position in the future. I was wondering if anyone in this group might be able to help me out. Some questions I have:

Will radio be able to sustain itself in the digital world?

Will it prove stronger or weaker compered to other mediums like television and newspapers?

I don't think your knowledge of the Bible is as extensive as your knowledge of radio, Rich.
I am not a Biblical scholar, but it doesn't take a scholar to know your application of John 9:7 is faulty.
Jesus made that famous quote when he was facing a group of self-righteous scribes who were wanting to stone a woman for committing adultery. There is absolutely no way you can stretch that to mean that Christ wouldn't have been offended by sex in the church.

If you are really wondering what Jesus may have done if he found this couple gettin'-it-on in the church, I would suggest you try reading Mark 11:15.
This tells of when Jesus returned to Jerusalem and found that people had set-up tables in the temple, and were buying, selling and trading their wares.
He storms into the temple and overturns the tables and runs the money-changers off. He said "you have turned this house of prayer into a den of thieves" (paraphrasing). I think this would more accurately indicate what Jesus would do if he found this couple boinking in the church.
He might stand up for the couple if they were forced to appear in front of an aggressive tribunal, and chastise those calling for this couple's heads on a platter, but he would most certainly have been PO'd at them for fornicating in a holy place.

I could really care less about O&A's antics... And I believe that many are grossly over-reacting to this incident, but you have spent years on this forum calling people to task for factual errors and improper application of facts, so I just couldn't let this one stand without 'setting you straight.

By the way, I read that in recent years, "Judge not, lest ye be judged", has replaced John 3:16 as the most quoted verse in the Bible.
I don't know what this means except perhaps that people are trying to imply that Jesus was just a good-ole-boy who preached 'live and let live'.
Such is certainly not the case.

I think you generalize and oversimplify. As Rich said, radio in the US is primarily an entertainment medium. In other countries, it may be a vehicle of change, or a stooge for the government du jour.

> And I doubt they understand the role of radio and television in places
> such as Rwanda, Yugoslavia, or the Arab states.

I get the impression that you do not have much of an understanding of radio's role in this "kind" of country, either. Just so that I am not myself shooting form the hip, I ask, "have you ever worked in a radio station in a developing nation?" Unfortunately, I think I know the answer already.

In the Arab nations, with a rare exception or two, broadcasting is operated by the state for the preservation of the state and the Islamic faith. There is no room for dissent, for different points of view. For a while, Lebanon had a nice start on private and independent broadcasting, but that nation jumped into the proverbial handbasket headed for hell a few decades ago.

Similarly, Rwanda has a nice state broadcast monopoly, run by and for the government of the nation. There is no Kinyarwanda-speaking Rush Limbaugh or Ralph NAder taking to the airwaves to exhort the people to democratic action.

If I could figure out what Yugoslavia is, I could comment on that place, also. Bosnia has some independent stations, but their lifespan is best measured in moth-years. And most are busy playing Britney and Eminem.

You see, except for the very few high power stations that can penetrate borders, generally on short-wave, the local broadcasters in a nation tend to reflect the style of government there. If there is relative freedom as we know it, such as in France or Spain or Italy, stations tend to be very much like ours. They are entertainment vehicles. They play songs, and the talk shows debate infidelity and the peccadilloes of politicians.

When governments are totalitarian, there is no liberty at all. There are also no private stations, unless they are owned by cronies of the local dictator or despot. There is no "role" of these stations except to preserve the totalitarian status quo.

There is a grey area in the nations that are limited democracies. Since I know many of these well, I can comment on the "roll" of radio. That role is

to make money and keep pretty quiet in 99% of the cases. Occasionally, an idiot will come into a station and decide that he/she/it can change things by creating a "voice of the opposition."

Now that's an interesting role, isn't it. Very noble, very altruistic. Also, very stupid.

The following is a true story. Individual built a group of stations from scratch in an unstable "western democracy." In the first 8 years, he saw the government change 5 times, only twice through elections. He was used to seeing armed soldiers in his studios when the government changed or when there was a risk of "news getting out of control." He had a station taken over on one occasion by leftist Shining Path guerillas. Failing to learn from these examples, during the fifth such government, a military junta, he associated with opposition politicians to build a large news and talk station where the news was not conveniently doctored. This station had a significant role in mind, that of bringing about change in the government's actions and promoting free elections. Big role. Nice role. Jelly roll. Horsepucky.

The Generals did not see the role the same way, and they stuck a nice rifle in the face of the owner and said, "you will leave the country or we will shoot you." He left. He lost a total of 12 commercial radio licenses, most in cities of over a million population. So much for the role of radio in that kind of country.

Now, what exactly is the role of radio in "those" countries? The one none of us understand but which you apparently do?

Sincerely,
The guy who had the rifle in his face.

The trouble with cross burning is it isn't funny or clever. Available
options are stupid or intimidating, but not funny or clever.

I don't know that it's offensive unless you think you can get something
for being offended, which is sort of the attitude of the blue-noses
in the case at hand, a cheap righteousness.

What is offensive, and this is actual morality, such as rarely comes
up without the rags of moralism all over it, is treating adults as
children; in this case treating Blacks as if they had to be protected
from stunts. Everybody can see it for what it is, stupid. For
some reason the idea that Blacks don't need leaders and don't need
to be offended cannot make any headway in the popular story line.
That's truly offensive, and the correct response is some kind of
protest, be it a joke or some other thought to try to turn that
rhetoric.

So in short, taking offense at cross burning is not so simple either.

Greaseman ran into that and everybody caved. The correct response
would have been a better line back at him.

Even Greaseman caved, by the way.

2801. FCC announces restricted LPFM filing window to resolve 3rd adjacents..

Newsgroup: rec.radio.broadcasting
Date: 2002-09-10 12:02:15 UTC
From: REC Networks <rec_nospam@recnet.com>
Message-ID: <alkn07$n2d$1@xuxa.iecc.com>
Source record: 9758

FOR IMMEDIATE RELEASE - RESTRICTED LPFM MAJOR CHANGE WINDOW ANNOUNCED

The FCC has announced in a public notice that a restricted filing window will be opened for major changes between October 28 and November 1, 2002. Applications affected in this window are those that were filed prior to the Radio Broadcast Protection Act, a rider to a bill passed by Congress that would direct the FCC to impose third-adjacent channel restrictions on LPFM stations. This includes some LPFM stations in California.

The applications named in the public notice can file major amendments to change their station location and/or change frequency to resolve the third adjacent channel restrictions. In addition, applications mentioned in "Appendix A" and "Appendix B" in the second LPFM R&O will also be eligible for filing window.

To assist applicants, the FCC will modify their Channel Finder program to exclude these applications in order to assist these applicants find another channel. REC plans to include a "switch" to allow for the exclusion of these station records in our LPFM Channel Search Tool. This switch will be in place prior to the opening of the window.

REC has information specific to Southern California LPFM applications including alternate channel selections on some stations at:
http://www.recnet.com/lpfminfo/1002window.pdf

For information on Low Power FM (LPFM) Radio visit:

2802. Re: future of radio journalism

Newsgroup: rec.radio.broadcasting
Date: 2002-09-10 15:36:15 UTC
From: Paul Van House <pvanhouse@houston.rr.com>
Message-ID: <all3hf$m54$1@xuxa.iecc.com>
Source record: 9764

In article <alkmvt$n09$1@xuxa.iecc.com>, p_spelling@yahoo.com says...
> Will radio be able to sustain itself in the digital world?
In the near future (20-years) I don't see radio going away. I've heard that listenership levels are down from 25-30 years ago (can't cite a report but that's the general feel I get from reading this NG) but are still healthy enough to attract advertisers. Unless Satellite radio really takes off, radio will remain the primary source of information for people in cars. Of course many, like me, listen to the radio for a traffic report, weather report, and the news headlines before putting in a tape or CD.

> Will it prove stronger or weaker compered to other mediums like
> television and newspapers?
Television will always beat radio in terms of number of people listening/viewing. But, local and even network television is losing ground to the myriad of other entertainment and information sources available on cable TV and satellite. As far as newspapers, hundreds of U.S. newspapers have folded up or combined with other newspapers over the past 15 years. Newspapers, like radio, are a dyeing medium.

As far as radio journalism goes...
I don't know about Australia, but journalism on radio in the U.S. is nearly dead.
25-30 years ago when I started in radio almost every station had some sort of news department, even if it was just one person who did everything.
During the early to mid 80's, when many new "drop in" FM stations were established, competition for advertising dollars became tougher and news departments were dropped like hot potatoes.
From the mid-80's on, as ownership limits were "relaxed" (to put it mildly) many stations in the same market were of common ownership. Those that decided to maintain a news presence had one news department to cover all their stations. And that news department was barely staffed.
I've been out of radio for about 7-years now so I'm not sure about other markets, but this is how it is in Houston (one of the 10 biggest markets in the country). Most stations here either don't do news or have a morning show co-host choosing some items from the newspaper to read. News after 9:00am is almost nonexistent.
There is one reliable news/talk station (KTRH.) Its reporters and announcers also do news cutins on 2 other "Clear Channel owned" AM stations -- I'm not sure about the FM's. But if KTRH is carrying a ball game it's difficult, if not impossible, to get reliable information on any station in the market.
KILT-FM has a news department (I think they're owned by Infinity?)

but it's very small -- the two anchors have been around forever and there is rarely any sort of live spot news coverage.
Some stations get minimal news coverage by using Metro Traffic's news source. I'm not sure how this source works now, but in the beginning their local coverage consisted of a couple of anchors making beat calls along with poor quality stories posted from Metro offices across the country. Reporting was done by roving traffic reporters who happened upon a crime scene.
There are some glowing exceptions, but in many small markets, it's tough to find a live and/or local voice outside of morning drive.
Unless one gets lucky, one can expect to earn just a little over minimum wage for a radio journalism job in the U.S. ... that is if there is a radio journalism opening to be found!

The suggestion has been made that WNEW-FM lose its license. It's worth
about $200 million. That seems a little excessive for the offense,
since, as you say, the courts would give the copulators a small fine.
I doubt there would be any jail time for such a thing, especially
since it was a first "offense."

I thought it was the other way around, too much water softens the
"antenna" making it prone to fall over? Well actually it's the ground the
water softens, but it's the antenna that falls over.

And He most certainly have forgiven them for doing it. Since the Bible
is interpreted in hundreds of different ways, we'll never really know
for sure what Christ would have done.

My guess is that he's already PO'd at the church for allowing their
priests to boink young children. I'm prepared to believe there's a
much hotter place in Hell for the priests than for the Copulators in
the Cathedral.

>I could really care less about O&A's antics... And I believe that many are

I don't recall that Jesus ever expressed offense over matters sexual.
The sexual prudishness has been a subsequent glue-on, sort of a
pick-and-choose carry-over from the Old Testament.

> If you are really wondering what Jesus may have done if he found this couple

Jesus was short with the sins of greed and selfishness. Perhaps you can
quote a passage where he condemned sexual improprieties.

> I could really care less about O&A's antics... And I believe that many are
> grossly over-reacting to this incident, but you have spent years on this
> forum calling people to task for factual errors and improper application of

Actually, yau have failed to demonstrate from the Bible just how Jesus
would react to this very matter.

> By the way, I read that in recent years, "Judge not, lest ye be judged",
> has replaced John 3:16 as the most quoted verse in the Bible.

Unfortunately, most of what people in many churches believe would be
condemned by Jesus is not supported in scripture. Leaking back to the
Old Testament is not compelling evidence.

I wasn't referring to that. I was addressing the calls to "take away"
the station license, or imposition of a "20 million-dollar fine". Those
are the draconian punishments which I was addressing.

>>
The WHO modified Franklin is one of a kind and is the electrically tallest AM antenna in the country. It is 780 ft high.
>>

But, it's not really a Franklin.

It's only 300 degrees tall, and the two true Franklins at KFBK and the single true Franklin at KSTP are both 360 electrical degrees tall.

WHO's stick is indeed special, and it is indeed one-of-a-kind.

It is an "antifading" stick, but its horizontal field, while very good, cannot approach the 510 mV/m/kW at 1 km of a true Franklin.

Not withstranding that, I wish Clear Channel every success in resurrecting WHO's legendary stick.

FWIW, WAOI had a true Franklin, but as it wasn't 360 degrees tall (I think it was only about 240 degrees tall) the FCC classified it as a conventional sectional.

Only about 420 mV/m/kW at 1 km from WOAI's Franklin

And, its replacement, a conventional stick of about 195 degrees, can do nearly that ... a little over 400 mV/m/kW at 1 km.

What exactly is the definition of a "Franklin" antenna? There seems to be
a wide variety of opinion as to what a "Franklin" antenna actually is.

Regards,

John Byrns

Source record: 9773

Gentlemen, the argument before you was one where you seem to feel that the first amendment freedom of press is the over-riding factor here. Those who know what I post, know that I don't often disagree with that. However, in this case we have freedom of press versus freedom of religion, standards of privacy, and civility.

I tend to agree that in 20/20 hindsight, O&A didn't do much harm. However, if I had presented something like this to you *before* it actually went down, you'd have been hard pressed to predict whether it was a reasonable thing to say.

What if it wasn't a Catholic Cathedral that couple chose, but a Synagogue or a Mosque? Would you have had the same reaction? I have to wonder.

You argue that radio is not taken seriously, so this is all pointless. Clearly, someone took the radio seriously enough to get arrested having sex in a church. You argue AFTER the fact that no harm was done. I say the incident was reckless because O&A knew they were treading on thin ice and that they were merely doing this for entertainment value. That's not much of an excuse.

If instead, O&A had approved somebody dancing nude on the front steps of an orthodox synagogue, I think they'd have seen a legal hell come raining down on them. I don't think they'd have much help from the ACLU on this one, either.

I don't think this is about free speech, gentlemen. This is about the freedom of practicing one's religion privately without harassment. Freedom of Religion is also part of the Bill of Rights. We're not talking about moralizers who tell others how to live. We're talking about groups who assemble for private religious services. Encouraging the debasement of a religion practiced in that manner without a serious critical purpose embedded somehow (even humorously) would be fighting words. That's not protected speech, and I'm surprised you think otherwise.

I disagree with Ron that tweaking religious authorities is a good thing to do on general principle. It's one thing to do it to someone who maintains a public persona and who evangelizes their ideas outside their church. That's fair. However doing it to a religion operating in a private manner is a different issue. Then you're dealing with an intrusion.

In that light, it is OK for the likes of NAMBLA to make a speech on the radio to voice their manifesto. It's not okay to approve of a

specific indecent act for no other reason than to "tweak a church." I cite this because although both may cause civil unrest, one could argue a much stronger case for airing the former than the latter.

That's my opinion. Clearly you each have yours.

Rich, I've been civil to you. I've argued with substance and care. The techniques I used are quite legitimate. I've merely taken your arguments to their absurd extremes to challenge your thinking and to learn from your answers. If that's what it takes to get on your kill file then you have much thinner skin than I would have thought for someone in your profession. In response, you resorted to name calling, and immature behavior. I hope you have better judgment on radio than you have shown here.

I'll leave my argument there. I doubt that I have changed your minds nor have you changed mine; but I do believe we have all thought carefully about our values, how they apply to this incident, and at least made some effort to communicate. I think we're all better off for it. Even you, Rich.

Peace.

That has never been my argument. I have simply addressed the issue of scope in enforcing the law against those involved in the stunt.

> Those who know what I post, know that I don't often disagree with
> that. However, in this case we have freedom of press versus freedom
> of religion, standards of privacy, and civility.

These are murky areas and not well-defined in terms of enforcement. I know of no laws covering civility. The matter of privacy is most unclear. Surprising as it may seem, there is no Constitutional provision that guarantees that anyone may do anything with regard to religion, only that the government may not be the entity that restricts such practice.

> I tend to agree that in 20/20 hindsight, O&A didn't do much harm.

The flavor of the church is quite irrelevant.

Again, where WOULD be the harm?

> If instead, O&A had approved somebody dancing nude on the front steps
> of an orthodox synagogue, I think they'd have seen a legal hell come
> raining down on them. I don't think they'd have much help from the
> ACLU on this one, either.

Why? What, other than indecent exposure and possible trespass would be involved? That is hardly "legal hell".

> I don't think this is about free speech, gentlemen. This is about the
> freedom of practicing one's religion privately without harassment.
> Freedom of Religion is also part of the Bill of Rights.

"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof..." That's it. Nothing about protection from harassment by others. Nothing about being guaranteed "privacy".

> We're not
> talking about moralizers who tell others how to live.

Why not? As far as they are concerned, they are practicing their religion when they do this. Are they not entitled to do so "without harassment"? Why the distinction?

> We're talking
> about groups who assemble for private religious services. Encouraging
> the debasement of a religion practiced in that manner without a
> serious critical purpose embedded somehow (even humorously) would be
> fighting words. That's not protected speech, and I'm surprised you
> think otherwise.

I don't know where you get this. Other than being a violation of decorum, taste, and dignity, I don't see why you feel that O&A's stunt transgressed some sort of legal sanctum sanctorum.

> I disagree with Ron that tweaking religious authorities is a good
> thing to do on general principle. It's one thing to do it to someone
> who maintains a public persona and who evangelizes their ideas outside

If St. Patrick's Cathedral is such a "private place", why was the door not locked? It is my understanding that the doors of Catholic churches are never locked. If they want so much privacy, perhaps that practice should be reviewed.

> That's my opinion. Clearly you each have yours.

Yes, that is true. I have simply asked some questions your opinion raised for me.

> I'll leave my argument there.

Could you at least answer my questions about this nebulous set of unwritten law by which you expect others to abide? It would really help me, and maybe others, to understand your your argument.

Hi,

I am new to the radio broadcast arena would like to air our show on an FM station in the San Francisco Bay Area. This is a pre-recorded show and I would like to purchase air time to broadcast this on a daily basis. Any help in leads to securing air time would be highly appreciated. I would also appreciate information on the price ranges of air time (low to high).

Thanks!
Manu

>to wonder.

I believe the reaction would have been the same. It just happens that the most visible church in New York is the Cathedral, primarily because of its size, location and political involvement in the operation of the city. Under other Cardinals it has brought attention to itself by attempting to influence lawmaking in the city.

>You argue that radio is not taken seriously, so this is all pointless.
>Clearly, someone took the radio seriously enough to get arrested
>having sex in a church.

I think our concept of "seriously" is very different. Three people participated in a contest that offended many but harmed no one. If radio had the power you feel it has the Cathedral would have looked like a nudist colony with a full blown orgy in progress.

>If instead, O&A had approved somebody dancing nude on the front steps
>of an orthodox synagogue, I think they'd have seen a legal hell come
>raining down on them.

If your point is that Catholics get a raw deal I think you're off base. There have actually been nude people in front of and inside the Cathedral. They were arrested and carted away. The exact same thing that would have happened in a synagogue or mosque. The Catholic church isn't being singled out, except for the recent rash of child molestors protected by those in charge. That's what's causing the attention and the response that the church is hypocritical in what it chooses to find offensive.

If it makes you feel any better there have been Rabbis over the years who have done similar things. In fact one has just been convicted of killing his wife. Another was hauled off a plane for fondling a woman during a flight. Nobody's perfect.

>I don't think this is about free speech, gentlemen. This is about the
>freedom of practicing one's religion privately without harassment.
>Freedom of Religion is also part of the Bill of Rights.

If you want to practice your religion privately, don't do it in one of the city's biggest tourist traps. I would find it very difficult to worship privately in the Cathedral, except during a Mass. At other times I'd be distracted by all the tourists.

Freedom of Religion doesn't mean you're guaranteed a place to worship where there won't be naked people breaking your train of thought. Freedom of Religion means the government won't stop you from worshiping or sponsor your particular type of worship. There are , actually, nudist churches that would find it offensive if textile wearers invaded their space.

>We're not talking about moralizers who tell others how to live. We're talking

The nature of a church is that it's not private. It's public worship. Private worship is when you do it alone. A kid's prayers before bed are private.

In fact, we are talking about moralizers who tell others how to live. The Cathedral's management actively engaged in abortion issues on a governmental level and did the same in the case of gay rights issues. It has long been the target of protests of all kinds. Hardly private.

>In that light, it is OK for the likes of NAMBLA to make a speech on

What "civil unrest" has this event caused? Even NAMBLA hasn't caused "civil unrest." It's caused lots of fear and disgust but no "civil unrest." I know many people within the church who feel it needs a major tweaking on religious issues, let alone the current oproar over child molestation. In parochial school I had to study church history. There have been many times in the history of the church that required major tweaking. I was taught that kind of tweaking made the church stronger by getting rid of bad Popes, gobs of greed and the killing of people in religious wars.

>Rich, I've been civil to you. I've argued with substance and care.
>The techniques I used are quite legitimate. I've merely taken your

You're not in my kill file. You're also not in my respect file. I think calling you a horse's behind was entirely appropriate. You didn't like it, so it became immature. It's a hackneyed debating technique. Before your comment about the KKK I would have expected better from you.

I'll put my broadcast judgement up against anyone's and come out smelling like a rose. I doubt there's anyone who can argue that point and win.

There's a vast difference between what my personal opinions may be and what I'll allow on any radio station I'm responsible for. I don't program for me. I program for my listeners. I program with respect for my listeners. If Opie and Anthony worked for me I would have had security usher them out of the building within minutes. My issue is with the knee-jerk reactions to the event and the suggestion that it harmed people more than the actions of pedophile priests and their protectors. The kids were the ones really hurt, not the easily offended bluenoses looking for publicity.

Rich

What exactly is the definition of a "Franklin" antenna? There seems to be a
wide variety of opinion as to what a "Franklin" antenna actually is.
>>

Base insulated,

Sectionalized,

Bottom section and Top section of equal height,

Fed at the sectionalizing insulator through an adjustable matching network,

Bottom of bottom section connected to the ground plane through an adjustable
capacitor.

Of the sticks meeting these chaacteristics, the only ones I am aware of are:

1) KFBK's two sticks, used in DA-2 configuration,

2) KSTP's single stick, used in ND-D configuration, and

3) WOAI's old stick, used in ND-U configuration.

The Commission didn't consider WOAI's old stick to be a Franklin as the two
sections were not both 180 degrees.

The Commission doesn't consider KSTP's day stick to be a Franklin as the two
sections are not both 180 degrees, they are a fraction above 179 degrees, but
below 180 degrees, however. The performance is, however, consistent with that
of a Franklin: 510 mV/m/kW at 1 km.

The Commission considers both of KFPK's sticks to be Franklins as the two
sections are both 180 degrees. The performance is consistent with that of a
Franklin: about 510 mV/m/kW at 1 km (at least for the DA-D operation).

Peter.

John,

You seem to know that sex in a public place, and defiling a church is not a crime in the State of New York. Some authorities, including the NYPD, felt otherwise.

I propose you offer your legal services to WNEW(FM) in the ongoing FCC inquiry. Or the three that were arrested in the stunt.

They need good lawyers and good arguments.

I'm not Catholic but I found the crime offensive enough for the FCC to
take action.

Yes, IMHO if it happened in a synagogue or mosque (wasn't there a similar
DJ stunt in Denver where the DJs ran through a mosque with a drum and
bugle, around two-three years ago???) I would be offended no less.

> I don't think this is about free speech, gentlemen. This is about the

You can argue that this Catholic church's behavior is hypocritical and
I would even find grounds to agree with you. However, they don't
deserve to have others encourage depraved behavior toward them.
Nobody's house of worship deserves such pointless insults,
particularly because it can be so inflammatory.

>Freedom of Religion doesn't mean you're guaranteed a place to worship
>where there won't be naked people breaking your train of thought.
>Freedom of Religion means the government won't stop you from

Freedom of Religion means the freedom to conduct religious services on
private property. The size of the church, the attractiveness of the
church, or the scandals going on around that church are not the issue
here. What is at stake is not just the depraved act of a couple of
stupid people. We're talking about encouraging this act against the
church for no other reason than to be offensive for the purpose of
"entertainment".

And I want to put another point in this argument to rest: It's not
about the nudity. Many churches have nude cherubs painted on their
ceilings. It's called art. The issue here is the act of depravity
toward a church and the rantings of someone with a very widely
monitored forum encouraging such behavior.

>The nature of a church is that it's not private. It's public worship.

Rich, don't mistake people's tolerance for disrespectful behavior as
meaning such things are OK. If one offends another in the name of
free speech, at least let there be a purpose. If you wish to argue
that it needs no purpose beyond entertainment, don't be surprised when
some Shock Radio producer gets sued for damages, pain, and suffering
--and loses.

However, I agree this is a matter of opinion.

>>Rich, I've been civil to you. I've argued with substance and care.

Until you stopped reading what I wrote carefully enough to realize
that's not the case, I had much more respect for you too. Why do you
hold others to higher standards than you practice? Let's drop this
secondary behavior issue and simply agree to converse in a more civil
and careful manner.

>I'll put my broadcast judgement up against anyone's and come out
>smelling like a rose. I doubt there's anyone who can argue that point
>and win.

Even those who make deodorants and perfume can lay a fart. On the
whole I tend to respect your experience and judgment. I wouldn't have
made the effort to engage you in this discussion if I didn't. That's
doesn't mean I'm going to agree with you or that I won't question your
conclusions.

After all, that's free speech.

>available on cable TV and satellite. As far as newspapers, hundreds of
>U.S. newspapers have folded up or combined with other newspapers over
>the past 15 years. Newspapers, like radio, are a dyeing medium.

As a newspaper writer until a few weeks ago, I can attest to the death of newspapers. Small-town newspapers, such as the one I worked at, will be the first to go because they can not afford to keep up technologically. My paper still used Apples made in the late 80's-early 90's. No digital cameras. No "pagination" program (the ability to print out the entire page on one giant sheet of paper instead of printing each story individually and laying it out --- "cut and paste" --- which would have saved me a couple of hours each day).

These newspapers can't generate the dollars needed to upgrade. They will either have to take on debt to upgrade or they will continue to use obsolete equipment and sink to the depths. My lack of experience with current technology has been a hinderance in finding another journalism job. I guess owners think I'm too stupid to learn the new ways quickly (what is it they think I would *like* to do --- keep working with hammers and chisels on stone tablets?

Small papers also can't attract good writers because they can't afford to pay them. I've been monitoring my replacement's stories. It's not that he's not a good sports writer --- he's not a good writer, period. I've never seen so many incomplete sentences in a newspaper anywhere.

Me, I'd love to work in radio. It was my dream job in high school. But my first job was a nightmare because it was at a station in a chain run by an

egomanic who's good friend was GM. Since then, I've found that the journalism jobs are in small markets that are community minded (Nevada, MO, has about a dozen newscasts a day). In bigger markets, news isn't as important unless it's at an AM talk station. And in that case, that station will probably use the bird to fill time with Dr. Laura and Rush.

So where do I go in today's market? I don't know. It appears I am obsolete. And I was so the moment I graduated from college in 1994. One of my best friends in college went to a small station and won a state award for news reporting. He's now a DJ on an FM station because the news department was axed and he wanted to stay in the market (family concerns).

So who needs a sports/news guy? Plenty of people, I guess, as long as there are small-town stations that broadcast the local high school's football games. But you're probably also going to need to work another job.

Funny, I went to college to learn a skill that would allow me to work in an industry I fell in love with when I was 12 and live somewhat comfortably. I didn't want fame and riches, I just wanted to do what I wanted to do. But now, I'm a part of a group of workers that are considered to be "a dime a dozen", sitting in front of my computer on a Wednesday morning wondering what the hell I'm going to do.

I couldn't even get a job at the local station here. The owner has a great arrangement: his DJs read the news and he has a math teacher and an anesthesiologist working the ball games for $25 bucks a night (the games have 65 sponsors). Why does he need me for $16K a year, no matter how good I am?

Interesting. I tried to listen on the internet and the popup
window says "Playing" but there's no audio. Perhaps my problem is the
Rush Blackout? I have a friend that works at WHIO TV in Dayton -- he
probably would have told me if there were problems. In fact, up until a
few months ago the WHIO-am antenna farm was in his backyard!
I'll ask and see if there are any problems.

I guess I've decided it's time to chime in on this whole little fiasco.

My thoughts:

** Freedom of speech exists. "Congress shall make no law," etc. But
what people frequently forget is that Constitutional rights have
limits. The classic example cited by lots of people is yelling "Fire!"
in a crowded theater, which is not allowed.

** The issue: you are guaranteed the rights contained within the
Constitution, AS LONG AS you aren't infringing on someone else's rights.

** The question: Who was harmed here? Whose rights were violated?

Longtime Des Moines, Iowa and Las Vegas radio and TV personality Walt Reno passed away the evening of September 10th in Las Vegas due to complications from cancer surgery. He was 75.

Walt was a very talented individual and had retired from broadcasting a number of years ago. He recently was writing articles for a couple Golfing magazines.

>>
Is/was not KELO 1320 in Sioux Falls a Franklin? They used to run ads in
Broadcasting to that end (1960 era).
>>

Perhaps at one time, but since 1998 they're been using four 106 degree towers, nights (one tower, days).

WKY has previously been stated to be employing a Franklin, but a check of the license data shows that the purported Franklin is an ordinary sectional, with a 145.30 degree bottom section with 15.66 degrees of top loading for a total bottom section electrical height of 160.96 degrees, and an overall electrical height (both sections) of 323.70 degrees.

Now, that certainly meets one of the several assumptions of a Franklin, namely two (nearly) identical sections.

However, WKY's efficiency of 476.37 mV/m/kW at 1 km would indicate that it is not a Franklin, nor does its Sect code, which is 2.

A Franklin's Sect code is 3, and a Franklin's efficiency is about 510 mV/m/kW at 1 km.

It's true there's little or no money in small-market radio. A lot of
small-market radio has always been staffed as you describe, and the
financial pressures on these stations increased exponentially after
the Docket 80-90 fiasco. When I was working at that level, long
before 80-90, the jocks commonly doubled as newspeople, even going out
and hustling stories on the street. When the big stories hit, the
owner and the receptionist turned into reporters. I was once a
combination PD/News Director/morning jock. My crosstown competitor
was the Owner/News Director/Sports Director/morning jock! You do
what you have to do. The big bucks just ain't there. Those
fully-sponsored ball games may be bringing in 75% of the station's
total revenue. I've certainly "been there and done that."

However, in my top 100 market, hiring help has become extremely
difficult. And I pay considerably more than $16k plus full benefits
and a company vehicle. My last opening, more than a year ago, took
three months to fill because of a dearth of qualified applicants.
That makes it difficult for me to sympathize with people who say they
can't find work in the industry even though they claim to be fully
qualified.

Right now, radio news is thriving on public radio (which for our Australian friend is in the U.S. a cross between the ABC and not-for-profit community stations, one notable difference being advertising--Oz community stations can air it if they wish, U.S. public radio technically can't, so it disguises it as "program underwriting"). The daily NPR morning and afternoon news programs are consistently the most popular on public radio stations. And in most major markets and on state public radio networks, there is more of a drive to make the local news departments comparable to NPR in coverage and style. You probably won't make a lot of money--and there's a general seeming disinterest in investigative and enterprise reporting in favor of analysis, documentarianism and quirky features--but if you want to practice real journalism in radio, it's the place to be.

Warning: If you're a hardcore leftist, you'll probably quit in disgust and go work for a community/Pacifica station where you'll get paid even less (or not at all), but get little or no interference and a congenial atmosphere. If you're a hardcore rightist--oh, hell, you wouldn't even take the job to begin with if you were offered a commercial radio talk show--one of the reasons openly conservative reporters are few and far between is that most rightists coming out of school would rather be George Will or Ann Coulter than work the police beat on the overnight shift.

Doug McDonald mcdonald@scs.uiuc.edu asked ...

>>
How can you have something "mV/m/kW" ?

Would not mV/m scale as the square root of kW?
>>

Millivolts/meter/kilowatt is the standard way of indicating the efficiency of a stick. And, all ND stations are cited that way, regardless of Class.

Everything is "normalized" to 1 kilowatt input, for this purpose.

To get the theoretical field at 1 km, mutiply the theoretical efficiency by the square root of the power input in kilowatts.

(50 ^ 0.5) * 362.10 = 2560 mV/m at 1 km, for a minimally "conforming" Class A stick with an efficiency of 362.10 mV/m/kW at 1 km, and 50,000 watts input.

Make any sense?

They didn't =(And I even have a friend in Wichita working for them.

>Seriously, if you can right well, then I can't imagine why a editor would

Ahem, "write" well (Sorry, force of habit).

>care what equipment you can operate, except some sort of word processing
>equipment. I know guys that still use typewriters!

The stupid thing is, they do. I see the openings and they require knowledge of programs the Tribune would never have. I go to the interview and they seem shocked that I don't havemuch knowledge of them. Then again, at sports editors conventions, they were *stunned* that a paper with a circulation of 4,000 published *daily*.

There are four or five daily papers that size in southeast Kansas and maybe a dozen dailes that small (Our regional AP office man told us Kansas is unique in that regard --- so many tiny dailies). Two years ago, we almost openly laughed when a lecturer said, "If you work at a small paper, say something around 20,000." The *largest* paper in our group was 6,000.

>You should try to get a
>job on a newspaper in towns of 100k to250k people. Most of these papers
>still have local sports writers. And are always looking for somebody cheap!

I've tried Hutchinson, KS, which is about 60,000 (pop) but it didn't work out. I have a hard time believing that I couldn't work for a larger paper because I could *concentrate on writing* instead of having to write, edit, layout, develop film and process photos. I typiucally worked 60-65-hour weeks during the school year (and after 6 1/2 years of that, all by myself, I burned out this summer).

>Then again I work for an FM music station in a medium market that has 2

What is wrong with the Franklin array? Do you know how it is set up? 1/4 over
5/8 wl or what?
>>

WHO's stick is a one-of-a-kind, more particularly described as:

Sect = 7
A = 120.00
B = 300.00
C = 1.00
D = 1.00

The Sect 7 indicates that it is a "WHO Type" stick to the Commission's vertical
field calculation algorithm. A normal sectional is Sect 2.

A = 120 means the bottom section is 120 degrees high.

B = 300 means the overall height is 300 degrees.

C = D = 1.00 are apparently used so that the Commission's algorithm won't
blow-up with a divide-by-zero exception.

So, WHO's stick is 1/2-wave (180 degrees) over 1/3-wave (120 degrees).

In a Franklin, the top and bottom sections are equal, and in order to qualify
as a true Franklin (Sect 3), both are equal to 180 degrees.

In most sectionals, the sections are equal in height or the bottom section is
taller than the top section.

Sorry, it's in sunny Bakersfield, California. One thing that hasn't
changed about this business is that you have to be willing to
relocate.

Walt had already moved to Las Vegas by the time I got the central Iowa in the 70s, but I did get a chance to hear him a couple of years ago... he was hosting a golf talk show on KLAV-1230 in Las Vegas. Even though I don't care about golf, Walt made the program interesting.

And there's a great excerpt from Walt's days at Top 40 KSO Des Moines on Ray's website: www.desmoinesbroadcasting.com

I suspect you won't be able to be in Kansas, anymore, Toto. You're
going to have to broaden your scope beyond a two state radius.

What I don't get is press sources repeatedly mentioning this, yet I recall Clear Channel issuing a statement that they did no such thing and left discretion up to individual Program Directors. If this is true, why doesn't CC obstruct the opposite from being reported?

According to http://www.snopes.com/rumors/radio.htm, this was never an
official list handed
down on high from Clear Channel headquarters. It was more or less, a few
program directors
asking about certain songs, and the list snowballed....

Other than some in-company joke lists, there was no such list circulated
from corporate. What got me was that no one seemed to notice that CC
stations in the area were, during the time of the flap, playing many of
the songs on the alleged list.

People believe what they want to believe. Facts are irrelevant.

How could CC or any other company obstruct ANYTHING from being
reported on outlets other than those it owns?

Last time I checked, we still have a free enterprise system and
freedom of the press. People can report whatever they want, without
prior restraint, under the U.S. Constitution, although that freedom
has been compromised by the Digital Millenium Copyright Act as regards
certain software issues. But in the case of false news stories,
remedies for libel or slander come after publication, not before. And
even then, there must be some showing that harm was done.

The only semblance of real journalism on radio in the U.S. is the Pacifica network and maybe National Public Radio. Otherwise, journalism on radio is dead now, and will stay dead in the future. Commercial stations just do not see it as a money maker.

Hi--

I'm an avid AM DX-ER from the 60s & 70s, the days when you could hear coast to coast AM DX in the US.
Now that the AM band has been totally filled up by corporate radio, those days are gone.
I am wondering, can Europeans or Pan-pacific DX-ers still receive any USA-AM DX?

In the 60s, I was able to receive east coast & west coast USA-AM DX in the Chicago (mid-USA) area.
In 1977 when I travelled to the UK, I was able to DX, WCBS-AM, NYC, & WLS-AM, Chicago in London.
Is this still possible? Can any of you European DXers & Pacific DXers still receive any US-AM DX?

Why do people still think there are alligators in the sewers of NY, or that Proctor and Gamble is a satanist company?

Some people think what they want to believe, unobstructed by truth. The "Oh, the horrible short playlist of homogenized songs" people would not let this subject die. Clear Channel makes not national music decisions at all.

This never was Clear Channel policy. One PD circulated a list of songs that individual stations might want to be careful of, particularly insofar as DJ comments were concerned. But that was just a "what if?" list exchanged among programmers. It was not an order. Ever.

Hardly.
Almost all channels are blocked by high power stations.
On almost any channel you find a 300 or more kW station.

The most remote station on AM I have heard in Holland Europe is Saoudi
Arabia on 1521 with 2 MW!!.

2857. New Law Allowing Religious Broadcasters To Push Out NPR and College Radio

Newsgroup: rec.radio.broadcasting
Date: 2002-09-15 18:15:37 UTC
From: skeptix@efn.org
Message-ID: <am2io9god1@News.Dal.Ca>
Source record: 9619
Cross-posted to: bit.listserv.skeptic,rec.radio.broadcasting

The New York Times reports [1] that:

"Here in Lake Charles, American Family Radio has silenced what its boss detests...
It knocked two NPR affiliate stations off the local airwaves last year, transforming this... community of
95,000 people into the most populous place in the country where "All Things Considered" cannot be
heard.

"In place of that program and "Morning Edition," [and] "Car Talk", listeners now find "Home School
Heartbeat," "The Phyllis Schlafly Report" and the conservative evangelical musings of Mr. Wildmon,
whose network broadcasts from Tupelo, Miss....

"The Christian stations routed NPR.... under a federal law that allows noncommercial broadcasters
with licenses for full-power stations to push out those with weaker signals...

"This is happening all over the country. The losers are so-called translator stations, low-budget
operations that retransmit the signals of bigger, distant stations. The Federal Communications
Commission considers them squatters on the far left side of the FM dial, and anyone who is granted a
full-power license can legally run them out of town.

"Religious broadcasters have done this to public radio stations in Oregon and Indiana, too, and
many large-market public radio stations, like WBEZ in Chicago, complain that new noncommercial
stations, most of them religious, are stepping on the signal at the edge of their transmission areas....
"Stations are scrambling for these frequencies at a time of rapid growth in
the national NPR audience
and even faster growth in religious networks like American Family Radio. It
owns 194 stations, has 18
affiliates and has applications for hundreds more pending with the F.C.C.

"Public radio is belatedly fighting back. Last year, a national nonprofit organization was set up...
Called Public Radio Capital, it raises money through tax-exempt bonds to help local public stations...
buy full-power stations... helped public radio stations in Chicago, Denver, Nashville and Tacoma, Wash.,
to outbid their competition...

"In Tacoma, the organization bought a noncommercial FM station from a local
technical college for
$5 million.... Money to operate the station will come from major public stations in the area. "Until recently, public radio had been completely dependent on local initiative to protect its signal and
acquire new stations," said Marc Hand... managing director of Public Radio Capital... based in Denver.

"For many of NPR's 273 member organizations, the legal and administrative costs of competing against
religious broadcasters are sponging up millions of dollars that they might otherwise spend on news and
other local programming.

"It is... nuts," said Torey Malatia, general manager of WBEZ, which has the
country's third-largest
public-radio audience. "Starting about four years ago we realized that if we didn't learn how to fight
back, our coverage area would effectively shrink by a million people."

"As NPR itself acknowledges, religious broadcasters... "have employed a long-term strategy, where
we have failed to do that"...

"The two public radio stations heard in Lake Charles... were caught napping
as American Family Radio
maneuvered over several years to bump them off the air...

"Translator-based stations have given American Family Radio the opening it needs to grab space
on the noncommercial FM dial between 88.1 and 91.9 megahertz...

"As early as 1997, the network filed applications with the F.C.C.... to build two full-powered stations
that would step on the two... public radio signals in Lake Charles...

"Religious broadcasters are snapping up most noncommercial stations when they come on the
market. In the first two quarters of 2002, there were 14 sales of noncommercial stations. Of those,
public radio groups bought only two...

"Here in Lake Charles, local rage at the loss of all access to NPR has fueled a yearlong effort to
bring back public radio....

"What Wildmon has done to the public broadcasting band is try to eat it all," said Robert W. McGill, 74,
an NPR devotee and a retired chemist. .. Wildmon, who became well known in the 1970's when he
led national campaigns against sex and violence on television, declined to be interviewed...
.."Like many religious networks, American Family Radio has little local content; its stations rely
instead on satellite feeds from the home office in Tupelo. Radio industry analysts agree that public
stations usually carry more local news and offer programs more closely tied to the communities
they serve...

"More than a year after American Family Radio went on the air here, its two
stations (one carries what it
calls Christian contemporary programming, the other what it calls traditional gospel) have just one local
employee.... Elizabeth Arrington, 21, the station manager, works in a remodeled house on the edge of
town. Its broadcast studio is an empty room, although Mrs. Arrington said radio equipment would arrive
soon.

"In all likelihood, before American Family Radio gets around to local broadcasts in Lake Charles, public
radio will be back on the air here....

"A $309,000 antenna, nearing completion about 30 miles west of town, will let people here pick up KRVS, the NPR affiliate in Lafayette... "We lost access to a treasure that we all pay for with our tax dollars...
We decided you don't have to like NPR in this town, but you are going to have to make room for it."
----

[1] "Religious and Public Stations Battle for Share of Radio Dial" by Blaine Harden, _New York Timnes_ online, 9-15-02,
fulltext http://www.nytimes.com/2002/09/15/national/15RADI.html
--- end quotes ---

This doesn't just affect NPR. College radio stations will also be flooded out by more powerful religious signals. College radio listeners tend to be
off-campus, either in oiutlying dorms or in nearby
communities.

The problem can't be solved with just a "full-power license". The area covered is a strong function of both effective radiated power and antenna

height. That may mean building a new transmitter facility at a more strategic (and higher-rent) location. "Effective" radiated power requires a sophisticated antenna system to focus the power at the horizon over the target area. These antennas are rather large for 3-meter wavelengths in the FM band.

Going headd to head with another station also means larger electric bills -- over $6,000 per yr. per 10kW added. All of this cost comes out of educational content, for stations barely able to subsist as it is. The problem is not just that Congress 'stepped on' public radio by passing this new law. The FCC proposed that law to Congress, because of 'new thinking' at the FCC.

Until very recently, the FCC was supposed to MINIMIZE interference between stations, by not licensing the same frequency twice in the same geographical area. Channel space has always been scarce, but the solution
was to auction channel space -- or for potential station owners to buy each other out.

The only thing that's different today is the variety of content available to educational stations, versus
the desire to hype religion from every tower -- even though the SAME religious messages are readily
available on local cable, local commercial radio stations, and local commercial TV stations. Many local
broadcasters have turned to religious audiences to replace listeners lost to cable.

The original FCC policy (of avoiding interference) was actually developed for AM radio, and for AM video signals. When AM signals interfere, even weakly, the result is a piercing howl (or in the case of TV, visible heterodyne).

Early FM signals were also vulnerable to interference. Most receivers built since the 80's, however, lock on to the stronger FM signal and ignore
the weaker one, using what are called phase-locked loops. This same principle applies to narrow-band FM signals used by most police and fire depts. -- the stronger signal dominates completely . That's especially true in the UHF bands, since UHF follows line-of-sight, and doesn't cause problems over the horizon.

There are several reasons NOT to allow competing signals on the 'regular' FM band. Unlike the UHF bands, FM signals travel over the horizon somewhat, and are more subject to atrmospheric reflection, causing problems
farther away. When stations compete, uneven coverage is exacerbated -- whether caused by uneven terrain or by intervening objects. A listener may hear 'the wrong station' as planes fly over or as trucks pass by.

The FCC and Congress aren't worried about what that will do to lower-power NPR and college-radio stations -- the tacit assumption being that public radio will be forced off the air, and cease to be a political problem. It's also a case of "wattage talks, content walks."

Until fairly recently, the FCC could also weigh "operation in the public interest", i.e. how much a proposed licensee (or classs of licensee) could contribute to the public good, through variety of educational content, or pursuant to informed democracy. College stations, obviously, could contribute a great deal educationally. Another rationale was also that academic speech couldn't be excluded from the dial merely to favor commercial-speech brokers able to bankroll a higher wattage.

The FCC has long sought a way to avoid value-judgments on whether diverse educational programming is 'valuable enough' for a protected place on the dial, compared to, say, a plethora of carbon-copy religious stations.

The FCC's role is fast-changing, because the real future is seen in new technologies. Cell phones for example 'channel hop' as needed. Packet-switched radio networks accomodate several users on the same frequency. Spread-spectrum devices of competing brands can all share the SAME bandwidth, spreading their individual signals across many channels. (While traditional superheterodyne radios modulated a simple sine wave, this is not technically necessary. The carrier wave can be anything -- including a broad-band signal that sounds like faint noise without a matching demodulation.) The FCC is now happily licensing spread-spectrum devices such as personal radios -- with the caveat that the user and manufacturer agree to "accept any interference" caused by other devices. If several people in the same building use spread-spectrum devices, the better devices are smart enough to route around each other's signal.

At first glance, spread-spectrum SEEMS like a magical eventual cure for crowded airwaves, but it's not.
Finite bandwidth is still finite. While some spread-spectrum LANs are blazingly fast for example, performance decays and range decreases as the bands become crowded, and the background noise increases, making it hard for such devices to receive each other accurately. T

The FCC has also been talking up "Internet appliance" -- including wireless 'radios' supporting delivery-on-demand of music, video, gamies and whatnot. These supposedly will replace both radios and PCs, and have the commercially desirable feature of taking control away from the user, and giving it to the vendor -- who can then control how often a song or game is played, bill in realtime etc.

There's just one problem, and that's lack of wireless bandwidth. The tacit assumption is that bandwidth-hungry "Internet appliances" will simply make content with a fiber-optic network, via matchbox-sized cell nodes as

common
as phone outlets in today's buildings. The only problem with that rosy future is that many cable companies lied like rugs about how soon they'd wire the country for 2-way digital cable, IF municipalities would only grant exclusive franchises, which they did. Customers ended up getting one-way "broadband" cable, with the assurance that the high prices they were paying would go to
improve the network -- somewhere else where the franchise wars were hot.

So it seems that the FCC, and Congress, are throwing away the future of public radio, on the vision of new wireless technologies that are still vaporware. The message is in essence "We don't care what educational networks people have built -- we're forcing a new paradigm on everyone through the Miracle of Social Engineering", driven by the vast arrogance of
Congress.

There's also been a political shift between Congress and the FCC. The power to protect public radio was also the power to protect public morals, and the power to require equal time for opposing political viewpoints. The
Supreme Court has largely eliminated the FCC's powers of content control, while wired
networks bypassed the FCC's power over the airwaves.

The result has been a push to use purely objective criteria in granting licenses. A maximally powerful station is thus "better" at serving a wider
area, regardless of what it serves up.

There's also a growing belief among religious empire-builders that the public doesn't really NEED diverse educational offerings and liberal arts. In a post-9-11 world, the public need learn only to hate foreigners, be willing to kill foreigners, and to understand that a world war is necessary to defend Our Religion against the Great Satan The futility of World War III is irrelevant, because Jesus will come in the nick of time to exalt those with blood on their hands. If that's said often enough, on enough stations drowning out skeptical voices, people might even believe it.

Jim Kutz

The radio crazy is back!

I am now seeking investors (joint venture) to help me acquire a fulltime 1 KW in a small Idaho town not too far from the famous Jackson Hole, WY ski resort.

Total price for station is $85,000 with $25,000 down. It is the only station in the town. On the air over 30 years.

Active or inactive investors with at least $5,000 each are welcome. No investor (including me) can hold over 49 percent of the stock. We don't welcome "bullies"!

There is NO real estate included.

Negative nabobs and "AM bashers" are clearly not welcome to reply!

I am a semi-retired broadcast engineer and a ham since 1950. Last job in radio was CE for a fulltime 5KW directional AM in New York City. So I know what I am doing.

73,

Meyer Gottesman, W6GIV

I am now seeking investors (joint venture) to help me acquire a fulltime 1 KW in a small Idaho town not too far from the famous Jackson Hole, WY ski resort.

Total price for station is $85,000 with $25,000 down. It is the only station in the town. On the air over 30 years.

Active or inactive investors with at least $5,000 each are welcome. No investor (including me) can hold over 49 percent of the stock. We don't welcome "bullies"!
>>

Class B or Class C?

How close is "not too far" from Jackson Hole?

I say give them both licenses for the same frequency and no power limits at all.

The low quality of both NPR, which is long-standing, and the recent
decline in religious programming, leaves me not caring who wins.

Bring back Brother Binardi (``an 80 year old pharmacist who is in perfect
health'') and the fellow whose every sermon involved somebody who had not
repented being wiped out in an absolutely novel way, always a sad moment.

The present religious programming is no better than Rush when he loses his
sense of humor, which is to say his self-deprecation, and starts moralizing.

>What the copulators are accused of doing, and what WNEW-FM is accused of
>doing, are two entirely different things.

Wow! I hadn't realized that! The issue is whether or not the
punishment for whatever either one was doing fits the "crime."

I can't see the justification for punishing Infinity to the tune of
$200+ million for something the copulators will be able to pay out of
their next paychecks.

If the "contest" was rigged, the usual fine is about $7000. Maybe
since nudity was involved (Americans don't like nudity, let alone sex)
the fine should be doubled. We certainly don't want to face sex, let
alone naked sex. If I had been listening to the broadcast commentary
the nude "pictures" would be in my head, since radio is an aural
(maybe oral in this case). Each listener should be fined for listening
and allowing theatre of the mind to generate feelthy peectures.

The firing of virtually everyone involved will go a long way in
satisfying the FCC that the station acted responsibly in handling the
situation. The bluenoses will have their investigation and the station
will probably be fined. Politicians will make hay while the sun shines
(not very long) and the issue will go away.

The "talent" will probably be running yogurt stands in Akron, though
there's a rumor a Boston station wants them. Stay tuned.

Uh, I think greed requires more money than the contest was awarding. Greed is Enron, Worldcom, Tyco and all the companies that have, suddenly, found "errors" in their accounting. Particularly greed that harms others.

I'm sure all the investors in our 21st century corporate ethics would much rather have had their CEO's copulating in their offices rather than cooking the books. "It's a bad thing" (sorry Martha). At least they wouldn't have lost their life savings. THAT's selfish.

I say, bring back the all-time, greatest televangelist in the history of broadcasting: Rev. Roosevelt Franklin, and the "Echoes of Prophecy". When I started in this business in September 1973, my first job was to run the board for Sunday morning public-affairs programming, including Echoes of Prophecy. He never preached a word of gospel. He spent 30 minutes asking you "write me a letter" and "don't forget to include a sizable check" and "I'll send you the latest Prosperity Package", which guaranteed riches beyond belief. Half of the program was "Testimonial Time", at which time people called or wrote in to say that within days of sending the Rev. Franklin a check, they got a new car or came into riches.
It was totally hilarious.
Today I am an Evangelical Christian, so don't count me as a Christian-basher, but I agree with earlier comments that there is a special place in hell for people who use religion for personal gain or to take sexual or financial advantage of people.

The original query was about the future of journalism on radio. Regardless of what the political slant of the sources, there is real journalism there at Pacifica. That is, you get investigative reporting, on the spot reporting from unlikely places as Zimbabwe, Afghanistan, Guatemala etc., in depth stories, documentaries, commentaries. You just don't have that on the so-called all news/all talk stations. You don't get that on the 3 1/2 minute newtwork news blurbs at the top of the hour either.\

Amateur Radio Newsline™ Report 1309 – September 13th, 2002

Amateur Radio Newsline report number 1309 with a release date of Friday, September 13th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A world ham radio license inches closer while the N-T-I-A says no to 5 MHz for U-S hams. These stories are first on Amateur Radio Newsline report number 1309 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS: WORLD HAM LICENSE A BIT CLOSER

A world wide universal ham radio license is a bit closer. Q-News Graham Kemp, VK4BB, reports on a meeting that has opened yet another door:

--
AUDIO REPORT ONLY: NO TEXT AVAILABLE. Audio is at http://www.arnewsline.org
--

It had been hoped that a world license would have been in place by the turn of last century two years ago. Now pundits are suggesting the end of 2009 or maybe 2010. (Q-News)

**
AMERICA AT WAR: HAM RADIO COMMEMORATES 911

Amateur radio was at ground zero in New York, Washington and Pennsylvania a year ago. And on the first anniversary of the terror attack that felled the World Trade Center, hams were there once again as the nation paused to reflect. The day before the 911 commemorative ceremonies were held the United States was put on a heightened state of alert for terrorist activity. Color orange the government calls it. And since 911 the words to live by all around the world have been – be vigilant.

Ed Note: From the President of the ARRL addressing the hams of the world on an Internet link-up, to hams in Florida operating air-mobile carrying American Flags to hams in NYC assisting at ceremonies, the Amateur Radio community involved itself in 9-11-2002. Much of it appeared to be planned at the last minute and only now are reports coming into our newsroom. Rather than rush together a report that would not do justice to all that was done, we plan to do in-depth coverage in next weeks newscast. (ARNewsline™ from listener reports)

**

THE CHALLANGE TO OUR BANDS: ARRL EXPECTED TO FILE ON THE 222 MHZ ISSUE

The American Radio Relay League is expected to file reply comments in opposition to the initial comments of Data Commlink Incorporated. This, in FCC W T Docket 02-224.

As reported last week, W T Docket 02-224 merely sought to gather comments on requests for waivers on spectrum management services in the 220 to 222 MHz band. But Data Commlink decided to use it as an opportunity to strongly suggest that the FCC remove 222 to 225 MHz from use by radio amateurs and transfer it over to commercial service. Primarily for use by the electric power cooperatives that it represents.

Word is that the League will vigorously defend the 222 to 225 MHz spectrum. Keep an eye on the ARRL website news pages at www.arrl.org for the latest. (ARNewsline™)

**

THE SPECTRUM FIGHT: NTIA HEAVES POTENTIAL MONKEY WRENCH INTO 5-MHZ BAND PROPOSAL

The National Telecommunications and Information Administration -- the N-T-I-A -- has recommended that the FCC not grant an ARRL petition for a domestic-only secondary Amateur Radio allocation at 5 MHz. Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--
The N-T-I-A regulates radio spectrum allocated to the federal government. According to the ARRL Letter, the last-minute negative recommendation from that agency followed hundreds of largely favorable comments and reply comments from all sorts of organizations and from many individuals.

But in an August 21st letter, the N-T-I-A's Fredrick R. Wentland wrote that federal agencies are making extensive use of High Frequencies for emergency services. This, Wentland says, includes communications support for the Department of Defense, the Coast Guard and Department of Justice.

Wentland, , who is the agency’s Acting Associate Administrator for Spectrum Management went on to say that the N-T-I-A believes the Commission's current proposal does not adequately provide for protection from harmful interference to these critical government operations primary in the band. He says that without a more complete understanding of the interference potential to federal operations, the N-T-I-A believes the secondary amateur allocation would be "premature.”

But Wentland did offer up a carrot so as to speak. He said that N-T-I-A was willing to work with federal agencies, the FCC and the amateur community to determine whether some future accommodation for amateurs at 5 MHz would be possible. However that could include limitations on power or emission types, a reduction in the size of the proposed band, the use of discrete frequencies or geographical restrictions.

>From the South-East Bureau, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Wentland's letter arrived at the FCC beyond the cut-off date for reply comments for ET Docket 02-98. None-the-less, the N-T-I-A is a powerful agency and when it speaks, all other agencies tend to listen and to obey. (ARRL)

RADIOSPORTS: US TEAM RETURNS FROM ARDF CHAMPIONSHIPS

This year's team of eleven American on-foot foxhunting enthusiasts were up against more than 300 competitors from 28 other nations, and they came within two minutes of bringing home our first medal. Nadia Mayeva from Mooresville, North Carolina took fourth place in her age category by finding all her required transmitters in 109:02. She was edged out by a YL from China, who won the category bronze medal in 107:20.

Gyuri Nagi KF6YKN of Maspeth, New York placed fifth out of 50 in the hotly-contested M40 category. Tthat's males ages 40 through 49. He and his family put on a one-week training camp for members of Team USA near his native hometown in Hungary during the week before the championships.

This was USA's third trip to the World Championships, which are held in even-numbered years at locations chosen by the International Amateur Radio Union. Team members ranged in age from 33 to 60. Co-captains were Dick Arnett WB4SUV of Erlanger, Kentucky and Bob Frey WA6EZV of Cincinnati, Ohio. Karla Leach KC7BLA of Bozeman, Montana represented USA and IARU Region 2 on the International Jury overseeing the competitions. Her assignment was Course Marshal at one of the foxes.

Complete results for all ARDF Team USA members plus lots more information about the sport are now at Team USA's official Web site: www.homingin.com That's homingin -- one word -- homingin.com

>From sunny southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline. (K0OV, ARNewsline™)

HAM RADIO IN SPACE: BASS OFFICIALLY OFF OCTOBER ISS FLIGHT

It’s now official. The Russian Space Agency has notified NASA that 'N Sync singer Lance Bass, KG4UYY, won't fly to the international space station next month because his backers were unable to raise the $20 million fare.

With backing from corporate sponsors that included Radio Shack and MTV, Bass had hoped to blast off from the Bikenour Cosmodrome in Kazakhstan on October 28th. But the producer of a seven part documentary on Bass experience in space failed to raise the full amount of money needed. The result is that the pop star was grounded by the Russians and a cargo container substituted on the flight in his place.

Had he flown Bass who is age 23 would have been the youngest person and youngest ham radio operator ever in space. He also would have been the third paying space tourist to visit the I-S-S. We'll have more ham radio space related news later in this weeks newscast. (ARNewsline™ from published reports)

**

ENFORCEMENT: DONT TAKE 10 ON THE ROAD AGAIN

The FCC has told Cheetah Transportation Company to keep its trucking operation off of the 10 meter Amateur band. In a letter to the Monroesville North Carolina company the FCC says a driver for a vehicle licensed to Cheetah was operating unlicensed radio transmitting equipment on 28.085 MHz. This, while driving on Interstate 77 in South Carolina last June 5th.

In its letter to the company the FCC tells Cheetah Transportation that this operation will subject the person operating the radio to fine or imprisonment if the violation continues. Fines normally range from $7500 to $10,000. (FCC)

**

ENFORCEMENT: FCC SAYS NYC REPEATER PROBLEM IS SOLVED

The FCC says that a repeater problem in the New York City area has been put to rest. This as the agency places primary responsibility for solving interference on the shoulders of the operator of an uncoordinated repeater. The agency's Daryl Duckwoth, NNZ0W, explains:

--
Duckworth: "We closed the case involving a repeater operated by Ramon Floriman, KB2PRV, of Elmhurst New York. Florimam was unable to show coordination and the Enforcement Bureau pointed out that he would be primerilly responsible for resolving any interfertence to a coordinated repeater; that a Control Operator must be present during the operation of the station and that the repeater is to be used only by licensed operators."
--

The FCC hopes that closes the book on this one. (RAIN, FCC)

**

HAM RADIO EDUCATION: THE BIG PROJECT WORKS

The ARRL Education and Technology Initiative, better known as "The Big Project," has been getting big donations. More important, its getting big results.

The Big Project was created by ARRL President Jim Haynie, W5JBP. League Vice President Kay Cragie, WT3P, made it all work. Its primary objective is the spreading of Amateur Radio into the nation's schools.

The Big Project support fund has already received $198,000 in donations from approximately 3,400 individual ARRL members. The average donation has been about $50. (ARRL Great Lakes Div. Release)

**

HAM RADIO TRAINING: HAMTESTONLINE.COM

J. Cunningham and Associates has launched a new subscription website for aspiring radio amateurs and those wanting to upgrade. Called www.hamtestonline.com, the company says that the site is designed to help both new and experienced ham radio enthusiasts prepare for U.S. amateur radio written exams.
According to a press release, HamTestOnline operates entirely online. There is no software to download or install. One click records your answer, provides feedback, and presents the next question. The Website includes all questions from the latest Technician, General, and Amateur Extra question pools.
J. Cunningham & Assoc. is a small software development and consulting firm located on the outskirts of Boston, Massachusetts. They can be contacted by e-mail to webmaster @hamtestonline.com. (Hamtestonline)

**

BROADCAST COMMUNICATIONS TRAINING: SBE OFFERS CERTIFICATION

The Society of Broadcast Engineers – the SBE – is offering a program of certification for broadcast engineers. Certificates range from the entry-level Broadcast Technologist to the 20-plus-years-of-experience-needed Professional Broadcast Engineer. The program includes certification for Audio and Video Engineers. There is also a Broadcast Network Technologist which does not include any RF related questions. For more information about SBE Certification contact the SBE chapter nearest to you. (SBE PDX)

**

CELEBRATIONS: SCADS AT YEAR 29

The 29th Birthday Meeting of the Southern California Area D-X’ers is slated for September 21st at 12 noon. The venue is the Community Room of the F&M Bank in suburban city of Seal Beach. The meeting is open to the general public. Contact Bill Fisher by e-mail to billfishernow@netzero.net for more information on this special gathering. (SCADS)

**

SPECIAL EVENT STATIONS: GB2RAF ON THE AIR

And the permanent special event station GB2RAF located at the UK Royal Air Force Air Defense Radar Museum was to be operational on Saturday the 14th of September between 09:00 and 14:00 UTC in the 80 or 40 meter bands. QSL will be sent to all amateurs who make contact and request one. (GB2RS)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EDUCATION: HOME SCHOOLING HAD HAM RADIO

In California where Amateur Radio Newsline is located, some 150,000 youngsters each year are getting their primary education at home. They are home schoolers. Their teachers are primarily their parents and similar percentages hold for most other states. And there’s a growing question: Has ham radio become a part of the home schooling movement? Bill Pasternak, WA6ITF, has more:

--
Rumors abound that ham radio has become an important addition to the nations home schooling movement but only those involved in home schooling can really tell us -- and you -- what’s happening. To try to find out, Amateur Radio Newsline is going to run one of our “mini surveys.”

To take part is simple. First you need to be a ham radio operator who is home schooling his or her children or a ham radio kid who is being home schooled. If you fit either category, take a moment to send us a note explaining how you are using ham radio in your home schooling curriculum and why you chose it.

Please send your electronic response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We will collect the data for the next three weeks and then post some of it to our website. If we get enough input we may even try to write an article on ham radio and home schooling for one of the mainline Amateur Radio magazines -- if they are interested. Lets face it: This could make for a rather interesting project.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF
--

Again, if you are a home schooler who uses ham radio in the teaching process please send your e-mail response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We thank you for taking part in this survey.

**

HAM RADIO IN SPACE: U-O-SAT 11 HEARD AGAIN

In the world of ham radio in space, word that U-O-SAT 11's V-H-F beacon has been heard once again. Paul Roeder, KK5ET in Houston reports via the AMSAT News Service that he copied the 2 Meter downlink on 145.826 MHz FM. This is a 1200-baud A-F-S-K signal and he heard it between 21:25 and 21:38 UTC pass on September 4th. Paul says that the signal was a strong S 3 to S 5. (ANS)

**

HAM RADIO IN SPACE: JAPAN TO DEVELOP SPACE SHUTTLE

Japan's space agency says that it plans to test an unmanned landing and take-off system next month. That nations National Space Development Agency, or NASDA, that it hopes will one day be used in a reusable shuttle or other spacecraft.

The five-part tests are to begin next month on Christmas Island in the Micronesian archipelago of Kiribati. They will be followed by a second set of tests sometime next year. (K6DUE, NASDA)

**

ON THE AIR: THE VHF/UHF FALL SPRINTS

The 2002 Fall Sprints, sponsored by the Southeastern VHF Society, are about to start up. According to Greg Robinson, KB4NVD , the Sprints are a fast paced block of time where all the contest activity is compressed into a short period. That says Robinson makes them a great chance to get on and work lots of stations on your favorite VHF and higher bands.

Robinson says that the bottom four bands all have their own separate evenings for the contest. The microwave bands from 902 MHz and up are grouped together on a weekend morning.

More information about the days of the Sprints , the rules and a list of who is handling the logs for each band will be found on the SVHFS webpage. Its in cyberspace at www.svhfs.org. (VHF Reflector)

**

DX

In D-X, word that G3PYB, G8ACE and G8BKE believe they have re-claimed the United Kingdom distance record for 76 gigahertz. Yes that’s 76 gigahertz -- as in way up there in frequency.

On Sunday September 1st, the trio made contact on 75,976.2MHz over a distance of 79.6 kilometres between Ventnor on the Isle of Wight and Highclere, near Newbury in Berkshire England. Further details are on the world wide web and there's a link from the RSGB site at www.rsgb.org. (RSGB)

And nearly at the other end of the spectrum, on August 30th at 05:50 UTC stations G3MLO, and MW0AQD, were in QSO and taking part in the British 'Fivemegs Experiment' on 5398.5kHz at 05:50 UTC. Afterwards, G3MLO received a reception report from ZL2JR, saying that their signals had been copied in New Zealand. MW0AQD was received at '4 and 4' while G3MLO was copied at '5 and 4'.

While the 'Fivemegs Experiment' is intended to investigate propagation within the U-K, the contact was made shortly after sunrise in Britain and around sunset in New Zealand. This is the time that long-distance 'greyline' propagation can be expected to occur (RSGB)

**

THAT FINAL ITEM: A NEW KIND OF BATTERY

And finally this week, a new battery about to be marketed for home video enthusiasts holds a promise in expanding ham radio emergency communications. It is called Instant Power and Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more in our technology report:

--
One of the most frustrating experiences for a photographer or a ham radio operator is to be in an acute situation that requires equipment work properly and have the batteries powering the equipment go flat. For the photographer it usually means a lost photo opportunity. To the ham radio operator assigned to provide communications during an emergency it could be a life and death situation.

But power reliability could soon increase dramatically. Steve Crow, K4CPX, passes along word that the nations largest photographic retailer, Ritz Camera has announced plans to begin selling a new battery that can keep a camcorder or digital camera shooting away for half a day.

The new source of portable power is Electric Fuel Corp.’s Instant Power disposable batteries. Based upon Electric Fuel's zinc-air technology platform, the Instant Power camcorder battery connects to the camcorder through its DC jack and offers the user up to 10-hours of running time. Another model designed for digital still cameras offers upward of 12 hours of continuous operation time. As with the camcorder battery, the digital camera battery pack comes with a built-in belt clip and 3-foot cord. Both batteries have a five year shelf life in the original sealed aluminum pouch and come complete with a 3-foot cord and an integral belt clip.

While not directly designed for ham radio needs and not a renewable source, the new battery could augment the needs of ham radio operators in emergency communications situations. And here’s where Amateur Radio ingenuity comes in. If models are available that can directly or through some home built regulator adapter be made to power a 5 watt hand-held radio, an Amateur working an emergency situation would have hours of power wll beyond that of his radios normal battery. And depending on how much he transmits, an Electric Fuel battery might run his H-T for several days before requiring replacement. This also gives the possibility of extended operations for low power Field Day stations, QRP treks and similar one-time operations. Best of all it is a date it, put it on the shelf and forget it power source, standing by for the next five years in case it is needed.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

Electric Fuel also manufacturers a smaller version of this battery technology for cellular phones and P-D-A’s. You can find out more about this new power source and the technology behind it is on the web at www.electric-fuel.com. (K4CPX)

You keep asking what laws were violated. You keep saying no laws were violated.

I told you what infractions occurred - they were sufficient enough for the New York Police Department to arrest three people, the two trying to win the brewery prize and the 'talent' (ugghhhh) accompanying them and participating in the event.

I answered your questions about what laws were broken..

The FCC will answer the others, to see if the alleged offenses warrant revocation of the license. The license may have monetary value, but to retain it, you must not use it irresponsibly.

We shall see.

I asked what the penalties were under the law. You have not yet answered
the question.

> I answered your questions about what laws were broken..

What offenses did the station commit? How was the remedial action by
Infinity inadequate or indicative of a lack of assumption of
responsibility? What more could the station have done?

I don't know how to break this to you, but lists abound in radio, all
the time. There are "emphasize" lists, "avoid" lists, lists for special
programming, holiday lists, and lists of every description. Listeners
don't program radio stations directly.

That has got to be the least thought out response I have read here ever.

Stations try to anticipate how their audience is going to react. An example would be deciding when the first date folks may want Christmas music at the start of that season. Research may be done, or it may not. In any case, the objective is to find out when that music is appropriate.

It's about being appropriate. Jokes on the morning show about airplanes falling apart in the air may be funny to some, but not in the aftermath of a local airliner crash.

A-p-p-r-p-r-i-a-t-e.

After 9/11, many programmers thought some songs might be considered by most to be in poor taste. I doubt many oldies stations wanted to program "Leaving on a Jet Plane" the next day.

The list circulated to help fellow programmers consider songs that they might want to put on hold for a day or a week or whatever. There was no dictate to do so, but good taste overcame at least one programmer and he put some thought into not offending listeners and reacting to their

sensibilities.

I was listening to WDRC-FM Hartford on 9/12 and heard the Bee Gees' "New
York Mining Disaster 1941" start up ("In the event of something happening to
me..."). After that line, the song was quickly faded out and replaced by Sly
and the Family Stone's "Thank You (Fa Lettinme Be Mice Elf Agin)." No on-air
explanation was given, of course, but I'd imagine someone there thought a
song about digging for survivors of a disaster was inappropriate at the
time.

I didn't say I wasn't willing to relocate. A two-state radius is pretty broad (Utah to Illinois, South Dakota to Texas). California is just a little farther that I would like to go considering how much I would probably be making.

S.E.N.
Relocated three times already, anyway.

Hello All,

I'd like your opinion on a broadcasting school.

What's the collective thought about the "Broadcast Training Network",
at the URL http://www.learn-by-doing.com/index.htm ?

I've been interested in getting into radio for some time now,
and would like to attend a school that will teach me all the various
things about it. This one interests me because they claim that
they'll put me into a real working commercial station to get
experience. I like that idea.

Naturally, though, I'd like to hear any thoughts, opinions,
experiences, about this school. Their website is the usual marketing
hype, so I'd like to hear any "real-world" type of information.

I'm most interested in this school's credibility. Do they do what
they say? Has anyone taken any of their classes? What have you heard
about them, etc.

Thanks. I appreciate any input.

Gordon P.

I don't know. I am not familiar with New York state law. However, I do know
that if you are arrested, you are usually charged with a crime.
Since the three that were arrested have not been able to claim 'false arrest', I
assume that their arrests were valid.

What are the penalties? Go to a New York lawyer, pay him/her the fee, they'll
tell you. I don't know what they are.

Perhaps you heard the original pirate broadcasts of the mid-1990's. Maybe you were there when TTN pulled the plug on a rebroadcast of the "Sloppy Sex Extravaganza" on PanGlobal Wireless. Or maybe you don't know what on Earth I'm talking about.

Anyway, you'll get an experience unique to broadcast listening if you tune in to WBCQ - The Planet on shortwave! Premieres 27 September 2002.

Fridays: 2100 - 2130 UTC on 7.415 MHz
Saturdays at 1900 UTC on 17.495 MHz

Tune in to the music, commentary, bad Spanish and worse comedy! Hey, it's a half hour...what have you got to lose?

PanGlobal Wireless is not the pirate broadcast of days gone by; we've simply stolen the name because we liked the show. Honest. Really. Sh-h-h! Don't tell Allan H. Weiner what we're up to!

2881. WIBW-FM moves to 94.5

Newsgroup: rec.radio.broadcasting

Source record: 9645

It's been known for some time, as part of the "big move" that moves KCSX (97.3) from Moberly to Lee's Summit, that WIBW-FM in Topeka would have to move. The Time for WIBW's move has come upon us.

The changeover officially occurs at 12:01am Wendsday, September 15. WIBW-FM, Topeka, moves from 97.3 to 94.5. They are promoting the "Top 30 of 97 Country." Listeners are encouraged to write down all the songs as part of a contest tommorow morning, where having the total list could pocket someone $945 during the 7:00 hour. In addition, they may "flub up," affording someone $94.

One thing that is in the dark is what happenes to KJCK "Big Kat" 94.5 in Junction City. They are tennatively scheduled to move to 97.5, but as far as I know, they have not applied nor gotten a CP for the move, per search on the FCC website. KJCK is a little too far away to receive well regularly, although I could probably pick it up if I take my car to Topeka.

Your choice is understandable -- I'd be loath to leave California --
but you should understand and acknowledge to yourself that you have
made a conscious choice to limit your opportunities.

I went when and where I had to go to further my career. I have
relocated across country three times, (NY to CA, CA to OH, OH to CA)
and twice within California. FWIW I've been in my present job for
almost 15 years, so I'm not exactly a "floater."

That is what stations want to avoid in certain circumstances.

Again, stations try to program proactively. They try to do what is appropriate, what will get listeners to stay around, not just slap anything on the air. There are too many alternatives in most markets to just run the risk.

Radio stations may be "everywhere", but radio stations that want or need to hire YOU and your particular talents and skills might not be located in your region. Radio journalism is "programming" and proper fit is essential...as opposed to things like sales, engineering, or management. Even the biggest names in radio and television have relocated more times than they would care to think about. When you reach the big time, you will be forced to relocate to a major market...if you want to get paid what you are worth.

> I would also think any recent college grad would be interested in such an
> explaination, too.

It depends upon which area of broadcasting he intends to pursue. In this area, the salespeople, managers, and engineers have all been around for decades. The on-air and support people are in and out of here like a bus depot.

As a famous newscaster would say, "And that's the way it is...".

There are probably not enough stations in the immediate are you want to stay in to guarantee a job, or, particularly, one where you would learn something useful. Any communications or journalism program is barely adequate to start working in the real world. Pick a station where you will be with competent people you can learn from. Ratings are a good sign of a good station, if the station is in a rated market. If you are in the plains states, agribusiness awards and recognitions might indicate a good news station.

Even assuming htere were interesting opportunities in Kansas, how often do they have openings? The wider your geography, the better your chances. Also, getting out of the same old, same old will help you gain perspective. See the world, or at least something other than Kansas.

Most of us had to move from market to market when we started. My second station (actually, cluster) was 2500 miles from the first one, and the third was about that far from the second one. Etc.

This leaves you with Dallas, Houston, Chicago, St. Louis, Maybe Salt Lake City, and maybe Oklahoma City for a market that pays "decent" wages. As others have mentioned, moving is a way of life in radio. I moved from Ohio to Michigan to Ohio (2 stations) to Texas (4 stations in 2 cities) in a 12-year period.

When the last station, a TV station by the way, dropped news I elected to stay in the same town until my kids were out of High School. That meant a total 15-year commitment to Houston and I dropped out of radio/TV for a "real" job. Great stability for the family, but terrible on the career.

Now that my son's out of High School, I'd love to get back in but, like you, I need to stay within a reasonable distance. This is to appease my wife who does not want me to "take her away from her family again." That reasonable distance pretty much limits me to Texas, Oklahoma and Arkansas. It seems like a big area to cover but realistically it's a career killer because of severely limited options.

That is making an assumption contrary to available evidence. It doesn't matter how much a station does not permit something, people can and will do it anyway. That fact that that O&A were canned would indicate that they DID violate some prohibited behavior.

Much is made about how one cannot yell "fire" in a crowded theater. That is nonsense. Nothing whatsoever would stop you or me from standing up and yelling fire in any crowded theater on the planet tonight or any other time. There would be consequences, but nothing would prevent us from doing it.

Likewise, there is no way a station can prevent talent from doing almost any heinous thing on the air before the fact. All they can do is to clean up after. I would say that the station did exactly that.

Why don't you call the programming staff at the nearest Clear
Channel-owned radio station and ask them? I'm sure you'll get much
the same answer you've already gotten here.

I hope you're not going into this "senior project" with any
preconceived notions about the matter. From your comments, it would
seem that you have already made up your mind and are willing to ignore
any facts to the contrary. If so, don't expect to be graded very
highly on your project.

Unless, of course, your instructor is of like mind and has encouraged
a particular conclusion, which wouldn't surprise me.

I'm in Canada, larger towns that pay well are really spread out up here. I worked every major market from one end of the country to the other. (only skipped the East coast and Winnipeg) Kids are the problem, "we want to stay here and graduate high school with our friends". That statement is a killer on broadcasting careers. ;-)) You really do have to move, it isn't a bad thing, it "widens you" of course eating at McDonalds can do the same thing. -)) My wife is in the business, so that made for a more "understanding" attitude.

And wasn't that organ music on a three-minute loop, which meant it was heard a jillion times on each show? I remember hearing this on WLAC in Nashville late on Sunday nights every so often--just didn't remember the title or the rev's name (and the name to me is suspect, considering that "Sesame Street" had a character named Roosevelt Franklin).

Of course, some of the things that John R. and the Hossman used to pitch on 'LAC were suspect in a secular way, too...

yes, just like on 9/11 of this year, the first song I heard when I turned on the radio that morning was the Foo Fighters "Learn to Fly"...I normally love that song and would usually crack it, but it didn't feel right to me on the one year anniversary so I changed the station. No one had to tell me to do that...I am a big boy and can take care of myself. :)

Station management can and should pull the plug before the offense is committed.

It is not impossible. Nor is it unprecedented.

*Well..I have been in touch with one employee...through email..thing
is I'd rather get in touch with email first and then phone...I
mean.fuck nevermind. Anyways....I thought I was already done with the
goddamn thing but my advisors want me to interview one more employee
or some shit...the employee I got into contact with was very helpful
and in a way I do somewhat see them as
guidelines....so....FUCK!!!!!!!!!!!!!!!!!!!!!!! Sorry frustrated at
this whole thing (Initially I wanted to analyze the songs on the
list...basically get to which were offensive and what not but stupid
advisor wanted me to go into the company and all)

They moved too. Turns out that they didn't need a CP to make the move,
since it did not involve a tx site or power change, just a change in frequency,
which was itself already authorized in the rulemaking that moved KJCK. A host
of other stations moved/are moving as well; KNCY Nebraska City from 94.7 to
103.1 is one.

WCBN WILL DESTROY YOUR FEEBLE FORMA

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

Really! Who would be the monitor? Who would take reponsibility for
"false pulls"? And do you run the station on a fifteen second delay at
all times?

Please supply the details. I cannot even imagine how one could "pull the
plug" in advance.

If you had called a local ClearChannel station and spoken to an employee
there, you would also have some assurance that you were, indeed,
speaking to a ClearChannel employee.

"Richard Fry" <rfry@adams.net> wrote in message news:<aklemv$n0j$1@xuxa.iecc.com>...
> Maybe your stereo speakers are out of phase?

Booming bass is not a sysmptom of speakers being out of phase.

In fact with a mono source signal, where the feed to both speakers is
equal electrically, it's the equivalent of everything being mixed to
the center of the stereo spectrum and we'd expect the bass to
disappear.

Kevin Becka, the Home Rcording Editor at About.com wrote an excellent
article about phase at:

What's new with my radio work? Go to: http://www.comedyorama.com to find it.

WILLOUGHBY GOES NATIONAL
I have just completed six new episodes of my surreal SCI-FI/comedy radio serial, "The Whithering of Willoughby and the Professor," which brings the series up to 18 half-hours. They will be available for stations to broadcast sometime next year. In addition, I have digitally remastering the first 12 episodes with new introductions and closings. The first six episodes will be made available to stations this Winter. In addition to co-writing the scripts with Robert J. Cirasa, I produce and direct the shows and I perform all the characters voices for the series.

WILLOUGHBY GOES LITERARY
Robert J. Cirasa and I have just written a short story featuring Willoughby and the Professor which appear in a new anthology book, entitled: It's That Time Again! The New Stories of Old Time Radio, scheduled to be published in mid-December 2002. The story is called "Willoughby Goes and Gets It." The concept for the story was to work within the more na�ve and wide-eyed science fiction style made popular in the 1950s while using original characters from our own current national public radio series, "The Whithering of Willoughby and the Professor." The result, we believe, is a both post-modern tribute and a story that holds up on its own merits.

HALLOWEEN BROADCASTS
More than 30 radio stations have picked up my Halloween-themed shows for this October. The shows include a radio play called "Halloween Happening" and "We Take You Now to Grover's Mill" - my radio documentary of the making of the "War of the Worlds" broadcast, which features my interviews with John Houseman, Howard Koch, Arthur Anderson and townspeople of Grover's Mill who where alive at the time of the broadcast.

HOLMES GETS GOOD REVIEW
My parody radio series, "The Misadventures of Sherlock Holmes," was given a positive review in the latest issue of Scarlet Street magazine. Read it at: http://www.comedyorama.com/soundforsale/graphics-sfs/scarlet-street-holmes-02.pdf.

NATIONAL PUBLIC RADIO TO DO PROFILE
NPR's "All Things Considered" will be airing a 17 minute national feature story on me sometime before the end of the year. It will deal with my childhood, Willoughby and the Professor, voice acting and Daws

Butler. More info. to come on this one. The piece may also be rebroadcast on NPR's "This American Life" next year.

2905. Yiddish-Israeli Radio Program a Hit with Listeners on WERS-Boston

Newsgroup: rec.radio.broadcasting

Yiddish-Israeli Radio Program a Hit with Listeners
By Jason Nielsen
The Jewish Advocate Staff
http://www.thejewishadvocate.com

Disc jockey Pnina Shamsi, host of the Sunday morning Yiddish-Israeli music program "Chagigah" on WERS (88.9 FM), connects with her 4,000 listeners through musical traditions and humor.

The music and show focuses on the hope inherent in Jewish culture and heritage. While seemingly disconsolate music styles, Yiddish and Israeli music connect a bridge between the past and present with the genre's humor. With music dating as far back as the early 1920s to more recent hits by Rami Kleinstein, the tracks conjure up strong feelings for Israel and the past.

"People call in with their stories not necessarily only connected to the music, but also cultural things," Shamsi said. "Through the expression of music, we can connect on two levels: music and culture. Yiddish music has a light-hearted humor that jokes around as well as some Israeli music. "

The 20-year-old Emerson College junior took on the show on the school-owned radio station as a way to continue her work within radio while still observing her religious beliefs. Shamsi was offered the DJ post for a Saturday children's program, "The Playground," but had to decline because she keeps Sabbath and does not work on Rosh Hashanah.

An audio and radio major with minors in psychology and writing, she said the music makes her feel as if she is in Israel. A first-generation American, her father was born in Iran and moved to Israel when he was 3 years old. Her mother, the daughter of Hungarian Holocaust survivors, came to the United States when she was 2.

The 18-year-old "Chagigah" program has developed a devoted following. Trying to make it a fun show, Shamsi tries to connect with her listeners as much as possible, and they are not afraid to give her a call with their bad jokes, funny stories and personal anecdotes. One Sunday morning, Shamsi recollected, she had a shoulder pain that flared up. Kvetching over the air, she asked her listeners for a remedy.

"Ten or 15 people called in with their remedies from heat packs, ice packs to massaging," she said. "The WERS engineer even called me up on the red, dusty phone that nobody touches and said he had the name of a really good acupuncturist."

The format of the 8-11 a.m. show starts with Yiddish and Klezmer, slowly wading through to Israeli folk songs and then Israeli rock. As the morning moves on, Shamsi gets into more loud music. Without focusing on one particular style of music, she does allow five-song sets to explore stylistic peculiarities of the different genres.

"While some people say I focus more on Sephardim stuff," Shamsi said, "I try to give people a wide range, so everyone is happy. If I have a song set of belly dancing, I will go with it for the whole set, break and then maybe go into some folk-guitar music."

Yiddish music and Klezmer, which are each experiencing recent revivals, emote strong personalities. While enjoying the "old sound," Shamsi explains that an integral part of the Klezmer music's personality is the clarinet. Even without understanding Yiddish and Hebrew (which Shamsi can partially understand), the DJ said the music transcends any language barrier. Some of her favorite groups include Mein Yiddishe Mame, the Klezmer Conservatory band and the New Orleans Klezmer All-Stars.

She contends the re-interest in the genre has to do with keeping a grasp on a culture slowly disappearing. "The people in our lives that spoke, sang Yiddish to us and played the songs are slowly going away," Shamsi said. "We miss something, so we are looking we see that the people are dying, and unfortunately, the culture and language is going as well."

Israeli music played on the show focuses on enjoying life. She believes Israeli artists have an ability to make light of issues in spite of the problems confronting the country. Some popular Israeli artists presented on the show include Israeli classic rocker Eyal Golan, poppy Sarit Chadad and the institutional Rami Kleinstein.

When the Brookline resident started the show last summer, she included 15 minutes of news from Israel. As the conflict escalated, she discontinued the news report.

"It is hard to have a news segment and talk about 15 people that were killed and hop right into the music and forget about it," she said. "Every so often, I will pipe in if breaking news happens, but I think it is understood between my audience and myself that we just are there to have a good time."

The tensions of the Israeli-Palestinian conflict have not entirely missed the program. Shamsi said how people get "a little sensitive and call in" if Arabic lyrics mix with Hebrew music, which occurs in the music of Etti Lebi and the Spanish-Israeli artist Alabina. "I can see how they might get confused because it is an Israeli show, but I am not trying to promote intolerance," she said. "Music is music. Middle East is the Middle East. I think everyone is an Israeli, everyone is a Palestinian, and everyone is the same thing."

Station management, who is ultimately responsible for anything that goes out on the air as entertainment..

> Who would take reponsibility for
> "false pulls"?

Station management, who is ultimately responsible for anything that goes out on the air as entertainment.

> And do you run the station on a fifteen second delay at
> all times?
>

No - but if something is going in a direction which could expose the station to some liablilty or problem, station management CAN pull the plug. And they do.

For instance, if station personnel orchestrate a stunt, say, involving a couple having sex in a church and send a staff member to broadcast it on the air, they can pull the plug before it airs. Or pull the plug on such a contest. The "15 second delay" has nothing to do with it.

They would have to explain themselves to the audience that would be disappointed that the 'sex in a church' stunt didn't air. But I'm sure that WNEW(FM) management now, would have preferred that path -- to explain it to the audience who enjoys such pandering entertainment.

It's certainly better to say "sorry kiddies, we had to pull the plug because the stunt violated our station standards and may have gotten us into trouble with the FCC" than to have to explain it to the FCC in their inquiries, I would think.

> Please supply the details. I cannot even imagine how one could "pull the
> plug" in advance.

Just did. While you cannot necessarily pull the plug on a talk show host saying "they could put s**t on a bun and I'd eat it" -- you certainly can kill a stunt of this nature. They didn't plan it in 15 seconds . Please do not give them the intellectual credit for that. So, if a contest about having sex in the most unusual place is in progress, it can be stopped as it starts (or killed before it starts).

2907. For sale: Part ownership in AM. The Radio Crazy is back!

For sale:

Part ownership in class "C" (formerly class IV, aka graveyard, aka local, sillies!) in small Idaho town. Only station in community. Joint venture. Cheap! Active or inactive investors with at least $5,000 each are welcome. All investors would be on the board with full voting rights, if desired.

Total: $85,000 with $25,000 down. Seller financing. NO REAL ESTATE. You heard it first here, kiddies!

The "Radio Crazy" is back. I'm not THAT crazy! Last job (2001) was Chief Engineer for 5 KW fulltime AM in New York City. I think that is a mojor market! (Duh!)

Please contact via email or telephone. (478) 741-1710. Macon, GA.

2908. Question about External FM Antennas

Newsgroup: rec.radio.broadcasting
Date: 2002-09-21 14:26:27 UTC
From: mavtyfan1@aol.com
Message-ID: <amhvij$l5i$1@xuxa.iecc.com>
Source record: 9671

Hi, I live in Central Connecticut and have been trying to pick up WCBS-FM 101.1 in New York. Here's the problem: We have a station here in CT at 101.3 which is blocking out CBS-FM. I was told by online friends that the GE Superadio might be able to pick it up ok. Well yesterday I went to Sears, no luck. Next stop: Radio Shack who doesn't carry GE products but does carry a similar product. I took a chance and bought it, but it doesn't get CBS-FM at all. However, it does pick up other NY FM stations.

OK...here is my question. Is there another radio I should try? Should I try an external antenna, and if so, what kind? If I went that route it would have to be one that mounts to the radio, since I live in a condo complex where we are not allowed to place anything on the roof.

I could use any advice you could offer. I really would love to be able to pick up CBS-FM. Four of the DJ's I listened to during my pre-teen and teen years are there and I'd love to be able to hear them again. I'm disabled and don't get out much so if I could get this station, it would really be great :)

Thanks for any help you can offer.

Lauren

>Anybody remember that one?
> GTT

GT,

You'll probably want to check out the story and demo at:
http://www.reelradio.com/bw/

Beau Weaver, then of KNUS-FM Dallas, says it won Billboard's
Syndicated Program of the Year Award in 1975.

In Boston, PD/PM driver Clark Schmid used Fantasy Park as the launch
for 94.5 WCOZ-FM, the first serious FM competition to WBCN. After the
special, Clark was the sole live program, but the lineup expanded to
eventually include (later Reelin' In The Years host, XM Classic Rock
Programmer) George Taylor Morris in mornings with news from
(NBC/Source original News Director & Consultant) Jim Cameron,
Entertainment Weekly's) Lisa Karlin mid day, Ken Shelton evenings, and
Mark Parenteau (later WBCN, XM Comedy Programmer)starting with late
nights and moving to PM drive once Scmid left the air.

In Seattle, KZOK-FM's PD Dave Richards unleashed a locally produced
multi-day compilation of all star radio concert and live album
recordings called LollaPuyallup in 1993 & Woodinvillestock in 1994.
Each ran on the 4th of July weekend. The station was thrilled with the
phone response... The Washington State Patrol wasn't. Would be
concert-goers clogged their phones, Seattle's already heavily traveled
freeways and local streets in the communities whose names were
incorporated into the events... All searching for a show that was too
good to be true.

Ahhh... theater of the mind... where every seat is perfect!

Ray Collins <rcol@intergate.ca> had written:
| I'm in Canada, larger towns that pay well are really spread out up here. I
| worked every major market from one end of the country to the other. (only
| skipped the East coast and Winnipeg) Kids are the problem, "we want to stay
| here and graduate high school with our friends". That statement is a killer
| on broadcasting careers. ;-)) You really do have to move, it isn't a bad
| thing, it "widens you" of course eating at McDonalds can do the same
| thing. -)) My wife is in the business, so that made for a more
| "understanding" attitude.

The bottom line is the answer to the questions that one has to ask
oneself at certain points:

Is this a career worth sacrificing my family for?

Is this a career worth giving up my home community for?

Considering the lousy pay, poor working conditions, and the
disrepect that prevails at most (not all, but most) stations
regarding radio news and news people, the answers are obvious for
almost anyone except the very, very lucky few.

Oh, and a personal note: I know Mr Nuzum from other venues and he
is not a bozo. The fact that the Conventional Wisdom Crowd is
treating him as though he were one is something that I find revolting.

It's very hard to discriminate against a strong local station on a channel
immediately adjacent to a desired distant station. The best way is to use
a rooftop Yagi antenna which can be oriented to suppress signals coming from
the direction of the local while allowing reception of the distant signal.
This will not work if you are located such that the local signal is coming
from the same direction as the distant one. If that be the case, you are
pretty much out of luck.

Good luck!

Really want to hear WCBS-FM? If you're SERIOUS about it, you can do it, but not with a Superadio.

You need two things: directionality and selectivity. For directionality (focusing your receiver's "ears" on a narrow slice of your radio horizon), you can't beat an external Yagi-type antenna, ideally an APS-9 or APS-13 or similar. If you really care ONLY about getting WCBS-FM, you can at least save some money by not installing a rotor; just point the thing southwest at NYC and leave it there. (You're still looking at $100 or so for the antenna, plus mounting hardware, lead-in cable and installation.)

For selectivity (making sure your receiver is hearing just 101.1 and not 101.3 or 100.9), you need to start with a decent component-type FM tuner - then get someone to open it up and replace the factory filters with narrower (110 kHz is good, generally) ones. If WKCI on 101.3 is still a problem, you can install a 101.3 trap (I use ones from Microwave Filter that cost about $25) - or you can try something even more dramatic: installing a second antenna aimed AT WKCI and what's called a "phasing box" that will combine the signals from both antennas in a way that cancels out the unwanted WKCI signal and, ideally, leaves WCBS-FM intact.

You can find good used receivers for less than $100 if you're lucky; the filters are cheap (a buck or so each), but need to be installed by someone who knows what they're doing.

Good luck!

The GE Superradio has great AM sensitivity and good audio but but
terrible everything else.

Try the Crane CC Radio. It tunes in much smaller increments and you
might be able to tune out the local. The best bet would be to combine
it with a directional antenna if the two stations aren't in the same
direction from your location. That's going to be tough if you can't
mount the antenna outside.

>Ahhh... theater of the mind... where every seat is perfect!

Unfortunately, that's something most of today's broadcasters have forgotten about, and young people coming into the business have no clue about it whatsoever because they've never been exposed to it.

I have a teenaged intern who went slack-jawed when she heard an aircheck of the legendary East Coast morning man, Jack Gale, whose whole show was "theatre of the mind," complete with a cast of recurring characters that were all actually him. This very bright, talented kid had no idea such a thing was possible, and nothing like it would ever have occurred to her. It gave her a whole new insight about the power of our medium.

I think a lot of the spread of team morning shows is a misguided search for this sort of effect. Programmers somehow think putting more people on mic will make some kind of magic in and of itself. People stage idiotic and/or gross stunts like the O&A fiasco because they no longer understand how to use words and sounds to stimulate the listener's imagination.

Personally, I'd rather listen to one really creative on-air performer working by him/herself to paint pictures in my mind, than a roomful of idiots laughing at each others' dirty jokes or pulling stupid pranks in public.

Lauren,

A VHF-TV-only antenna. The FM radio band is just above TV channel 6. Most good stereo sets have a terminal for an external antenna.

If you can find a VHF-only external TV antenna, and point it toward New York (and away from the local station) you *might* be able to get it.
If the interfering station is in the same direction from your home as WCBS-FM's antenna, however, you're still going to be out of luck.

Years ago, a lot of firms used to make FM-radio yagi receiving antennas. A search on the net shows that Winegard still does, look here --

http://www.tvantenna.com/products/fmreception/fmantennas.html

The second one on that page is what I'm referring to. You would not need a rotor if WCBS-FM is the only station you want to hear.

The GE Super Radio is great for AM, but for FM it's not necessarily any better than a good sensitive stereo receiver. It is still available but you would have to order it from the web. Sears nor Radio Shack carry them.

Antennas and receivers may be either 300 ohms or 75 ohms impedance - you can match them with a transformer (which is a couple of bucks).

Radio Shack probably doesn't carry FM yagis, as far as I know. You would have to go to the web, probably.

Greg

> a rooftop Yagi antenna which can be oriented to suppress signals coming
from

Just a quick question about this setup... Do you orient the Yagi
horizontally or vertically?
95% of today's FM's are circularly polarized, so which way would you set
that baby up?
I am familiar with a company in Cincinnati that does frequency checks for
stations well over 100 miles away. I know of 1 station they measure that is
a class A (6kw) 70 miles away and there is a 1st adjacent class B in
Cincinnati. I've always wondered how they did it.

Where do you live? In my part of the country there are cochannel stations
every 100-150 miles. In all directions. 300 miles is out of the question.

Your best chance in your situation is to use a sensitive FM receiver with good selectivity. You might look at the Cambridge Soundworks Model 88 at ~$150, which not only has those characteristics, but sounds great, as well. Maybe you can order one on approval?

There is no practical way to use an external antenna, or to insert a filter for 101.3 with many table radios, because they don't have the input connector needed.

Besides, any discrete filter that attenuates the interfering signal on 101.3 also will greatly affect the signal on 101.1. Don't bother, even if your receiver does have an input for an external antenna.

R. Fry
Quincy, IL

PS: WCBS-FM might be operating from temporary facilities following the WTC disaster, and not have their normal coverage right now. Maybe someone else on the NG will know?

I have heard anecdotally that rooftop antennas are best polarized
horizontally.

If all you need to do is measure frequency, you can tolerate a fair amount
of interference -- particularly if the station being measured is willing
to cooperate by killing its modulation.

Not so. Not so at all. Upgrading the internal filters in a good receiver (Onkyo TX-9090 or the like) to 110khz will do a fine job of improving adjacent-channel selectivity without damaging the signal you're trying to hear, except perhaps by adding a bit of distortion (to what, in WCBS-FM's case, is a heavily-processed signal anyway).

As for the external traps I'm using (Microwave Filter 5KFM- series), you can see the response curve here:

http://www.microwavefilter.com/fastrap/response.htm

(Look for Response Curve #18). Yes, it attenuates the adjacent-channel signal somewhat, but depending on where you are in Connecticut (I'm guessing somewhere in New Haven County by your question), by no more than 15 dB or so, and you should still have plenty of 101.1 signal left even after that.

>PS: WCBS-FM might be operating from temporary facilities following the WTC

>on the NG will know?

WCBS-FM, like most of the NYC FMs, was on the Empire State Building's ERI master antenna before 9/11/01, and nothing has changed since then. The full details on the stations that were affected (most TVs, 89.9, 93.1, 93.9, 103.5) are here:

Hello all,

the former URL of the National Broadcasting Corporation, Nigeria

http://www.nbc-ng.org/

now leads to a download of a 0190 dialer (5-6-5-23.exe by
download1.0190-dialer.com) Beware! Do not visit this URL if you did
not turn off ActiveX in your browser! Then the download would start
automatically.

I don't know if those dialers can be dangerous in other countries, but
in Germany they can lead to a huge telephone bill as they change the
dial in number of your internet account...

While Google still lists that URL, it was deleted already from the
radio-portal database, which lists more than 37.000 radio related
Links.

Regards,
Willi, DJ6JZ

Well........20yrs ago I lived in Northern Oklahoma, and could recieve Dallas at 280 miles away with a 60 ft antenna and an FM signal booster (magnum 2002 unit). Clear strong stereo day and night from Dallas. (though Dallas had lousy programming). I prefered to listen to KAYE (100 watter 60 miles to the northwest - college radio), and KBUZ in Arkansas City. Both stations played entire Albums both side and without commercials!!!!!!!!.......that was when radio is decent........I'd not spend money on such a setup today, with all the commercials/rant-jocks/and clear channel garbage, and the death of real college radio..... ;-(.

Sadly we note the recent passing of another of radio's one-man cast of thousands, Ron Landry who died 09-16-02 in LA after a year-long battle with cancer.

Formerly mornings @ WDRC Hartford & afternoons @ WBZ Boston, before moving to Los Angeles and KGBS, 1969-74; where he became nationally known as the co-creator of the Grammy winning "Ajax Liquor Store" album with the late "Emperor" Bob Hudson, Ron's broadcast career wrapped up at KFI, 1974-75.

Amateur Radio Newsline™ Report 1310 – September 20, 2002

Amateur Radio Newsline report number 1310 with a release date of Friday, September 20 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Out of the tragedy of 911 comes a new way for hams to be prepared. Find out more on Amateur Radio Newsline report number 1310 coming your way right now.

(Billboard Cart Here)

**

EMERGENCY COMMS: NEW DATABASE BEING CREATED

A new ham radio volunteer database is about to become a reality. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the story of how an act of terror lead to its creation:

--

A year ago, when al-Quida terrorists hit in New York City, Pennsylvania and Washington D-C, it was Joe Tomasone, AB2M, who put together an Internet based volunteer registration system. This strategy permitted ham radio volunteers to be quickly credentialed and dispatched to the various disaster sites where they were needed. Last May at the Amateur Radio Newsline sponsored Ham Radio Town Meeting in Dayton Joe explained that the database came about because he wanted to do somthing to help in the wake of the attacks:

--
Tomasone: "Not knowing what else to do I sent an e-mail to Tom Caruba, KA2D, who is the Section Emergency Coordinator for the New Yourk City and Long Island. I said that I know there is nothing that is nothing I can do to help, but let me know if there is somthing I can do to help.

And I expected that maybe he would request for me to make some phone calls or do some health and welfare traffic outside the area because the phones were in scetchy status in the New Yoork City ares. A short time later a request came back that I wasn't sure how to answer. They asked: '...can yoiu make a databse that will track the hudreds of requests we are getting [from hams] to come down and volunteer and can we put that up on the Internet so that it can be accessed.'

I thought about it for a few minutes and I said yes, I think we can do that."

--

Joe Tomasone did do it. The result was a steady flow of volunteers being dispatched when and where they were needed.

--
Tomasone: “On the registration page as many of you were able to see, it asked for basic information such as your name, your call sign, your address, contact information, what ARRL Section you were from and what your availability was. Now once that was put into the database, it was able to be queeried by a number of people who were given access to that portion of the siute. That enabled them to do searches based on a number of criteria.”
--

During his Dayton presentation, Joe mentioned his desire to grow what became known as the World Trade Center Volunteer Database into a general event activation management program for ARES, RACES and SKYWARN activities. Now Joe is about to get that project off the ground. But to do it he needs your help.

Joe tells Amateur Radio Newsline that making it happen will take people and new ideas. To that end, he has created an e-mail mailing list to solicit concepts and volunteers for this project. Anyone who is interested can either sign up directly by sending an e- mail to volreg-request@lists.ab2m.net or by visiting wtc.ab2m.net on the World Wide Web. Please note that their is no w-w-w in that U-R-L. Its simply wtc.ab2m.net.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ, in New York.

--

Dont worry if you missed that U-R-L. We are putting a link to it from our website at www.arnewsline.org. (ARNewsline™)

**

RADIO LAW: CC&R BILL HR 4720 ATTRACTS ADDITIONAL COSPONSORS

Good news on the legislative front. Five more cosponsors now have signed aboard HR 4720. This is a bill in Congress aimed at providing relief to amateurs faced with private deed covenants, conditions and restrictions when they want to put up antennas.

According to a story in the ARRL Letter, the list of cosponsors is now up to 23 members of the U-S House of Representatives who have agreed to sign on to the measure. This includes two radio amateurs: They are Oregon Republican Greg Walden, WB7OCE and Arkansas Democrat Mike Ross, WD5DVR. Walden was one of the two original cosponsors of HR 4720 with Texas Republican Pete Sessions. Walden and Ross are believed to be the only Amateur Radio licensees in the U-S House of Representatives.

It was New York Democrat Steve Israel introduced HR 4720 back on May 14th. The measure would require private land-use regulators such as homeowners' associations to "reasonably accommodate" Amateur Radio communication consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. (ARRL)

**

RADIO RECORDS: 24 GHZ RECORD BROKEN

The ham radio distance record for a contact on the 24 Gigahertz band has been broken again. Jeramy Boot, G4NJH, is here to tell us who did it and how:

--
On the 7th of September Dave Robinson, G4FRE, operating as WW2R/5, and Al Ward, W5LUA, made a record-breaking contact on 24,192MHz. Dave was operating portable in EM41HC near Natchez, Mississippi, and W5LUA was operating from his home in EM13QC, at Allen in Texas.

CW signals of 549 were exchanged. The distance, based on six-digit to six-digit grid squares, is 337.3 miles or 542.8 kilometres.

The sked was set up earlier in the week via e-mail with no liaison on any band, including cellular. Attempts to repeat the contact over the same path 12 hours after the initial QSO resulted in no signals being identifiable either way on 10GHz, suggesting the morning QSO was under enhanced tropo conditions.

Jeramy Boot, G4NJH
--

No signals were heard on 2 meters or 70 centimeters at the time of the 24 Gigahertz contact was completed. Previous experiments on 10 gigahertz last July also resulted in no signals being identified. (GB2RS)

**

ENFORCEMENT: 20 METER NET INTERFERENCE

Interference to nets on 20 meters in the South Pacific. Q-News Graham Kemp, VK4BB, reports from Brisbane Australia:

--
20 Meter interference. The Maritime nets on 14.315 MHz are having problems with interference. Chris VK2UW says the ACA have been notified and are monitoring, but a bit of help from Hams re locating the source of the Interference would be appreciated.

It is Man made and is regular both by making noises and CW type transmissions. The nets involved are the Pacific InterIsland Net on 14.315 MHz 0800 Z each night and Tony's Net on 14.315 MHz 7.00am EST each day.

>From Q-News Australia, I’m Graham Kemp. VK4BB, reporting for the amateur Radio Newsline.

--

If you hear the interference and can get a bearing on it, please report your findings to your nations Intruder Watch coordinator. In the United States that's the American Radio Relay League. (Q-News)

**

ENFORCEMENT: REPEATER ORDERED OF THE AIR

Back stateside, the FCC has ordered a repeater operator to take his system off the air. It happened in California. The agency's Daryl Duckworth, NN0W, explains the action taken:

--
Duckworth: "A repeater shutdown order was issued to Steven Decho, KE6FX, of Draper Utah regarding operation of his repeater or remote base on Mt. Disappointment in the Los Angeles area. Decho was told in a letter to shut down operation until he either obtained current coordination or submitted a detailed, specific and acceptable plan to the enforcement bureau demonstrating how he would prevent interference to the WA6UZS repeater operation."
--

Late word from the FCC is that Decho has replied to the agency. He has shut down the Mt. Disappointment system. (FCC, RAIN)

**

RADIO SURVEY RESULTS: 1 IN 10 NEVER HEARD OF IRLP

A recent survey conducted by the website Radio-Scanner.co.uk shows that 1 in 10 radio enthusiasts worldwide have never heard of the Internet Radio Linking Project better known as I-R-L-P. The survey did however show that only 20% of radio enthusiasts were against the idea, with a massive 71% backing it. 9% were apparently undecided.

The Radio-Scanner release did not say if the survey was limited to licensed radio amateurs or included others such as S-W-L's and monitoring radio enthusiasts. Also, no data was published regarding knowledge or acceptance of other ham radio Internet linking protocols such as I-Link, Echolink, Hamlink or E-Q-S-O. (Radio-Scanner)

**

RADIO LAW: GROUP WARNS ON NEW BROADBAND REGS

A consumer action group says that some proposed U.S. government policies could harm competition in the broadband Internet market. This says the Consumer Federation of America will result in reducing choices and driving up monthly fees for users who want high-speed access.

The C-F-A contends that by easing regulations on incumbent cable television and local phone companies, the Federal Communications Commission will hasten the demise of independent Internet providers who reach users over existing phone and cable lines. They say that , consumers will suffer as cable and local phone giants that currently dominate the broadband market will no longer be driven to lower prices and create innovative products.

The FCC ruled in March that cable providers do not have to share their systems or provide open access for competing Internet services, and the agency is currently reassessing its line-sharing rules for local-phone giants like Verizon Communications and SBC Communications Inc. (CFA)

**

HAM RADIO HELP: IHS LOOKING FOR VOLUNTEERS

The International Health Service is looking for ham radio volunteers with High Frequency portable operating experience to go to Honduras from February 14 to March 2, 2003. The International Health Service is a non-profit organization based in Minnesota that provides free health care to the people of Honduras. Applications are being taken through the beginning of October. If you are interested please contact John Kirckof, KB0UUP by e-mail to jmkkek@runestone.net or phone him at 320-634-4386. The I-H-S web site can be found at www.ihsofmn.org (HIS)

**

NEW RELEASES: PASSPORT TO WORLD BAND RADIO

Media Network reports that the 2003 edition of Passport to World Band Radio is now available for ordering from Universal Radio. Priced at $15.90, Passport to World Band Radio is the bible of S-W-L's and other radio monitoring enthusiasts around the globe. More information is on the web at www.universal-radio.com. (Media Network)

**

SPECIAL EVENTS: THE COAST GUARD AUXILIARY 63RD ANNIVERSARY ON THE AIR

The U.S. Coast Guard Auxiliary' 63rd Anniversary special event Radio Day is slated for Saturday October 5th. The event will take place at all Coast Guard Auxiliary Districts across the United States. Operations will take place on 40 through 10 meters. Listen for call signs like K1G, N2A, W8E and the like and Q-S-L as directed on the air. (Press release)

**

HAM RADIO IN CYBERSPACE: ARRL CENTRAL DIVISION NOW ON THE WWW

The American Radio Relay League's Central Division now has its own home in cyberspace. Its the creation of Clay Melhorn, N9IO. The good news is that there is no advertising of no pop-ups on this site. Oh yes, you will find it on the web at www.central.arrl.org. (Listener contributed)

**

CONVENTIONS AND HAMFESTS: LIMARC RESCHEDULED

The LIMARC Hamfest that was to be held Sunday September 15th has been rescheduled to Sunday November 10th because Mother Nature would no cooperate. According to Eddie Muro, K2EPM, inclement weather caused the last minute cancellation. Muro adds that the venue will remain the same -- Briarcliffe College in the town of Bethpage New York. More information is on the web at

www.limarc.org. (LIMARC)

**

CONVENTIONS AND HAMFESTS: CSVHFS IN MILWAUKEE

208 people attended the recent Central States VHF Society Conference held in Milwaukee Wisconsin. Conference Proceedings are available for $20.00 shipped domestic United States from the Central States VHF Society in care of Bruce Richardson W9FZ, 2330 Lexington Ave S. #312, Mendota Heights, Minnesota 55120 . And less we forget, next year's conference is in Tulsa Oklahoma on the last weekend of July. (VHF Reflector)

**

HAM RADIO NEWS SERVICES: GB2RS SUBSCRIBABLE LIST NOW ON YAHOOGROUPS

Also. the Radio Society of Great Britain’s weekly news bulletin is now available over a Yahoogroups mailing list. The news is posted over the weekend, after it has been released for non RSGB members. You can subscribe by sending an empty e-mail to GB2RSnews-subscribe@yahoogroups.com

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. (Listener contributed)

**

EMERGING TECHNOLOGY: NEW CATV CHIPS REVOLUTIONIZE SETY TOP BOXES

A new chipset developed in Canada may revolutionize set top T-V converter boxes. The spinoff of this technology could also impact future ham radio gear. Norm Seeley, KI7UP has more:

--
Zarlink Semiconductor of Ottawa Canada has announced availability of a new high performance chipset for tuning analog and digital RF cable TV signals. Zarlink's two-device chipset claims to deliver reception of all analog and digital cable channels, while allowing designers of multi-service cable set-top boxes to shrink tuner designs by 50% and reduce tuner costs by up to 20%.

The Zarlink chipset is comprised of a broadband tuner I-C and a new chip that handles frequency down-conversions and intermediate frequency amplification. Zarlink says that the new I-C’s implement active RF and IF amplification circuitry directly in the silicon wafer structure. In fact, the circuitry inside the count-down integrated circuit eliminates up to 40 external components from high performance, double-conversion tuner designs.

Norm Seeley, KI7UP.
--

The same Zarlink based technology could conceivably be used to shrink the size of other electronic gear that will require advanced R-F signal processing. This could include the next generation of digital communications ham radio gear. Ham gear that could be no bigger than a set-top CATV converter box. (Based on Zarlink release)

**

EMERGING TECHNOLOGY: INTEL TO INTRODUCE 3 GHZ PROCESSOR

Computer industry sources say that Intel may be moving up the introduction of its new 3 gigahertz Pentium 4 processor. Intel had originally planned to introduce the 3.0 gigahertz Pentium 4 processor by the end of the year. The earlier date will give manufacturers an edge in getting machines ready for the Christmas buying season. Intel also is reportedly accelerating the introduction of its 2.80 gigahertz Pentium 4 as well. (Via Internet)

**

RADIO IN SPACE: IO - A JOVIAN TRANSMITTER

>From the science page comes word of a kind of natural transmitter in orbit around the planet Jupiter that has no magnetic field. Roy Neal, K6DUE, has more:

--
There are many mysteries in deep space. Men and their machines are hard at work trying to resolve them. At the heart of unmanned space flight, the Jet Propulsion Laboratory, in Southern California is home to the huge antennnas that control the space ships that go out in the attempt to unlock the secrets. It also is home to amateur radio station W6VIO and many of the hams who run the station take part in the deep space endeavours.

The latest report says they have found that IO, a volcanic moon circling the planet Jupiter, transmits charged particles…easily detectable as power and noise. But the moon apparently has no magnetic field. These data were gathered by NASA’s Galileo spacecraft as it orbited Jupiter for the last 6 years.

The discovery took on importance last Fall. The researchers were trying to determine whether the moon created its own magnetic field inside the massive one generated by Jupiter, the largest of all our solar planets. When Galileo crossed the path of a magnetic field connection between IO and Jupiter, suddenly the density of the charged particles through which it was passing increased…but no magnetic field was

detected. Leaving the researchers, in their earthly control room, yet anther puzzle of the universe to solve.

For the amateur radio newsline, Roy Neal, K6DUE
--

More on this fascinating finding is available in cyberspace at www.jpl.nasa.gov/videos/Io (NASA-JPL)

**

INTERNATIONAL - CANADA: VO1MX APPOINTED ASSISTANT DIRECTOR

On the international wire word that Dan Goodwin, VO1MX, of Gander Newfoundland has been appointed as an Assistant Director for the Radio Amateurs of Canada Atlantic Region in Central Newfoundland. Goodwin fills a vacancy that existed in the central region of Newfoundland serving the major centers of Gander and Grand Falls-Windsor. (RAC)

INTERNATIONAL - ARGENTINA: HAMS TO GET 136 KHZ ALLOCATION

Hams in Argentina are getting access to the 136 kHz band. Roberto Beviglia, LU4BR, who is the President of the Argentinean national amateur radio society says that his group made the rules change request to the Argentine radio regulatory department. The government agreed. As a result, 135.7 to 135.8 kHz has been initially allocated to that nations amateur service on a secondary basis. (GB2RS)

**

DX

In DX, word that Laurence Howell, GM4DMA, is active as portable 9M6 on the High Frequency bands and 6 meters from Sabah now until the 30th of September. He is there to teach communications theory and to set up a new country headquarters communications base for the youth development charity Raleigh International. (GB2RS)

And the ARRL DXCC desk has announced a new 30 meter DXCC Single Band award. Applications for this award will be accepted beginning on October 1st. The new 30 meter DXCC certificates will be dated, but not numbered. (ARRL)

**

THAT FINAL ITEM: FLYING THE FLAG

And finally this week a look back to the way ham radio commemorated 9-11. This week its the story of two Florida hams who took to the air to fly the flag. In their case it was not by radio but rather in a Cessna 172 aircraft carrying several U-S flags as a part of an event called Flight Across America. The pilot at the controls was veteran aviator Steven Crow, K4CPX:

--
K4CPX: “What they did was to assign somebody from every state to carry their state flag into New York City to be there originally on 911. But they locked down New York City again for 911 so they had to do it a few days early.

Those airplanes that could not come to New York or wouldn’t because there were only fifty airplanes carrying state flags -- they wanted to have an airplane at each airport fly aloft for this commemoration which we did.

Then I came up with the idea of carrying flags for individuals. For people who wanted their flag commemorated with a flight on Flight Across America. So we did and we carried five flags aloft and we put a seal on them and signed them and gave them back to the people after we got back on the ground."
--

Accompanying K4CPX was Wendall Peterson K0REQ as co-pilot and Julius Ehland as the bearer of the flags. And on the morning of 9/11 the three made their way to Punta Gorda's Charlotte County Airport only to find it not to be a great day to venture into the sky:

--
K4CPX: "We went out to the airport anyway and stood around watching the rain sweep through. It is a pretty large airport with 6000' runways and I think we were the only pilots and the only flight that was even there that day."
--

Finally a slight break in the weather:

--
K4CPX: "We hung around and hung around another couple of hours -- all the time watching -- and looking at the RADAR -- and check it and see this stuff coming through. And we found a bit of a hole and decided -- lets jump in and take a quick look from the end of the runway and maybe aloft and maybe we can get the flight in."
--

And that's exactly what they did:

--
K4CPX: "We took off; climbed up to 1000 feet, turned sharply ahead of some heavy weather coming in and came right around the airport and landed on another runway and we were on the ground. We were probably in the air a total of maybe 12 or 13 minutes."
--

The important thing is that the flags were flown and returned to their owners. And while Steve and Wendall did have some 2 meter ham gear on board the Cessna they never bothered to turn it on. This was 9/11 and commemorating the day was what the flight by these two radio amateurs and their friend had really been all about. (ARNewsline™)

Here's an answer from Scott Fybus to a filter question. Scott is an FM entusiast, a newsman, but he has at least a little technical knowledge.

========== from Fybush to rec.radio.broadcasting =========
"Richard Fry" <rfry@adams.net> writes:

>Besides, any discrete filter that attenuates the interfering signal on 101.3
>also will greatly affect the signal on 101.1. Don't bother, even if your
>receiver does have an input for an external antenna.

Not so. Not so at all. Upgrading the internal filters in a good receiver (Onkyo TX-9090 or the like) to 110khz will do a fine job of improving adjacent-channel selectivity without damaging the signal you're trying to hear, except perhaps by adding a bit of distortion (to what, in WCBS-FM's case, is a heavily-processed signal anyway).

As for the external traps I'm using (Microwave Filter 5KFM- series), you can see the response curve here:

http://www.microwavefilter.com/fastrap/response.htm

(Look for Response Curve #18). Yes, it attenuates the adjacent-channel signal somewhat, but depending on where you are in Connecticut (I'm guessing somewhere in New Haven County by your question), by no more than 15 dB or so,
and you should still have plenty of 101.1 signal left even after that.

>PS: WCBS-FM might be operating from temporary facilities following the WTC
>disaster, and not have their normal coverage right now. Maybe someone else
>on the NG will know?

WCBS-FM, like most of the NYC FMs, was on the Empire State Building's ERI master antenna before 9/11/01, and nothing has changed since then. The full details on the stations that were affected (most TVs, 89.9, 93.1, 93.9, 103.5) are here:

http://www.fybush.com/wtc-recovery.html

2931. KKSU sale not final yet

Newsgroup: rec.radio.broadcasting
Date: 2002-09-25 13:54:16 UTC
From: Richie Kennedy <route56@route56.com>
Message-ID: <amsf68$1t2$1@xuxa.iecc.com>
Source record: 9691

There is a challange to the deal that would sell the timeshare alloted to KKSU to WIBW.

Last Friday, the Kansas Family Farm Coalition asked the Attorney General to look into it, stating that it believes that the sale of KKSU would not be in the best interest of Kansas Farmers. The AG has declined to do so.

Since I have not seen any indication that KKSU or WIBW have filed anything with the FCC, I would suppose that this group would probably file. If not, then everyrhing should go according to schedule.

When Steve Dahl began in radio, his show was "theater of the mind"
with an array of strange, off-color but discernable characters (even
if the voice characterizations weren't at Jack Gale level). Of
course, this is if his PD would let him. When he hooked up with Garry
Meier, he started going towards the "Real Life Radio" concept that
gave him his biggest success ("We talk about things that actually
happened, we use our real names, we don't do phony DJ voices"). The
combination of Dahl, along with Howard Stern and Scott Shannon's "Z
Morning Zoo," closed the book on creative morning/afternoon drive
radio and paved the way for teams endlessly giggling through joke
material and idiot stunts.

In Chicago, when Pete Stacker, the production genius at Q101, left in 1987 or '88 to do morning drive at WCLR, he initially got to do highly-produced adult humor (as opposed to adolescent humor) with a cast of characters that did include other people, but was not a bunch of forced gigglers reading show prep material. Before the station even gave it time to work, the call letters got changed to WTMX, a new PD came in and the show got reduced to Stacker as straight man for an actor doing a "Sout'(west) Side Chicaga" character, along with a talented woman named Beth Kaye being forced into a giggle-on-cue traffic reporter role. Of course, it was clean ('TMX, after all, being a Bonneville station), but something that had promise became just another limp AC format imitation of Scott Shannon. What a shame.

Hi all,

I am the President of a Non Profit French radio and would like to be help=
ed
...
We search for Broadcast Transmitter and Low Power HF Amplifier.

For instance (as i think my english is not excellent !) :

88-108 Working Broadcast Transmitter with 20 Watts Power
And/or 300 or 500 Watts Max HF Amplifier in the same band.

Whe have no money at all ... or so little ...

If you have and old (but working) such thing maybe you can donate ?
we will pay of course for the transport fees.

Wish i was not too boring, but if you can help us we will Greatly
appreciate...

U can contact me by answering this Post if you want...

Thanks in advance,

Regards.

Fr=E9d=E9ric.

2935. NRSC II measurements due?

_____

Response to Scott Fybush post of 9/24/2002 11:18PM

WCBS-FM is licensed for 6.8kW ERP from 404m HAAT. The path length from the transmit antenna to central Connecticut is roughly 90 miles. According to the FCC
f(50,50) propagation curves, WCBS-FM should have a field strength of about 19.4 microvolts/meter at that distance.

That value is expected 50% of the time at 50% of locations for a matched dipole receiving antenna located about 9m above ground level, in open country. Field strength inside buildings and in "urban clutter" can be reduced by 10dB or more, which means that the WCBS-FM signal could be around 6 microvolts/meter at the built-in antenna of the receiver in this application. With a strong local station on an adjacent channel, few, if any FM broadcast receivers would be capable of producing good stereo performance in a field strength that low, no matter how narrow the filters in its IF strip.

The scale of the plot of the filter response you referenced for the MFC 5KFM is 1MHz per horizontal division, and 10dB per vertical division. Therefore it would attenuate a signal centered 0.2MHz above or below the notch center frequency by something over 35dB, not the 15dB you stated. AND the response is changing very rapidly in those regions, which would add huge amounts of AM and differential group delay on FM signals trying to be received there. Obviously it would take an extremely large voltage at the filter input to have enough desired signal left at its output to be useful to a receiver. In the case of WCBS-FM in this scenario -- it just isn't there.

>
>If the surrounding terrain is favorable, that is.

If the terrain is VERY favorable, you won't even need an external antenna.

Back in the late 80s, I worked for KXIQ in Bend, Oregon. Our transmitter was
located in the Cascade mountains, on Jack Pine Ridge. 100kW from 5,000+ feet
in the air. Our signal was received regularly for about 200 miles to the
north, south, and east (the Cascade range was to the west.)

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

2941. For sale: Partial ownership of fulltime AM. Radio crazy is back!

Newsgroup: rec.radio.broadcasting
Date: 2002-09-27 18:01:05 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <an26d1cta1@xuxa.iecc.com>
Source record: 9703

For sale:

Partial ownership of fulltime AM in Idaho. 1 KW, class "C" (formerly called Class IV, silly!)

Total consideration $60,000 if letter of intent signed by October 11, 2002.

No real estate. Station can go to 50,000 watts, so saith the consultant!

Active or inactive investors for my crazy little joint venture welcome with at least $10,000 each. All investors would be on the board with full voting rights.

This station has been on the air since the 60s of the last century.

"AM bashers" or negative nabobs are clearly not welcome!

(478)741-1710 in Macon, GA. Call anytime you like or email, please. wrecktech@yahoo.com

I am a semi-retired broadcast engineer and Advanced Class ham.

73,

Meyer Gottesman, W6GIV

> won't hear it. (etc)

Virtually every radio has AGC (automatic gain control), but its function is to normalize the RF level seen by the AM detector in the receiver. AGC does not directly control the audio level.

If all stations fully modulate their carriers, then each will be heard with about the same loudness, no matter what each station's field strength is at the receiver.

In other words, the amount of dynamic range that a station chooses to broadcast controls how loud the station sounds with respect to others, and not the presence/absence of AGC in the receiver.

Source record: 9705

Scott is right about the selectivity and directionality, but if there are still strong signals close in frequency to the one you are trying to get, it's very possible the dynamic range of the RF section of the tuner will stop you from getting the weak station. Most tuners from the Far East are designed for sensitivity, but do not have good dynamic range. They use Automatic Gain Control (AGC) to make up for their inability to handle multiple strong signals close in frequency. The AGC senses the strong signals and lowers the gain in the RF front end, killing the weak stations.
Also, the strong signals mix together, making 'ghost' stations that are combinations of the strong signals, masking the weak stations.
The Model 88 has no AGC and a high dynamic range RF section, along with IF filters that are somewhat narrower than usually used, about 180 KHz wide. This compromises the stereo performance but gains selectivity against adjacent stations. The drawback is that the antenna input is also attached to a line cord antenna which might be a problem if you use an external antenna.
The other possibility is the Tivoli Audio Model One, which has a similar high dynamic range front end, and entirely separate external antenna input. It isn't stereo, but the Model 2 is, for more money.

2945. Help - NCE desperatley needs new console!!!

Newsgroup: rec.radio.broadcasting
Date: 2002-09-29 20:08:10 UTC
From: Matt Bartlett <nospam@seemessage.com>
Message-ID: <an7mjaorb1@xuxa.iecc.com>
Source record: 9708

Hello All.....

I am desperatley seeking help in ubtaining a new console for the high school radio station that I do engineering work for. We are the 2nd oldest HS radio station in the area (the station just turned 27 years old) and pump out about 300watts, covering a 10mile radius. Unlike the other local non-comm's, (and most commericals), our staff is live for 60 hours a week, and broadcasts all local sporting events.

Our studio console has been with us since the begining and is on its last legs. Our budget is depeleted for the year (which just started) due to emergency transmitter and tower repairs, and our yearly budget is so low that we would have to save it for about 10 years just to buy a new console. I am asking...scratch that....begging... any station out there that has an unused console, that you either upgraded out of, or moved facilities and have it left over, as long as it is working, has slide pots, and 12 channels (16 would be ideal), and is stereo, we would be glad to take it off your hands, and the school district will issue a letter so you can write it off as a donation at the end of the year.

Please reply directly to me: matt-at-liradio-dot-com.
(broken up for spam protection...please fix by replacing the at with an @ and the dot-com with a .com...there
are no -'s in my email address)

Thanks
Matt

What tuners do _not_ come from the Far East? A few, I suppose. Also, are tuners that are manufactured in the Far East necessarily designed in the Far East.

They use Automatic Gain Control

The real problem has to do with "capture ratio," the very useful FM characteristic that makes the stronger station on the frequency _completely_ cover the station with the weaker signal. This, as everybody knows, does not happen with AM transmission. If the signal from an adjacent channel station is bleeding through on your desired frequency, you are doomed if the station you want to receive has a weaker signal on it's assigned frequency at your location than the slop-over signal from an adjacent frequency. Yeah, there are ways to counter this effect with filters and other screwing around with antennas and the receiver, but you'd better be ready to spend quite a lot of money. Hell, IMHO there isn't a radio station in the entire U.S. that's worth spending a lot of money to receive. Oh, maybe WOR or WGN. I dunno.

(Good stuff cut)

2948. Fairchild Reverbs

>their sound quality.

I have a pair of them. They were made in the late 1960's. I worked at a couple of AM radio stations that used them during that era. They use three reverb tanks that look like the traditional Acutronics spring reverb that everyone used. The electronics are modular solid state, with a variety of controls to contour the sound.

They sound "OK" but IMHO the Mix-Mix "Master Room" reverb from the early 1970s sounds better. It uses the same spring reverb units, but they are suspended in motor oil which dampens the "Ker-Bong" sound.

This info might help. I had a similar problem. I wanted WOGL FM 98.1 in Philadelphia PA but a New York City local WSKQ FM 97.9 was splashing like hell. I was using a five element Wade FM antenna with several different Denon recievers. After a lot of experimenting I was able to get near perfect 24 hour reception with a Winegard 12 element FM antenna with a Denon TU-800. Also, if your stuck with not being able to use an outdoor antenna but you have some hight and the correct south/west look you might try grabbing a Grundig satellit 6000 off Ebay. It's a very old yet extremely hot portable reciever which has a narrow bandwidth option that really works. The Denon reciever has a supernarrow bandwidth control which also does the job but it's not a portable. All the new radios out in todays market just don't cut it when it comes to dealing with extreme cases.

Yeah, but with what kind of a directional pattern? Reminds me of all those AMs
back in the 60s and 70s that traded solid 5kW regional signals for wacked out
directional patterns with LESS usable coverage than they previoiusly ha. All
so they could tell their clients that "we're 50,000 watts!"

I've heard that the new Motorola "Symphony" DSP IF chip has been shown to work wonders on separating the various first-adjacent signals in Baltimore and Washington. Now we can hope that receivers using these chips will soon reach the market.

2955. Automation Software

Newsgroup: rec.radio.broadcasting
Date: 2002-10-02 11:09:19 UTC
From: mmakdad@uiuc.edu
Message-ID: <anek4v$286$1@xuxa.iecc.com>

We're looking into some automation software and are getting a little lost...

We're still using CartReady for DOS, and that machine is on its last legs. Pending that we have about $10k to spend (entirely) on a new system, what are the best options?

We have looked at a few automation systems already, but none of them have really fit our specific needs. As a 24/7 jocked radio station, most of our programming is actually still done live-assist, and we have little need for full automation. Essentially, what CartReady for DOS does right now are our direct needs (cueing carts, rotations, a big fat countdown timer, etc), and in the future we'd like to add both music and traffic log integration. We use CBSI and Selector, for reference.

Any ideas or suggestions?

Thanks a lot,
Mark Makdad
Engineer
WPGU-FM

Depending on your budget, I'd check out Scott Systems, which seems to
be the one chosen by most operations these days.
It can be as simple or as full featured as you like.

2957. Radio Production Software Suggestions

Newsgroup: rec.radio.broadcasting
Date: 2002-10-03 12:36:01 UTC
From: sbaitso@hotmail.com
Message-ID: <anhdjh$k19$1@xuxa.iecc.com>
Source record: 9718

I may have the opportunity to record and edit an hour long radio program for national distribution. Quality will be important. My question is, which software package should I look at to edit this program? I am familier with Cool Edit Pro 2.0 and love its features and interface. I am also familier with Pro Tools LE based systems (PC and Mac). The main use of this program will be editing and polishing the voices of the hosts and the guests rather than actual recording. What tools are out there? Which software packages should I look at? I love Cool Edit Pro 2.0, is there any reason to change? I know this can open up the PC vs. Mac can of worms as well, but that is another part of my dillemma, so I am interested in opinions along that line as well.

Thanks,

Andy

Either one will suffice. Use whichever you can get into production
fastest. If you can get your hands on each, see which one works better
for you. They do the same stuff, only the "ergonomics" are different
and people do differ on which they prefer.

INTRUDER WATCH: WORLDWIDE QRM FROM INDONESIA

Unlicensed stations allegedly operating from Indonesia are causing havoc to the D-X beacon monitoring system on 20 meters. Its interference being heard around the world as we hear from Q-News Graham Kemp, VK4BB:

--
The presence of Indonesian non amateur groups on the various amateur band frequencies in the 40 and 20 meter bands is causing severe concern for all the amateurs of Region 3 and the world over. While they use amateur radio frequencies for their regular communications, you will never miss the many calls for Prayers and the many jokes and Kookaburra pattern of laughing with old men and young ladies together.

The 40 meter band has several channels of 5 kHz intervals from the lower edge and these stations have their breeding grounds here. They graduate to other frequencies and move to 20 meter band, where they are on either side of the International Beacon frequency of 14100 kHz. Many of us in Region 3, cannot monitor any NCDXF/IARU beacons on this frequency.

Even though this QRM from Indonesians has been reported month after month to telecommunications authorities, so far nothing seems to be happening get them off the air.
--

If you hear this QRM, please report it to your nations Intruder Watch coordinator.
(Q-News)

**

RADIO LAW: COURT RULES CITY CANNOT RESTRICT BUSINESS ANTENNA USE

A California Court of Appeals has ruled that a city cannot regulate the type of transmissions that an FCC license holder can broadcast. It also says that a

city ordinance that prohibited a license holder from broadcasting commercially is preempted by federal law. Amateur Radio Newsline’s Bruce Tennant, K6PZW, says what the city of Rancho Palos Verdes was trying to write its own rules on this one:

--
Mark Abrams, WA6DPB, lives in Rancho Palos Verdes California. He is an amateur radio operator and with city approval, Abrams built a 40-foot antenna and 52-foot antenna in the backyard of his home. The city’s approval of the towers was contingent on their use being limited to non-commercial applications only. Abrams is also the owner of a business that sells and services two-way radio equipment and holds 76 licenses issued by the FCC which permitted the use of his antennas for commercial purposes.
--
Abrams: Audio Onlt at www.arnewsline.org.
--

Abrams says that he never used the two city-approved towers to receive or transmit on frequencies for commercial use. Instead, he used portable antennas mounted on tripods in his backyard and on a mobile tower trailer which he parked in his side yard.

But in 1998 and 1999, the City of Rancho Palos Verdes monitored radio transmissions from Abrams's property and detected the commercial use of frequencies. The City stated that these transmissions were in violation of an ordinance that required FCC licensees to obtain a conditional use permit from the city's planning commission to operate commercially.

--
Abrams: Audio only at www.arnewsline.org
--

The City of Rancho Palos Verdes and State of California filed an action seeking an injunction to bar Abrams from, among other things, operating his antennas for commercial purposes. Abrams answered the complaint and filed a cross-complaint of his own. It he claimed that federal law preempted the City's ordinance because it prohibited the use of frequencies allocated to him and his customers by the FCC.

--
Abrams: Audio only at www.arnewsline.org
--

The court says that he can use his antennas for commercial purposes without a city permit. It says that federal law preempts the City's ordinance banning such use because the Rancho Palos Verdes requirement that Abrams obtain a permit to transmit a commercial broadcast was preempted by federal regulation. It says that Abrams's FCC licenses enable him to operate commercially on certain frequencies and the City of Rancho Palos Verdes limitation on his rights are in conflict with federal law. And that’s good news for WA6DPB.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

The Court concluded the City does hold zoning authority, but such authority is limited to the placement, construction, and modification of facilities used for commercial mobile radio services only. (ARNewsline™)

**
RADIO RULES: UPDATE ON NTIA VS. PROPOSED 5 MHZ HAM BAND

Some good news concerning the National Telecommunications and Information Administration opposition to a new Amateur service allocation at 5 Mhz. This from ARRL President Jim Haynie, W5JBP, and General Counsel Chris Imlay, W3KD who say that they are now optimistic about reaching a resolution to issues that could otherwise block plans for the band.

The two met with representatives of the government agency to discuss the NTIA concerns. Haynie says that they came away with a feeling that the NTIA was willing to work with the ARRL to resolve concerns. Until surprise opposition surfaced the FCC appeared to have put ARRL's request for a new, domestic-only, secondary amateur allocation at 60 meters on the political fast track. (ARRL Bulletin)

**
RESCUE RADIO: HURRICANE ISADORE STRIKS

On Tuesday, September 24th, the FCC declared that a general communications emergency existed for Alabama, Florida, Louisiana, Mississippi, and Texas. This as hurricane Isadore approached the region.

The declaration requires amateurs not use 3.873 MHz during hours of darkness and 7.285 MHz during daylight. Both frequencies are to be protected plus or minus 3 kHz. Only amateurs taking part in the handling of emergency traffic are to use these 6 kilohertz slots.

The FCC said the communications emergency could last as long as 14 days but it actually remains in force until its rescinded. Keep an eye on the ARRL website newspages for ongoing updates on ham radio involvement in this emergency. Its in cyberspace at www.arl.org (From ARRL bulletin.)

HAM RADIO IN SPACE: V-U-SAT’S MESSAGES FROM ORBIT

A new ham radio satellite to be launched by India wants to carry your message. This, according to VU2NUD who is the coordinator for Amsat-India.

VU2NUD says that V-U-SAT will carry a beacon system with the ability to play back pre recorded messages on command. They will be transmitted in F-M voice

for all the world to hear and your words could be among those it broadcasts from space. Here's how:

Think of short, meaningful and apropos messages no longer than 15 seconds in duration. It could be related to ham radio space operations, amateur satellites, famous quotes, sayings or whatever. Then send it along to VU2SBJ by e- mail to sri@ebhats.com and a copy to ham@vsnl.com. Mark clearly in the subject: Message for Beacon. Then wait to see what V-U-SAT eventually has to say. (ANS)

**

ENFORCEMENT: FCC SETS ASIDE LICENSE RENEWAL

The FCC has notified Scott E. Kamm, of Sioux City Iowa that it has set aside the renewal of his Technician class license grant for N0UGN. The Commission said it took the action based on recent complaints about the operation of Kamm's station and questions regarding his qualifications to be a licensee.

The FCC notes a Warning Notice by the Enforcement Bureau sent to Kamm last February 5th. The agency says that the warning was related to Kamm's alleged use of transmitting equipment on 156.300 and 174.000 MHz without a license, and deliberate interference to an Amateur repeater operating on 146.910 MHz. The letter also pointed out that Kamm's address in the database was incorrect. And subsequent to that warning notice the FCC says that information came to its attention that Kamm had apparently provided radio equipment to an unlicensed minor residing in Waterbury, Nebraska, and had instructed him on how to operate on the Marine Band and other frequencies.

In his February 11th response to the FCC Warning Notice, Kamm denied setting up radio equipment for the minor, and also stated that he had sold all of his radio equipment. But the FCC says that it has all of these complaints under review and that Kamm will be hearing from the agency again in the not to distant future. (FCC)

**

SAFETY ALERT: FLUKE METER RECALL

Test equipment manufacturer Fluke Corporation has announced a voluntary recall of certain models of its digital multimeters. This because of a delay in readings on the A-C scale above 500 volts.

According to a company release, the meters can take more than 18 seconds to reach a final reading. This could lead users to think that the voltage is lower than it actually is.

The meters involved in the recall are models 175, 177 and 179 of which 17000 were sold in the United States. All of the recalled units have a serial number below 79000000 and were sold between January and October 2001. If you have one, please call Fluke toll-free at 800-260-4819 between 8 AM and 7 PM weekdays Eastern time. More information on the recall can be found in cyberspace at www.fluke.com/rma/default.asp. (Fluke press release forwarded by WA6ILQ)

**

SAFETY ALERT: KODAK DC5000 DIGI CAMERA RECALL

A recall on a popular digital camera. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the shocking details:

--
If you own a Kodak brand digital camera model D C 5000, listen up. Eastman Kodak Co. is recalling about 75,000 of these cameras because of a possible manufacturing defect that can cause electrical shock.

According to news reports, the recalled cameras bear the model number DC5000 on the lower front right-hand corner. The cameras also carry a plate on the bottom containing the Kodak product identifier code KJCAA, followed by an eight-digit serial number ranging from 01800001 to 11700825.

The cameras were sold at department, electronic, computer and camera stores as well as mail-order and Web sites from June 2000 through August 2002. Consumers can return the cameras for free inspection and repair by contacting the company at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time.
--

Again, if you own one of these cameras, please contact Kodak at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time. (Kodak press release)

HAM RADIO ON TV: ICOM JOINS “THE HUMAN RACE”

ICOM America has been named the high frequency communications provider for the television shoe The Human Race. ICOM America has already shipped an IC-706 Mark II G to Boston for use by the show. The IC-706 and additional equipment will be used during an upcoming trek along the actual travel route to be used. The donation is the result of an agreement recently reached between ICOM America's National Sales Manager Ray Novak, KC7JPA, and the shows producer Bill Desjardins, W1ZY. (THR)

RADIO HISTORY: PEARL HARBOR REPORTER S.K.

He wasn't a ham, but Hugh Lytle was a communicator in his own right. History remembers Lytle as the man whose teletype message provided The Associated Press and the world with the first account of Japan's sneak attack on Pearl Harbor back in 1941.

Lytle was the news services Honolulu correspondent and a reserve Army officer. He was awakened by the Army on December 7th as Japanese planes bombed the U.S. fleet. According to his son David, Lytle quickly left for his A-P office at the Honolulu Star-Bulletin, where he filed a brief account of the attack in progress. He then reported for military duty with the Army.

A few weeks ago on August 16th Hugh Lytle passed away. He was 100 years old. (Published reports)

HAM TRAVEL: FREE ACCOMMODATIONS FOR HAMS ON THE GO

>From across the Atlantic comes word of an interesting program for hams who like to move around. The International Travel Host Exchange, or I-T-H-E is a program administered by the German national society, D.A.R.C. It provides radio amateurs with the possibility of free accommodation with other amateurs around the world in exchange for other hams offering accommodation to overseas amateurs.

Most International Travel Host Exchange members are in Europe, but there are also amateurs registered in Australia, Canada, India, Indonesia, Japan, Malaysia, New Zealand, Syria, Thailand and the USA. Once registered, postal or e-mail addresses are made available so that contact can be established well before any visit takes place. For more information please contact Thilo Kootz, DL9KCE by e-mail to dl9kce@darc.de.

**

SCIENCE AND TECHNOLOGY: NEW GRAYLINE STUDY REMAILER

A new Internet newsgroup has been set up to discuss and coordinate the current research into greyline propagation by the RSGB Propagation Studies Committee. It is with Yahoo and people can subscribe by sending an empty e-mail to greyline-subscribe@yahoogroups.co.uk

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. ARNewsline is one word spelled a-r-n-e-w-s-l-i-n-e.

**

HAM RADIO IN SPACE: RS-12/13 - S.K.

The AMSAT News Service and the ARRL Letter both report that the Russian Radiosport RS-12/13 ham satellite appears to have died. Jerry Brown, K5OE, reports he's received word from Russian sources that RS-12/13 went dark as a result of severe solar flare activity in
July and August.

At airtime, efforts are under way to restore the satellite, but hopes for success are dim, according to Brown's Russian acquaintances. RS-12/13 were integrated into the COSMOS 2123 Russian navigation satellite, launched February 5, 1991. It’s beacons have not been heard since August 20. (ANS, ARRL Letter)

**

INTERNATIONAL - AUSTRALIA: CB RULES ARE CHANGING

The Australian UHF CB equipment standard is to change. The new standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. The A-C-A has also informed the Australian Association of Citizens Band Radio Operators that once the standards are approved by Standards Australia, they will become compulsory for equipment manufacturers. (Q-News)

DX

In D-X, word that KF2XN is active as KH2 slash KF2XN from Guam for at least the next month. He operates mostly SSB in his spare time. QSL as directed on the air. (RSGB)

And BI7DX is an Isands on the Air expedition that will operate from Weizhou Island throuhgh the 4th of October. Weizhou Island is located in the Gulf of Tongking in South China with team members comming from four different Chinese provences. The operation will be on SSB and CW from 40 to 10 meters, including the WARC bands. (RSGB)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, our favorite flying T-Hunt is about to start. This, as the famed radio tagged burrowing owls take flight once again. With the details, here’s Joe Moell, K0OV.

--
It's that time again -- migratory birds in the Northern Hemisphere are heading south for the winter. For the fifth year, ham radio operators and scanner fans are being asked to use their equipment to help wildlife biologists figure out the routes and final destinations of endangered Burrowing Owls. In previous

years, hams helped determine that owls hatching during summer months in the Canadian provinces of Saskatchewan and Alberta travel over central states from North Dakota to Oklahoma, ending up in southeast Texas and northern states of Mexico. They sometimes fly over 2000 miles to their winter homes.

There aren't any radio-tagged Canadian owls to listen for this fall, but the University of Arizona is asking for ham help with 53 transmittered owls from eastern Washington state. If you live in the western USA and can receive 150 MHz signals, you could help. Your scanner or extended-range hand-held ham radio transceiver, plus an outside antenna, are all you need to join in. If you have radio direction finding equipment for VHF, so much the better.

For all the frequencies and monitoring information, go to the usual place on the Web, www.homingin.com (HomingIn is one word.) If you aren't on the Web, send postal mail to my callbook address. Again, the Web site is homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

Once again, more information is in cyberspace at www.homingin.com. (ARNewsline™)

We have three "50Kw" stations in the Boston area - WEEI, WRKO, and the one that runs at 1510 (call letters change frequently) whose signals blanket Boston but have problems reaching some suburban areas.

WRKO, for instance, has a signal that really doesn't go far west. But if you are out in the ocean, no problem.

Here is the article from the St Louis Post dispatch:

Phoenix DJs harass Kile's widow and Benes

By Joe Strauss and
Rick Hummel
Of the Post-Dispatch
10/04/2002 05:42 AM

PHOENIX -- The Cardinals contacted Major League Baseball security Thursday morning after at least one player and the widow of pitcher Darryl Kile were harassed by a local radio station.

During its morning drive segment, FM station KUPD held an impromptu rally across the street from the team's north Phoenix hotel. Led by a pair of shock jocks, a group of people followed pitcher Andy Benes to a nearby coffee shop while chanting "Benes Sucks! Benes Sucks!" The rally continued while Benes and two friends remained inside the establishment. When the party emerged, a station employee put a cell phone to Benes' head in an attempt to get him to go on the air.

Benes suggested the station instead call Diamondbacks lefthander Randy Johnson, saying, "Why don't you wake up Randy and tell him he sucks? We beat him 12-2."

Hotel security tried to have the rally dispersed but were told by police the request had to come from an adjoining office complex being used as a staging ground.

While the rally continued, the radio personalities phoned the team hotel and were put through to the room of Flynn Kile and spoke to her on air. The interview ended when disc jockey Beau Duran asked Kile's widow if she needed a date to the game.

"People are entitled to do what they want to do but, in my opinion, this crossed the line," Benes said.

Benes and numerous players from both clubs were livid over the "prank" played on Flynn Kile.

"If you ask me, the guy who asked her that should lose his job," Cardinals reliever Dave Veres said.

"Whoever is responsible should suffer serious and dire consequences," said Cardinals manager Tony La Russa. "If we could get our hands on him ... I mean, that is so brutal, that something really significant should happen to him."

News of the phone call spread quickly through the team, which had enjoyed spending time with Flynn Kile since she and her three children had moved from St. Louis to suburban San Diego shortly after her husband's June 22 death. Kile's agent, Barry Axelrod, notified the club that Flynn was not prepared to grant interviews. However, the radio station's call went unchecked.

Chuck Artigue, a manager for the radio station, told the Arizona Republic that the prank "was in terribly bad taste" but that no action would be taken against the disc jockey, Duran.

Artigue said Duran told Flynn Kile in the broadcast phone call that "we saw you on TV the other night, and you're very attractive. You're hot. Are you going to the game today?"

Artigue said that Duran then asked, "Do you have a date?" After saying goodbye, Flynn Kile hung up.

Cardinals officials said they have left dealings with the radio station to the Diamondbacks, who insisted that they will continue to seek action.

Any audio editing software can be outfitted to work the same as any other. Pro Tools still works best on Mac with Digidesign interfaces. CEP works on just about any PC with just about any sound card. PT has tremndous snob appeal. CEP is innexpensive, which is important to consider if you are trying to get the GM to pay for it. PT beyond their Free program is still a little expensive, and you have to pop for some plug ins on top of that to get the same features as CEP.

Decide which one you like best, then spend the time learning all the tricks it can do. Personally I like CEP. So that's what I use.

2966. Partial ownership of AM. The Radio Crazy, oy vey, he is back!

Newsgroup: rec.radio.broadcasting
Date: 2002-10-05 19:28:01 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <anneg1$f2k$1@xuxa.iecc.com>
Source record: 9728

Partial ownership of AM for sale. Idaho. Small market. 1 KW, fulltime AM. On the air since the 60s. $60,000 full price. NO real estate included. Only station in community.

Joint venture thru the "Radio Crazy". Active or inactive investors with at least $10,000 are welcome. All investors would be on the board with full voting right, if desired. No single investor can hold over 49 percent of the stock. That goes for the "Radio Crazy" too!

This is a nice area not too far from the famous ski resort town of Jackson Hole, Wyoming.

The station can apparently upgrade to 50,000 watts, non-directional days. Lower power at night, of course. Still, one hell of an improvement from the present 1 KW fulltime.

PLEASE! No "AM bashers" or negative nabobs, etc. I don't need the aggravation. If you hate AM, why annoy me or the forum!

(478) 741-1710 in Macon, GA.

73,

Meyer Gottesman aka Moron Gottesman aka W6GIV, aka "Radio Crazy". (Crazy as a Fox, that is!)

Oh, for you detractors, my last job in radio (2001) was "only" Chief Engineer for a New York City AM. I guess they paid me $75,000 a year to be an idiot!

What's the problem?
I hear the lady is a real looker. Wouldn't any red-blooded hetero-man want
to "slip her the sausage?"
Let's face it, either she hasn't had any in quite a few months, or if she
has had some, & she's game!
No matter how you look at it, she's a single lady so it's worth a try.

Hell, life goes on so grab all you can!!

Due to the perceived weakness of AM little research on frequencies is done.
I assume many times the station that was being protected went to FM years
ago and the old AM is silent. (or will be) It happened to me I noticed that
a station we were protecting to the East had been off for years, my upper
management were unwilling even to look at unless we could get some audience.
Meanwhile half the CMA was not getting us. (didn't stay long)

I have the best directional FM antenna RS ever offered. I bought for about $30 for it in 1981. At the time, I lived near North Creek, NY in the Adirondacks. I bought it to get a FM station in Glens Falls. At the time, there were a few FM stations that were attainable without a good outside unit. I did place a line amp on the unit and mounted it on rotor on a 20 foot tower.

I was very surprised the extra stations I could recieve. It was rated at 200 miles, direct line of sight. But, I was surrounded by mountains in all directions and was not up very high. I don't know of the distance, but it allowed me to get stations (regularly) in New Paltz, Albany, Cobleskill, Utica, Watertown, Platzburg, and Syracuse, NY as well as Montreal, QC Kington, ON, Hartford, CT, Keene, NH, and Montpelier, VT. I really do want to get it back up to see what I get here in the Mount Washington Valley of NH. The reception here is really quite varied, selective, and lousy.

Sorry I can't help with the software, but those call letters sure brought back memories of my time in Champaign/Urbana. But then it was AM controlled carrier and was located in the "Parade Ground Units", hence the call letters. Never worked with them, but listened a lot.

Amateur Radio Newsline™ Report 1312 – October 4, 2002

Amateur Radio Newsline report number 1312 with a release date of Friday, October 4th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new world-wide threat to ham radio on 70 centimeters tops this weeks Amateur Radio Newsline report number 1312 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS: A WORLDWIDE CHALLENGE TO 70 CM

If you operate on 70 centimeters anyplace in the world, listen up. Your future access to that band is in peril. Q-News Graham Kemp, VK4BB, has the details on how a proposed satellite system could run hams off of the band:

--
It has come to the attention of the South African Radio League, SARL that the threat to the 70-cm band -- world wide -- is once again very real. The SARL has just received a discussion paper which will be tabled at the World Radio Conference next year -- WRC-03 -- which directly targets the portion of 432 to 438 MHz for exclusive use by the planned Earth Exploration Satellite Service or EESS, due to be launched soon.

If this proposal is carried at the World Radio Conference next year it, will see this portion of spectrum allocated on a worldwide basis and this spells the death knell of all 70-cm ham radio operation.

The section of the proposal and the motivation is as follows: Agenda Item 1.38: '...to consider provision of up to 6 MHz of frequency spectrum to the Earth exploration-satellite service active in the frequency band 420-470 MHz, in accordance with Resolution 727 that was revised at WRC-2000.
--

But why target the Amateur Radio allocation at 70 centimeters? The researchers who want it say its the only frequency that will work. Again, Q-News Graham Kemp, VK4BB:

--
According to the United Nations Conference on Environment and Development -- UNCED -- held in Rio de Janeiro in 1992, there is an urgent need for assessment and systematic observations of forest cover and rate of forest degradation in tropical and temperate regions. Active space borne sensors Synthetic Aperture Radars (SARs) are needed to enable the monitoring of forest biomass.

Systems operating on frequencies around 450 MHz can penetrate the canopy of forests, and have the capability to determine the ground-trunk interaction and are in the context of forest cover information of particular importance.

Systems operating at 1.3 GHz, or higher frequencies cannot penetrate the canopy. The spectrum around 450 MHz is also optimal for monitoring of continental ice and for monitoring of vegetation and soil surfaces for desert and tropical areas.
--

More on this story in future Amateur Radio Newsline reports. (Q-News, SARL, ARNewsline™)

**

HAM POLITICS: HAM-CONGRESSMAN APPOINTED TO KEY HOUSE SUBCOMMITTEE

Back here in the U-S-A the ARRL Letter reports that Oregon Republican Congressman Greg Walden, WB7OCE, has been appointed to fill a vacancy on the House Subcommittee on Telecommunications and the Internet. Walden is one of only two amateurs in the U-S House of Representatives, and his appointment to the key House panel dealing with communications matters is considered good news for the ham radio community. Walden's selection was announced by Republican House Energy and Commerce Committee Chairman Billy Tauzin of Louisiana. (ARRL)

**

RADIO LAW: CONGRESS MANDATES DIGITAL ANTI-PIRACY

Meantime, congressional lawmakers have ordered the Federal Communications Commission to mandate technology preventing digital TV signals from being hooked up to the Internet and made vulnerable to piracy. The directive is viewed as a major victory for Hollywood film makers and other copyright owners at a time when the music business is being ravaged by Internet piracy. (Published news reports)

**

RADIO LAW: FEDERAL COURT RULES IN RF BRAIN CANCER CASE

A Federal District Court has dismissed an RF related mobile telephone brain cancer suit. According to the C-G-C Communicator, the court ruled that the plaintiffs had not provided any reliable and relevant scientific evidence to prove their case. The complete finding can be found in cyberspace at http://www.mdd.uscourts.gov/Opinions152/Opinions/newman0902.pdf (CGC Communicator)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KA5GLX repeater serving Clear Lake Texas.

(5 sec pause here)

**

RESCUE RADIO: HAM RADIO READY FOR HURRICANE LILI

Following quickly in the wake of Hurricane Isidore, a Category 2 storm named Lili made its way across western Cuba and then took aim at the U-S Gulf Coast shoreline. Amateur Radio Newsline's Don Wilbanks, KC5MFA, has more from New Orleans:
--

According to an ARRL Bulletin, the Hurricane Watch Net and W4EHW at the National Hurricane Center in Miami are again gathering ground-level reports using ham radio for communications into and out of the affected areas.

The Hurricane Watch Net is currently activated on 14.325 MHz with traffic coming in from numerous stations. Meantime W4EHW continues to exchange meteorological data and Spanish advisories with Cuban amateurs. Many of the reports received via ham radio have proven to be valuable to forecasters at the National Hurricane Center.

Right now all eyes are on Lili as she makes her way toward the U-S mainland. On Wednesday October 2nd the FCC declared a communications emergency as Lili approached the Louisiana and Texas shoreline. As we go to air, all hams not directly involved in hurricane related emergency communications are required to avoid using 7.285 MHz daytime and 3.873 MHz from sundown to sun up. These frequencies are protected plus or minus 3 kHz. The FCC declaration will remain in effect until rescinded and could be in effect for as long as two weeks.

Monitoring the storm and ham radio traffic from one of Lili's probable targets near New Orleans, I'm Don Wilbanks, KC5MFA, reporting.
--

Official advisories on Lili and other tropical storms can be found at the National Hurricane Web site. Its in cyberspace at www.nhc.noaa.gov. Late breaking ham radio operational advisories are at www.arrl.org. (ARRL, others)

**

SPACE AND SCIENCE: HURRICANE LILI CAUSES SHUTTLE LAUNCH DELAY

And a potential threat from Hurricane Lili to the Mission Control Center at Johnson Space Center in Houston has forced a delay in the launch of the STS-112 shuttle mission. Atlantis and its six member crew are now slated to lift off no earlier than 1800 to 2200 GMT on Monday October 7th. Once on-orbit, Atlantis will deliver the S-1 Truss to the International Space Station. The crew will perform three spacewalks at the station and will transfer supplies and equipment between the two vehicles. (NASA)

**

RESCUE RADIO: VK HAMS THERE AS PHONES GO OUT

Amateur Radio has come to the rescue after the town of Bindoon in Western Australia was isolated by communications failure.

For reasons yet to be explained, the failure of the phone system on Sunday September 22nd was total. Both mobile and fixed services went dead. No calls were possible.

A ham radio knight in shining armor in the form of VK6HGM rode to the rescue. Actually he drove to a hilltop and used the Roleystone repeater on 146.700 MHz in the hills above the city of Perth to report the telephone outage. This of itself is quite a feat, as both Bindoon and Roleystone are in the Darling Mountain Range and are out of line-of-sight from one another.

Be that as it may, the call for assistance was answered by VK6AX. He had telephone service and used it to alert the authorities and brought about a happy end to the story. Within half an hour, all telephone services in Bindoon were back on line.

**

ENFORCEMENT: NET UNDER FCC SCRUTINY

Turning to news from the FCC, word that the agency is taking a close look at a 20 meter net and its control operator. The FCC's Daryl Duckworth, NN0W, explains:

--
"The Enforcement Bureau has opened an inquirey into the Mobile Emergency and County Hunters Net operating on 14.336 Mhz. We have requested that James Grandinetti, who uses the call signs KZ2P and K2JG to respond to seven complaints about the operation of the net. The Enforcement Bureau also requested documentation supporting the club call sign of K2JG which is assigned to the Atlantic Amateur Association."
--

The FCC's letter to Grandinetti alleges that he harassed certain operators and banned other hams from using 14.336 MHz while he was operating as a net control station. The letter told Grandinetti that the frequency 14.336 MHz is a shared amateur frequency. As such, the operation of a net on that frequency conveys no greater rights regarding its use by Grandinetti than any other licensed radio amateur. Grandinetti was given the customary 30 days to reply.

**

ENFORCEMENT: PRIVILEGES REINSTATED

And still in the enforcement arena, some good news for a Martinsville Virginia ham. Again, the FCC's Daryl Duckworth, N-N-Zero-W:
--
"We notified Theodore Crutchfield, K4TFC, that since he has taken and passed an Element 1 code test as requested, his license remains Extra class and that he is in good standing."
--

By way of background, back on December 20, 2001, the FCC had notified Crutchfield that it was requiring him to re-take Amateur Element 1 under the supervision of the W4VEC Volunteer Examination Coordinator. This, on or before February 15th of this year. Crutchfield appeared for the exam session but did

not pass. As a result, he was notified on July 16th that the Wireless Telecommunications Bureau would downgrade his license from Extra to Technician Class. A few days later on July 21st, Crutchfield successfully completed an Element I examination in Roanoke, Virginia. Now, as Daryl Duckworth put it, Crutchfield remains Extra Class and his license is in good standing with the FCC.

**

RADIO ACCIDENTS: HAM INJURED IN TOWER ACCIDENT

A Michigan ham has been seriously hurt in a tower fall. According to an Internet report from Allen Stap, N8OKU , the accident involved the removal of a 160 foot tower.

Stap says that the top 120 feet was removed without incident. Daylight ran out so removal of the remaining 40 feet was deferred to the following morning. On inspection, the last 40 feet appeared to be safe and the removal work began. But the base of the tower broke apart and the tower fell with the ham on board. It landed on a polebarn with the ham crushed between the tower and the roof.

The accident happened near the town of Lawton. The ham involved was not identified by full name or call sign but was described as a long time and experienced tower climber. His injuries included a broken jaw, two broken arms and a broken leg. The good news is that he is expected to make a full recovery after extensive rehabilitation.

**

RADIO ACCIDENTS: NEBRASKA TOWER COLLAPSE KILLS TWO

And a 1,965-foot television tower collapsed Tuesday September 24th in a western Nebraska field. Two workers were killed and three others were injured.

The tower was located near the town of Hemingford. A spokesman for its owner, Duhamel Broadcasting Enterprises of Rapid City, South Dakota, said two of the workers were repairing the roof of the near-by transmission building. The others were strengthening the tower so it could be equipped with high-definition television antennas.

The structure was built in the late 1960’s and was used to transmit the signal for Scottsbluff television station KDUH throughout most of the states panhandle area. It and was the tallest structure in Nebraska, and was some 500 feet taller than the Sears Tower in Chicago and 700 feet higher than the Empire State Building in New York. The cause of its collapse is not yet known. (K0NEB)

**

OPERATING EVENTS: ARRL DEVELOPING JOTA DATABASE

Jean Wolfgang, WB3IOS, of the ARRL Field and Educational Services Department writes to say that the League has set up a first ever scouting Jamboree On The Air event database. It comes as the result of requests to Jean from scouting

groups looking for hams who plan to offer their services to the event. You can register your JOTA event by taking your browser to the rather complex U-R-L you will find on the web at http://www.arrl.org/FandES/ead/jota.html. T his years Jamboree On The Air takes place October 19th and 20th, local time. (ARRL)

**

OPERATING EVENTS: SHIPS ON THE AIR

The USS Cassin Young, a museum ship in Boston on a turn around cruise will operate an Amateur Radio station from her radio room during the voyage on Saturday, October 12th. Operators will pass commemorative US Naval style messages between that ship and the USS Salem. The Salem is another museum ship berthed in Quincy Massachusetts. Operation will be on 20 and 40 meters. For a commemorative certificate send an SASE and a copy of the message you hear to Bob Callahan, W1QWT, 56 Acorn Street, Scituate, Massachusetts 02166. And less we forget, of the two ships involved the USS Cassin Young is a Destroyer and the USS Salem is a heavy cruiser. (W1QWT)

EMERGING TECHNOLOGY: THE SCIENCE REPORT

Two interesting items from this weeks science page. Here are Jim Damron, N8TMW and Jeff Clark, K8JAC.

--
EMERGING TECHNOLOGY: TECHNO-JUNK PILING UP

A new study called Waste in the Wireless World: The Challenge of Cell Phones says that 130 million wireless devices will be discarded annually in the United States. This equals 65,000 tons of two-way radio garbage.

The study makes several recommendations regarding both the design of cell phones and the disposal of them. It says that the use of toxic substances in them be reduced. It also suggests that device standardization be implemented so users are not forced to purchase new phones when they change service providers or for travel. Finally, the study says that cellular telephones should be

designed for disassembly, reuse and recycling.

It should be noted that the study was limited to cellular phones and other two way radio devices. It does not include the tons of VCR’s and TV sets that are disposed of each year. (Supplied by several ARNewsline(tm) listeners)

**

EMERGING TECHNOLOGY: BARCODES CAN SAVE LIVES

You know those bar codes that grocery workers scan to let you know how much your cereal costs? Well, hospitals are now using the same technology to help save lives, thanks to a computerized medication system. A nurse scans the bar code on a patient's I-D bracelet, along with a bar code found on the medication itself before administering the drug. This enables the computer to verifies and checks the bar codes to make sure the patient is getting the correct medication. A green signal tells the nurse it's okay to precede. An error warning, and red signal, alerts the nurse if something's not right.

To date, only about two percent of the nation's medical facilities use bar code technology to verify medication administration, but that number is expected to rise. Statistics show the system prevents anywhere from 84 to 264 potential errors a week at one hospital alone. (Science Today)
--

More emerging technology news, next week.

**

SPACE AND SCIENCE: JAPAN DELAY COMPLETION OF ISS MODULE

Completion of the international space station hit another snag. This as Japan's cash-strapped space program announces that it would delay launch of the bus-sized research module it is building for the project.

The research capsule called Kibo is the only part of the space station developed and run by an Asian country. It was scheduled for launch sometime in 2004. Liftoff of that module is now planned for April 2005 at the earliest. (Published reports)

**

INTERNATIONAL - GERMANY: DDH47 CELEBRATES 50 YEARS OF SERVICE
November 8th and 9th will see a special station on the air from Pinneberg Germany. This as Weather Service's station DDH47 will be operating crossband on 147 kHz and listening on 80, 40 and 20 meters CW to celebrate its 50th anniversary of the service. Slow speed Morse transmissions to North America are also planned. (G4NJH)

**

INTERNATIONAL: FIRST UK TO VE CONTACT

Sunday, September 22nd marked the 84th anniversary of the first radio message from the United Kingdom being received in Australia. On the 22nd of September

1918, a message of goodwill was sent in Morse code from the Marconi station located near Caernarfon. The callsign was M-U-U, and the 200-kilowatt transmitter was on 21 kHz, a wavelength of 14,300 meters. The signal was received at
Wahroonga near Sydney by Sir Ernest Fisk, an Englishman who had served under Marconi in England. The message of goodwill was published the following day on the front pages of the Australian morning newspapers. (GB2RS)

**

DX

In DX, word of the first 6 Meter contact from Afghanistan. Nick Peckett, G4KUX, writes that he made what he says is the first-ever contact on 6 metes from Kabul at 15:15 UTC on Tuesday
the 24th of September. Peckett, operating as YA4F, contacted YF1OO in Indonesia. G4KUX says that he hopes to be able to give many others their first opportunity to contact Afghanistan on 6 meters over the next few weeks. (GB2RS)

And lower in frequency, TM4ENN is a special event station in France to commemorate the 60th anniversary of the creation of the 'Normandy Niemen' air flotilla by General de Gaulle. It will be active on 40, 20, 15 and 10 meters internationally. QSL direct with an stamped and self addressed envelope to F6BZH, or via the bureau. (GB2RS)

**

THAT FINAL ITEM: BY-BY BETAMAX

And finally this week, a legend is being put to rest. After twenty-seven years in production Sony Corporation says that it will finally put its famed Betamax tape format to bed forever. Our producer Bill Pasternak, WA6ITF, takes a nostalgic look back:

--
Its said that Betamax opened the world of home video as the first practical consumer format. Sony, J-V-C and Panasonic first tried with the famed 3/4 inch U-Matic machines, but consumers were reluctant to buy a videotape machine that was bigger than most T-V sets of that era and looked more at home in a television station than their livingroom.

My own first home VCR was a Sony SL-7200 Betamax. It would record a whole hour of pretty high quality video and audio on a tape cassette that was only 3 1/2 by 6 inches in size. I paid almost $2000 for the machine and each cassette cost me close to $25. That was in the late 1970’s and despite loosing the 1980’s video format war to VHS, Betamax held on as a niche product all these years.

Now, according to Larry Bloomfield’s Tech Notes news service, Betamax for consumer use is being phased out. This is because of the new consumer digital tape formats like Mini D V that are literally delivering a death blow to Betamax’ future prospects.

Sony reportedly will manufacture only 2,000 more Betamax machines before discontinuing the product altogether. But Beta will live on in the world of television journalism. Thats where a spinoff tape format called Betacam with suffixes like S-X and S-P became the defacto news gathering videotape of choice and have remained so for the past decade and a half.

With an SL 7200 Betamax still sitting someplace out in the garage -- gathering dust -- I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

And you thought that the Betamax died a quiet death many years ago!

You must be a real hit at a singles bar. Has it yet occurred to you
that she might have loved her husband and isn't ready to replace him?
When you finally grow up you'll realize that a relationship is much
more than the use of one's personal meat products. The "red-blooded
hetero-men" I know have more feelings for someone so badly hurt by the
loss of a partner that they'd try to do more to help than hurt her
even more.

Either you're too young to know the real value of your private parts
or your head hurts and has been damaged from being slapped in the face
so often. You remind me of the woman's travelling companion in the
Expedia TV ad.

I'd say you're an insensitive boor, but I'd probably just be repeating
what you're used to hearing.

Rich

Radio Guide is no longer publishing the classified ads in print.

All ads will be placed on: www.radio-classifieds.com

You can enter your ads whenever you like and make changes
on-line at any time. You can have the system email you when
equipment, matching user-specified keywords, has been posted.

All postings to this website are at no charge. We only ask that
you keep your entries limited to radio broadcasting equipment
and services. Non-radio entries will be removed immediately.

If you have any questions, please call 928-284-3700.

Thanks . . .

[Please forgive the commercial aspect of this post,
but we need to find someone before the 1st of the year.]

The Radio Guide (formerly Radio Shopper) publication is looking
for an experienced individual, to become our exclusive display ad
salesperson.

This person must have an extensive background in radio broadcast
equipment and technology. We would prefer a person with prior
experience in radio engineering and radio equipment sales.

This person must also have display advertising sales experience,
and must be able to come "on line" immediately. We are planning
extensive changes to the publication, and we need someone who
will become an integral part in the planning and execution of those
changes.

If any of you know of someone who may be interested in this
position, please have them contact us.

Please call me directly at 928-284-3700 (no e-mails please)

Thanks --> Ray Topp [publisher]

I heard on the news this morning that the Opie and Anthony rule extends to
Arizona. That much bad PR means the jock gets fired, which he did. The
unfortunate element is that somone somewhere will hire him for more than
what he was making because he "generates word of mouth".

July 9, 2002

To whom it may concern,

My name is David Best and I hold a diploma in Recording Engineering from Fanshawe College and I am currently seeking employment in the audio industry. My main interest is in doing postproduction work.

My goal is to secure an entry-level position with your production studio in order to further my skills as a professional in the music industry. As an employee I can offer my school training as an audio engineer and the real world experience I have gained working as an independent producer and composer. Working independently I have begun to develop my audio editing skills, and more importantly gained the motivation to make a bigger investment in those skills. I believe that my training and my strong desire and ability to learn more will make me an asset to your studio.
Any opportunities that you have either part or full time would be of great interest to me.

Sincerely,

David Best
Enclosure (1)

Skills

- Experienced recording engineer and audio, video, and broadcast system technician
- Knowledgeable technician for multi-language computer systems
- Ability to successfully troubleshoot and repair complex technical systems
- Ability to quickly adapt to new software applications

Education

2000: Recipient of diploma in Recording Engineering and Music Production from Fanshawe College.

September 2001-May 2001: Completed one year of studies in Electrical Engineering at Ryerson University

Related Work Experience

September 2001- Current: Independent - Music Producer / Editor and Musician
• Recording / Production / Editing for solo artists, dancers, religious ceremonies
• Live performance as drummer for dancers
• Music production for art installations
• Assembly of portfolio demos
• Kids / seniors / special needs music workshops

January 2001 • June 2001: Inscriber Technology - Quality Assurance and Testing
• Tested various broadcast software application such as VMP, E-clips, and Title Motion
• Maintained WinNt / Win98 workstations with various audio/video, broadcasting, networking and office related Hardware in a wide variety of foreign languages.
• Worked closely with developers on audio related issues
• Head tester for Discreet Logic related products
• Extensive use of Discreet Logic Edit* and Adobe Premiere

May 2000-January 2001: Sonomax Inc.- Acoustic Research Assistant
• Testing of hearing protection and enhancement devices
• Troubleshooting testing procedures and environments
• Tool design and fabrication

Interests and Activities

• Perform with Toronto Gamelan.
• Currently study African djembe and Middle Eastern percussion
• Avid yoga and meditation practitioner
• Interest in alternative and ecologically sustainable living environments and building design

As a general rule, DJs and talkshow hosts who are fired due to
controversy are almost guaranteed offers from other stations
immediately. Anyone who takes solace from a show host being fired after
doing something he considers in bad taste or worse should realize that
such a dismissal is usually tantamount to a promotion.

It's pretty damned hard for a shock jock to get fired, but when one
does, I think most of them have difficulty picking up from where they
left off.

The classic example that comes to mind is Doug Tracht (AKA "The
Greaseman"). Within the last year or so, his presence while
sponsoring events in Frederick, MD caused other sponsors to pull out.
He's living proof that if you say something toxic enough, you won't
get much more than a third rate show on some poor coverage MW AM
station. I wouldn't bet much on Opie and Anthony's future either.

I'd be interested if anyone can cite cases to the contrary. The only
one I can think of was Howard Stern. His reputed mis-step in DC ("How
much for a ticket to the 14th street bridge?"), though shocking, was
hardly the degree of insult that was perpetrated by the previous two
examples.

Any others?

2993. Why does an IBOC signal interfere with FM stereo?

Newsgroup: rec.radio.broadcasting
Date: 2002-10-09 14:54:18 UTC
From: fredhanson@att.net
Message-ID: <ao1fuq$ac9$1@xuxa.iecc.com>
Source record: 9554

My local NPR station, WETA-FM in the Wash., DC area, has been testing the IBOC system of iBiquity. I find that when I listen to the station there
is a 'hiss' when listening in stereo, but not in mono. The station engineer helped show this was due to the IBOC signal by turning it off and on, and
the hiss dispappeared when off.

I want to find out if this is a frequent effect of IBOC transmission. I have a new Onkyo TX-8511 receiver. The station is only 10 miles away, and it
is the most powerful one in the area. I had a Yamaha receiver, and the hiss did not appear on it. So, is my receiver mistuned (Onkyo said that the
tuner can be tweaked to a narrower bandwidth, but this would probably reduce the dynamic range of the sound, wouldn't it?), or is this a more
general effect of IBOC, and appears with some receivers but not others?

I read in today's Washinton Post
http://www.washingtonpost.com/wp-dyn/articles/A63499-2002Oct9.html that the FCC is going to rule tomorrow
on permitting IBOC broadcasting. It may be too late for the individual to have his/her voice heard, but I'd like to resolve this issue for my listening.

TIA.

The Greaseman did not commit an offense against taste, but against race.
That is obviously held in a different light.

O&A, the Phx guy, Big Boy in LA, all have done tasteless things lately. All
were either fired or admonished. All will work again.

Howard was not fired for that, per his PD. Again, tasteless only.

I know of several jocks fired for questions of taste... wasn't Bubba one of
them? And all got gigs elsewhere quickly.

It wasn't shocking to me. In fact when I heard of it I thought it
was a good joke, against all the fake concern but really voyeuristic
entertainment value plane crashes generate. A classic. It offended
exactly the right people, the ``news'' media and its ``caring'' audience.

I don't listen to Stern though, evidently for a different demographic
than mine. Stern's even on locally and Imus is a difficult DX catch,
which I work at instead.

I don't think the call to the widow matters either, it's just something
people enjoy getting offended by. Both the call and the reaction are
aimed at a different demographic. You'd have to be careful about
the widow thing: is she economizing her widowhood, playing it for
what she can get for it? That's the sort of thing to consider
before deciding to take a poke at her. I don't know one way or
the other. I haven't heard anybody consider it. There's a morality
of practical jokes, which the people who are offended at least are
ignoring; and perhaps the offenders were too, I don't know.

I don't think people realize what entertainment is; one thing that
entertains is tragedy - millions tune in to watch and you can sell
them stuff. And the prospect of being outraged is an attraction,
another entertainment, for the bluenoses. Geez, people writing letters
to a radio station.

Flip the damn thing off, is my advice. Be a nonparticipant.

But then I like bluenoses being offended myself. They
have it coming. So I listen to John and Ken, and Imus, hoping for the
best every day. At the moment John and Ken are getting death threats
from the longshoremen's union and doing a fine job of generating calls
from outraged trailer-park dwellers. Imus isn't doing much of anything
but the odd poke at a news personality.

All of the ones I know of in the SF area certainly did.

That said, there are egregious acts that can damage a career, e.g.
racial, ethnic, and (in the Bay Area) homo slurs. Furthermore, anything
that damages revenue is also very serious.

The afternoon jock on a local station quipped, in response to a
kidnapping in which the victim got away, that HE would have used nylon
rope and/or duct tape and mentioned that these items could be obtained
in abundance at Orchard Supply, a local hardware chain. Orchard Supply
pulled its spots on the station in short order, and the DJ got a very
serious reprimand. The issue was revenue rather than taste.

That was going to be one of my examples. Also, Perry Stone went from San Jose to San Francisco (same market, more pay) after making lewd comments about Girl Scouts who were in the studio.

Hmm...I don't see analog stereo AM as being offered on AM-hybrid
operation. In other words, I don't think it is even supposed to work.

My guess would be the stereo operation of the hybrid station. The stereo
signal depends upon phase modulation of the transmitter and so does the
IBOC signal. The opportunity for interaction is certainly there.

And as I said, none of the models in my big notebook from the
Harris/iBiquity dog and pony show indicate stereo analog operation.

3000. Question about external FM antennas

Newsgroup: rec.radio.broadcasting
Date: 2002-10-10 15:24:38 UTC
From: Blue Cat <kreamer@954access.net>
Message-ID: <ao463m$b5e$1@xuxa.iecc.com>
Source record: 9564

Like the person near North Creek, NY, I too had an external FM radio antenna, when I lived at Troy, NY during the 1970s. Then, the area only had a handful of local FM stations, and I could pull in very many within a 100 mile radius, and with acceptable quality. Stations beyond 100 miles would come in sporadically. Only during Skip conditions did I receive stations beyond 200 miles.

As the number of local FM stations increased in Troy, the usefulness of the antenna declined. Strong signals would overload the FM receiver, decreasing its sensitivity.

For sale:

Partial ownership of fulltime AM in Idaho. The "Radio
Crazy: is back. (Crazy as the Fox, that is!)

1 KW, small market. Cheap.

Joint venture (Does this venture send you to the
joint!! Nope!) grin!

Active or inactive investors with $10,000 or more are
welcome. No investor can own more than 49 percent.
This includes me!

All investors would be on the board with full voting
rights if desired.

This station can upgrade to 50,000 watts days,
nondirectional!

FCC just approved IBOC digital AM during the daytime!
Be advised.

(478) 741-1710 in Macon, GA.

Please! No "AM bashers" or other "negative nabobs"!!!

If you can't stand AM, please go elsewhere and "flame"
somebody else!

73,

Meyer Gottesman, W6GIV aka "The Radio Crazy"

It's my understanding that this signal is sent on a subcarrier of either an AM or FM station. I have been told that the AM quality is good and static free, but is very hard to recieve at night if there is much skywave interference. I've also read that some people have noticed a slight hiss in the analog audio of FM stations that are running tests of the Ibiquity digital radio system.

I fear we're going to see another standoff between stations and radio manufacturers over who should adopt the system first. If the radios aren't on the market, there's little incentive to start transmitting a digital program. If there are few stations broadcasting in digital, there's little incentive to sell the radios.

No, the bit-rate compression on AM will be more drastic than on FM.

> I assume AM may now have an advantage as the signal goes further.

No, in most cases, since the digital will be less powerful and also occupy
half of each first adjacent channel. The industry study group recommended
that AM digital NOT be used at night because of the interference it creates
to the first-adjacents. Most full-power FM stations cover farther than most
AM stations - except the Chicago AM powerhouses and a few others.

> How is it done, I assume the regular modulation is
> left alone and a MP3 type signal is encoded.

No, the regular analog modulation will have its high frequencies attentuated
to help allow space for the digital signal. AFAIK, the digitization is
considerably different from MP3.

> How is this done? I went to
> their site but it didn't tell me very much . Is it another modulation on
> the carrier?

In most cases I'd expect a separate digital transmitter multiplexed onto the
station's antenna system. Most/many AM transmitters are not wideband enough
to handle the digital as well as analog modulation.

FM digital apparently sounds at least as good as analog FM, and won't bother
other local stations, in most cases, because of the existing FM allocation
scheme. [Except in cases like Baltimore/Washington with a number of
first-adjacent allocations.] FM digital receivers will revert to using the
analog signal in poor-reception areas.

As the FCC said, "a win, win situation" [my comment - same content, more
interference, higher cost, revert to analog when the going gets rough].

This does not put AM audio quality on an equal footing with FM. Not by a long shot. In hybrid mode (both digital and analog signals being transmitted), the bit rate is very limited: 36kbps max. For any data the broadcaster wants to send (for displays or whatever) over the minimum 40 bits-per-frame (400bps) is taken right out of that bandwidth. No mp3 coding here; this needs the big guns, which means specialized low-bit-rate coding of the type used in satellite radio.

FM IBOC (in hybrid mode) has 96kbps available for its digital audio. That's 32kbps MORE than satellite radio uses per program.

On AM, the digital stream is sent as amplitude and phase components outside the audio spectrum. Most AM transmitters are capable of this, since it is the same technique used for AM stereo. Same thing on FM, essentially. FM is trickier because traditional FM transmitters are incapable of rendering a controlled amplitude component in the RF. This necessitates either a new transmitter that operates in Class A, or an adjunct transmitter that is combined with the analog transmitter.

In any event, even in the IBOC world, FM will still hold considerable quality advantages over AM.

Ray:

The other post I made to your message contained test results on the WTOP and the Ibiquity test transmitter in Ohio. Primarily, this report was trying to show the effectiveness of the all digital mode versus the hybrid mode which I assume will be the mode adopted by US broadcasters, at least at first. It's interesting but not that informative about the system.

The report: http://www.nab.org/scitech/amibocevaluationreport04062002.pdf

This is a far more comprehensive report than my earlier post. It will take you deep into the details but is 61 pages of pdf.

I'm not sure this is really completely up to date. Ibiquity has been experimenting with the digital compression algorithm they will finally use in the adopted product.

I think they have settled in on a variation of the Lucent PAC algorithm but I'm not sure. MPEG was dismissed a long time ago, as far as I know.

Ibiquity has really worked long and hard to get an analog signal and a digital signal to all fit in the NRSC RF Mask. It's going to be interesting to see how well this works with all the variables possible in the AM band, especially as it relates to interference.

If you have a stake in AM radio this is very worthwhile information.

Best, Phil

Certainly not, if audio fidelity is the issue. The AM IBOC demo I
heard at last year's NAB was unbelievably awful. Sounded little
better than RealAudio on a 28.8 modem. I would rate it as
unlistenable.

Ray: The AM IBOC signal digital signature is a very complex issue.
There is a series of digital carriers 12 dB down spaced out in the
sideband area of the signal. Take a look at the pdf file:

http://www.nab.org/scitech/AM_All_Digital_Report.pdf

This is fairly comprehensive and should explain it in some technical
detail.

Well, considering that the rate available on hybrid AM IBOC isn't much
better than what a dialup modem can deliver (actually it is much worse
if you compare it to a 56K dialup), it isn't surprising that artifacts
abound. I heard the demo at the Harris/iBiquity forum recently, and
frankly, I prefer a well-engineered AM analog signal.

I look at these low-bit-rate codecs as fascinating curiosities, but for
real, extended listening, what they produce is like fingernails on a
chalkboard. Maybe the public in general won't see (hear) it that way,
but I doubt it.

One other problem: AMs these days are shoestring operations. Only the
corporate-owned, major market stations will be able to afford the
equipment and licensing necessary for IBOC. This looks like more of a
loser than AM stereo, IMHO.

The biggest sticking point right now is nighttime operation. There have
been no real nighttime tests and you can bet that extensive testing will
be required to determine all of the possible effects skywave propagation
will introduce.

Also, I believe that neither hybrid nor full digital operation will fit
into the current NRSC mask and ultimately there will need to be a change
in the rules, just like on FM.

It is a proprietary coding for which the radio station will have to pay
licensing fees based on its revenue.

> In most cases I'd expect a separate digital transmitter multiplexed onto the
> station's antenna system. Most/many AM transmitters are not wideband enough
> to handle the digital as well as analog modulation.

Actually, most modern transmitters are capable. Any transmitter with
sufficiently high bandwidth and low IQM to do stereo can do IBOC.

> FM digital apparently sounds at least as good as analog FM, and won't bother

The FM mask will have to be changed to make IBOC stations compliant with
occupied bandwidth. This is part of what the FCC is considering at this
moment.

> As the FCC said, "a win, win situation" [my comment - same content, more
> interference, higher cost, revert to analog when the going gets rough].

The "revert to analog" feature will no longer work once we move beyond
hybrid operation and go "full digital".

Partial ownership of fulltime 1 KW AM for sale. Small
market in Idaho.

The "Radio Crazy" is back!

Joint venture. (You venture in, you go to the joint!
Just teasing! HI!)

Active or inactive investors with at least $10,000
each are welcome. You must be US citizen with no
felony convictions ro drug-based criminal convictions.
(FCC policy).

All investors would be on the board with full voting
rights if desired. No investor can own more than 49
percent and that rule applies to me!

Total consideration only $60,000. No real estate is
included.

(478) 741-1710 in Macon, Georgia.

Thank You! It's the same smoke and mirrors that cell phone companies used...If it's digital, it's gotta be good. Never mind that the audio actually sucks no matter how strong the signal is...It's digital. Total BS!

>From the demos I've heard, IBOC has the same, if not worse, "underwater" sound as RA does on a dial-up connection.

Plus, at least on AM, it makes the (already) limited analog audio even worse with a sharp 5khz cutoff and loss of CQUAM. I could be wrong, but isn't that roughly the response of the 'ol AT&T True Voice telephone lines?

Just my 2 cents.

In these economic times, stations are not inclined to tell a major local advertiser that its considerable ad budget is not welcome business, particularly when the basis is as flimsy as this.

Consider too, that this "demo" was a carefully controlled test. Now, the
real world, throw in sloppy board operators/DJ's then add in heavy
processing and program directors who want to "tweak" the sound. For the
first time too, an AM signal will be subject to multipath, receivers will
"blend" to an inferior analog signal. Now how does it sound?

This discussion over IBOC brings back memories of the debate over AM Stereo. It seems the only positive in the IBOC case is that we have one standard everyone is dealing with.

That said, what do you all think would have happened to AM radio if the FCC had set a stereo standard in the late 70's or very early 80's? (and stayed with it - unlike the revocation of the Magnavox standard)

My thinking is that AM radio would have stayed in the music business for a lot longer period of time than it did. I think AM stereo radios would have been common and popular and FM stations would have taken many more years to gain the dominant position they did.

An even better "what if" question: what if the FCC had allowed AT&T (I think it was AT&T) to go ahead with their AM stereo system in the early 60's? At the time, the FCC banned AM stations from broadcasting in stereo due to their dominant position over FM.

Oh yeah, a final question, whatever happened to Leonard Kahn?

Very few of us have heard AM IBOC/IBAC in a real-world situation.

iBiquity seems to have gone out of their way to prevent any independant 3rd
party evluation of their system(s).

Interesting story today about the risk of birds running into transmitter towers, both commercial broadcasters and things like cell towers. Article expresses concern over the growing number of the towers and what it might mean for bird populations, especially migratory ones.

excerpt:
Though conservationists identified the problem some 50 years ago, it has been only spottily documented around the nation, including in Eau Clare, Wis.

A 1,000-foot TV tower there set the national record for the most birds killed on any one night.

Stopping by the tower early one morning after a foggy fall night in 1957, Charles Kemper found 12,000 dead birds.

"In one night," said Kemper, now 82. "We actually picked up and counted them by hand.'' There were sparrows and red-eyed vireo, ovenbirds and Tennessee warblers, among dozens of other species.

For about 50 years, Kemper has documented the finding of dead birds, including 4,600 on a fall morning in 1964. All told, this now retired physician from Chippewa Falls has tallied more than 120,000 dead birds near the tower. Broken, bloody carcasses were found in grass, on rooftops and on the streets within a one-block radius.

There have been shocking numbers of dead birds at other sites around the nation as well. As many as 10,000 Lapland longspurs were found dead one snowy night in Kansas in 1998, after they hit a 410-foot TV tower.

Rest of the story:
http://www.twincities.com/mld/twincities/news/local/4265712.htm

My question: if birds are clumsy enough to whack into a tower, is it not also likely they regularly bonk their tiny brains out on tree branches, cliffs, rock formations and other obstacles occuring in nature? Given the size of the sky compared to the amount of space occupied by a metal tower and guy wires, it seems the birds still have the advantage, despite having...well, birdbrains.

Stella (gotta think of a snappier sig. line here) Starr

I have always been appalled at the advertising for digital cellphone service. And the service that emphasizes audio quality the most, Sprint, is actually the worst. In my newsroom we regularly have to ask people to call us back from a land line because their digital cellphone quality is too poor to put on the air. That means we wind up blowing off some interviews entirely. Too bad, but bad sound is worse than no sound.

OTOH, I still have my old analog Motorola 3-watt bag phone on AT&T Wireless, and it sounds almost as good as a land line. Some people can't tell the difference. I will keep that phone until it dies or AT&T turns off the analog service (which they say they will do 5 years from now).

Correct. This emperor is naked. If AM IBOC is not killed off, it could kill off AM broadcasting. AM IBOC would be the greatest step backward in the history of a medium that has already been repeatedly and purposely degraded by government regulators.

It's my understanding that Sprint is a PCS service. The early reading I did on PCS indicated it was intended as a very short range service requiring many more sites than the "standard" A and B cell providers.

The B provider is always Ma Bell or the local telephone company, The A provider was a competing provider like, in the early days, Cellular One. AT&T is usually the A provider. I understand that AT&T simply cobbled the smaller cellular companies together to form a single promotable network. Cellular one was just a common name given to independent companies to make them appear larger than they were.

I do a lot of camping far from civilization. Not one of the PCS providers reaches me anywhere I camp. Both Verizon and AT&T do. Most of the time in digital mode.

It would be interesting to ask your callers which service they use. I'll bet the noisier ones will be PCS if they're not close to a site.

The loss of C-Quam wouldn't cause me to lose any sleep. The 5kHz limit reminds me of the early C-Quam days where some Motorola engineer actually suggested in a filing with the FCC that AM be limited to 5kHz because of C-Quam. If you check the FCC archives you'll find a submission making that suggestion. Everyone thought he was crazy. There was also a problem with transmitters over 5kw and early C-Quam.

This all may be a moot point in that very few receivers even reach 5kHz. I recall being with an engineer friend who used a spectrum analyzer to monitor the competition. Very few New York FM stations (WPIX-FM, WQXR, WNYC and WNCN being exceptions) went beyond 10kHz.

There was a major loudness was at the time and those pesky high frequencies made loudness difficult to achieve.

While I realize most listeners aren't listening for fidelity I worry that AM and FM will gradually begin to sound noticeably inferior to the average consumer. I'm an early adopter, so not only do I pay top dollar but notice slight nuances in audio. When the multi-channel DVD-Audio, SACD, DVD and HDTV with 5:1 surround become more common, even the average listener will hear something sounds different.

My current CDs sound a little flat compared to my DVD-Audio disks (primarily because of the surround audio, not higher fidelity). I think the bar is being raised for the average consumer. I was hoping that AM IBOC would cause the quality of receivers to improve. What I'm afraid will happen is that IBOC will draw attention to itself at sunrise and sunset when the differences will be very obvious.

My Question is: do they hit the actual tower or the hard visible guy
wires.

I have an over 1000 feet (375 meter) FM/TV tower some 7 miles from here. Despite of the fact that this country (Holland, Europe) is loaded with environmentalists I have never heard of this problem. A pro animal movement member even kiled a right wing politcian, to indicate how fanatic they are.

I wonder about that, too (though not a lot). I used to ski at Snowbird
in Utah. The lift's highest point was either 8, 000 or 11,000 ft. I
don't remember which. In any case, those mountains are much higher
than any broadcast tower I've ever seen (excluding towers on 11,000 ft
mountains).

I expect the next suggestion will be to level the Rockies and get rid
of the Sears and Hancock towers along with the Empire State Building.
Suggestion #2 will be to ban Windex because birds crash into clean
windows.

American Indian thinking. Towers offend the sky.

You can't own the sky, you can't own land, you can't own a horse, you can't own
a dog, and you can't own a waterfall. A you can only own a casino.

Bizzarre.

I've never seen a dead bird near a tower, and I've had occasion to make a
lot of visits to towers over the past quarter century.

There must be something else going on, something about the particular towers
mentioned in the article that makes them unusually hazardous. I wonder why
there should be thousands of dead birds near a particular tower and *none at
all* near any tower in my part of the world.

The birds do have the advantage. These towers are not a big problem to the bird population. People who really worry about such things likely want to see all broadcast towers eliminated - along with all tall buildings, roads, cars, electricity, ranches, and anything else that's man-made.

This is exactly why you don't hear about towers and birds as a major
issue. As someone who has worked around towers for decades, I can tell
you that I have YET to see a dead bird on the ground or stuck in a
tower. I don't know what an appropriate "action number" might be, but
most assuredly "zero" is not it. Thirty-five years of working at tower
sites and never seeing a manifestation of the phenomenon leads one to
believe that it is not one of our major global problems.

Well, considering that the sponsor is the customer, they ultimately are
in charge. You can only offend customers to a certain point before they
walk. On that basis, they hold the power.

>cobbled the smaller cellular companies together to form a single
>promotable network. Cellular one was just a common name given to
>independent companies to make them appear larger than they were.

B and A only mattered when 800 was all there was. The A and B bands
are 800 MHz. C-F aren't. Sprint is F in many places.

Regarding digital v. analog: I've carried a cell phone since 1993. The
first carrier here in Cleveland to go digital was GTE Mobilnet and I
purchased a digital phone in 1995.

There is a huge difference. HUGE. But this is not to say that digital
is always better. I'd say most of the time it is, but not 100% of the
time.

On the other hand, you can't judge digital quality by the performance
of one carrier and one network. Even with the same carrier, network
performance varies from city to city.

My family and I use, or have used in the past, Nextel, AT&T, Verizon
(former AirTouch/CellularONE), Alltel (the former GTE Mobilnet network
here), Sprint PCS, Northcoast PCS (a local-only unlimited-airtime
prepaid provider like MetroPCS and Cricket in other cities), and
VoiceStream/T-Mobile.

That's all of the cellular companies servicing this area, except
Cingular (Ameritech). [Worldcom doesn't count, as they never ran their
own network. They resold airtime from other carriers.]

And I've noticed that service aspects do vary from city to city.

I use Verizon, my wife uses Sprint. We're both very happy with their
service. But they have known problems in other areas.

AT&T got hit with a lawsuit due to its inability (a few years ago) to
fix capacity problems in NYC. Some other carriers have had similar
growing pains.

There is no one carrier that is right for everyone everywhere.

>I do a lot of camping far from civilization. Not one of the PCS
>providers reaches me anywhere I camp. Both Verizon and AT&T do. Most
>of the time in digital mode.

What that means is that those carriers just built out earlier than the
other carriers did.

Ok... back to on-topic now. I just wanted to make a point: I don't
know anything about IBOC, but I know a little about cellular
technology... y'all ought to be careful when using cellular phone
service as an example of why digital radio is better or worse than
analog. There is just too much of a variance between carriers and
markets for such a comparison to make sense.

Most engineers who have been responsible for tower maintenance for decades
have never seen a single dead bird. This whole thing may be in the realm of
exaggeration or urban legend.

While I had a cow electrocute herself on an AM tower (thinking the base
insulator was a salt lick), I have never seen a dead bird, despite having
towers that ranged from 2 feet AMSL to 14,000 feet AMSL. And I have been
around towers for 43 years.

>The loss of C-Quam wouldn't cause me to lose any sleep.

That's the same thing most lazy engineers say. Obviously, you've never heard C-Quam done right. For example, right now I'm listening to WLS in stereo on a Carver tx-11a...Fabulous! Blows away many FM stations...even at night.

>This all may be a moot point in that very few receivers even reach
>5kHz.

Let's see...GE Superradio, most OEM car radios, most Phillips-Magnavox radios (shelf systems, boom boxes), older Carver equipment...Need I go on?

Even my roommate, who is NOT an audiophile or radio geek, could hear the horrible "hissing" from WLW when they were testing IBOC, and now on WOR.

So much for dxing as well...the AM band is being turned into an even noisier wasteland.

Try horizontal first; will possibly attenuate some noise from local
adjacents -- particularly if you can get alignment away from a sidelobe.

Something a simple as a spectrum analyzer could do this -- and a real high
gain yagi would really help.

Birds are funny. I live about 300 yards from an AM tower. I've never
seen
a dead bird under it. I've never seen a bird sitting on it. But on the
trees near my house, at the proper season (like .... next week) one can
see perhaps 4000 birds on one tree, and 0 birds on another tree 50 feet
away.

No, the idea is that they have exactly the same right to withdraw their ads
that you have to air something that would make them want to do so.

Hmm. Then my sources are inaccurate. They've always told me PCS was lower in power You're telling me that they're the same?

My camping spots are well inland from several interstate highways. The PCS services work fine along those highways. There seem to be as many cell towers as there are street lights. I know there are no cell towers deep in the woods. I camp on private land but I've seen public campgrounds with lists of cell services that work at their sites. None of them are PCS.

I recall seeing a Popular Science-type explanation of PCS before it was actually approved. It led me to believe you had to be very close to a cell site for it to work. Friends in Telecom confirmed that the information was correct.

As far as digital quality goes, I remember Cellular One giving me a free digital phone if I'd be willing to stop using analog. Early digital sounded like I was speaking under water. The phone itself required a U-Haul trailer, it was so big.

My newest phone (I change them often - early adopter syndrome) has everything except the ability to watch Debbie Does Dallas (that's my next phone). If I enable web services I'll risk carpal thumb syndrome.

Rich

> Dunno what good that would do. Sounds about like suspending a kid from
> school for being a habitual truant. (Not to mention that, if the advertiser
> has good lawyers, they might figure out some way to sue you.)

Well, it does have a positive effect. I had to reach pretty hard to come up with a defense of what Ron suggests.

It makes the station managment feel a little better over their screw-up.

Beyond that -

- it doesn't bring the advertiser back
- it almost guarantees that the advertiser will never come back
- word will get around to other businesses that they did that, and those advertisers will look elsewhere to send their money

So the business community will have a great belly-laugh over a tactic such as this.

You used the example of suspending a kid from school for being a truant. I think it's more applicable to a real-life situation I've seen where the neighborhood kids decide, instead of throwing eggs at the candy store across from the school, where the owner is nasty and scary, choose to just take their business elsewhere.

The store owner can put up a sign that says "only one school kids in the store at a time". Yeah, that'll show 'em. In a few months, his revenues are down, he can't pay his rent, and bye-bye business.

The listeners are the commodity; the advertisers are the customers; the
stations are the vendor. The stations deliver listeners' ears to the
advertisers for a fee.

Offending the customer brings ratings, which brings more customers not so easily offended; or perhaps seeing what free publicity is.

We must have started in the business the same year :-)

The bird thing has only surfaced very recently for me. I don't recall
any engineers at stations I worked for or my affiliates at networks
mentioning this being a problem.

I was at WJIB, Boston, when the candelabra tower was built. Our
biggest problems were falling ice in Winter and some orange and white
cars in a motel parking lot below. Unfortunately, the cars weren't
orange and white when their owners bought them.

Digital is lower in power than analog (analog=up to 3w; digital=up to 600 mw)

I don't know that there's any difference in the PCS band vs. 800 MHz.

I know that tower well. It almost came down in a storm about ten years ago, after which it was reinforced. WJIB(FM) is now WTKK and transmits from the Prudential Center.

I've seen hawks using the WBZ-TV tower as a perch.

Did you ever watch Arthur Godfrey in the 50s? ``Lipton got a new
chicken so the soup's pretty good this week.''

That sort of advertising does more for you than any ad you could plan.
It shows you're a good sport, and it reframes programming in the
reality in which you're a good sport.

Both program and advertiser benefit.

If you have an advertiser who isn't a good sport, boost your ratings
by slamming him. Listeners like it. Advertisers who are good sports
will buy into it, even new ones.

Jeez, the fear of moron advertisers is probably responsible for all the
ills of the world.

There is also the issue of excluding one advertiser while accepting others in thier category; it's OK to not except XXX Theatres as long as you exclude them all. If a station excluded OSH, but not TrueValue, they could have a discrimination matter on their hands.

Yes. There are a couple of dozen non-D 50 kw clear channels. The rest of us
have lower power, directional arrays and all the other stuff.

While substantially remedied, platform motion was a big deal; listening to
an AM stareo station even in mono in deep nulls was painful. I saw "wrong
side of pattern" ratings increase 300% based on a ZIP code analysis after
dumping C-Quam at KTNQ in LA in 1995.

I could never afford or justify the cost of a Carver, a situation I think
most listeners find themselves in, too.

Well, I have two cars with Bose systems and one with a stock Jeep/Chrysler
radio,a nd the AM sections just suck. They sound like telephones. Most OEM
car radios today have crummy AM sections; many aftermarket ones are just as
bad, especially the $39.95 kind popular with used car buyers.

GE has probably made less than 500,000 Superradios; it is a niche product .
There are even less Carvers. There are 70 million radios in the USA.

There are less than 1000 serious DXers in the US; they will have to get over this change. Should radio be held hostage so someone can get WABC in Missouri?

But considering that hardware stores are generally pretty innocuous (I mean, I cannot figure out how a Lowe's or Home Depot or Ace Hardware or True Value ad could offend, but I'm sure someone will stretch to make an argument) -- I can't see why someone wouldn't want their advertising dollars.

"It's my understanding that Sprint is a PCS service. The early reading I did on PCS indicated it was intended as a very short range service requiring many more sites than the "standard" A and B cell providers."

That's right -- Sprint PCS (and T-Mobile) operate in the 1900 MHz PCS band.

"The B provider is always Ma Bell or the local telephone company, The A provider was a competing provider like, in the early days, Cellular One."

That's not quite correct, at least in reference to the B band. When the metropolitan cellular licenses were first issued, A licenses were issued to non-wireline carriers as you note; B licenses were issued to existing wireline carriers, but *not necessarily* to the dominant wireline carrier in that metro area. To name three examples, the B license went to GTE in Indianapolis (Ameritech territory), to Ameritech in Cincinnati (Cincinnati Bell territory) and to BellSouth in Lexington, Kentucky (GTE, now Verizon, territory). The FCC in recent years has not prevented A-side systems from being sold to wireline carriers, which is how GTE was able to buy a number of A-side systems.

[Moderator's Note: A and B no longer really matter. Phones these days rely on their preferred roaming lists (prl's) to tell them which networks to prefer.]

This discussion is missing the point. AM IBOC is a huge step
backwards from existing analog audio quality, even on a crappy analog
tuner. I've heard it. Under ideal show-demonstration conditions it's
unlistenable -- I can only imagine how much worse it would be under
real-world conditions. That it degrades the analog signal is just one
more argument against it. I agree that AM radio should not be "held
hostage" to DX'ers. This is not about pleasing DX'ers or a few
gearheads who own Carver TX11a's (of which I am one). The quality
is inferior to what now exists, and to what the typical AM listener
now hears on his or her typical AM tuner.

Since with mono talk audio, such as what KTNQ was likely running, the
only difference between a monaural and C-Quam Stereo AM signals is a
subaudible pilot tone modulated at 4%, I fail to see how turning this
off would make such a substantial difference, unless either an
unusually large number of your listeners were using AM Stereo equipped
radios that failed to switch automatically to Mono mode as appropriate
based on available signal strength and quality, or there was some
incompatibility between KTNQ's C-Quam exciter and transmitter and/or
antenna array that was causing the degraded signal towards the nulls.

Indeed, suppose KTNQ was transmitting mono talk audio through the
C-Quam exciter with the pilot tone turned off. Then, theoretically
there should be *no* difference between it and a pure monaural signal,
and thus any degradation of signal coverage would be caused by some
factor other than the inherent design of the C-Quam AM Stereo system.

Once in a while I come across a "monaural" AM station which is
actually transmitting single-channel (i.e. Left or Right only) C-Quam
"stereo" audio with the pilot tone turned off, such as 1150 WRUN in
Utica, NY. Obviously in this case, an unknowing engineer thought that
AM Stereo acts like FM Stereo, where turning off the pilot tone
disables the whole system and leaves you with a mono signal.
Obviously that is not the case, but it still theoretically shouldn't
adversely affect mono listenership, as the matrix audio processing
compensates for the lost mono (L+R) volume of the single-channel
audio, and without the pilot tone, most AM Stereo radios don't see it
as being any different than a pure mono signal.

> Well, I have two cars with Bose systems and one with a stock Jeep/Chrysler
> radio,a nd the AM sections just suck. They sound like telephones. Most OEM
> car radios today have crummy AM sections; many aftermarket ones are just as
> bad, especially the $39.95 kind popular with used car buyers.

Volkswagen OEM car radios currently use a DSP design which has AM
audio response flat to 6 kHz. Many Ford/Visteon OEM radios continue
to be equipped with AM Stereo, and the ones that don't have a very
gradual drop-off of high frequency response, for a pleasingly mellow
sound that still lets the high sibilance get through on voice for
extra clarity. Blaupunkt has advertised their aftermarket car radios
as having "Superior AM Frequency Response".

> GE has probably made less than 500,000 Superradios; it is a niche product .

It is still seen on the shelves of most department stores, along with its "Optimus" clone at Radio Shack which has an even wider bandwidth on AM -- the Optimus's "Narrow" mode is about the same as the Superadio's "Wide" mode, and its "Wide" mode is really extra-wide, with audio response far in excess of the 10 kHz NRSC AM audio limit.

Philips-Magnavox radios with digital tuning use a high quality AM tuner module, with selectivity provided by IF coils rather than a ceramic filter, so the audio bandwidth is also unusually wide. Sony, RCA, Emerson, and Memorex boom-box and bookshelf stereos are also known to have above-average AM audio response, and all make easy conversions to AM Stereo using Motorola's third-generation MC13028 chip. I have even used a little $29.99 Sangean analog tuning shortwave radio that provides very crisp and clear AM audio, subjectively near "FM quality" from a well-processed station.

> There are 70 million radios in the USA.

I suggest you double-check your figures, as the 1995 edition WRTH I have on hand says there were more like 524 million radios in the USA at that time.

> There are less than 1000 serious DXers in the US

And how many who don't know that they're "serious"? Any 50 kW clear channel AM station with a live call-in show after dark will consistently get callers from multiple states, and taking into consideration the typical ratios of callers to listeners, that indicates a substantial amount of "DX" listeners. Stations like 770 WABC wouldn't constantly boast about their nighttime coverage of "37 states and 7 Canadian provinces" if they thought it only yielded them a handful of extra listeners in addition to their local groundwave coverage.

And on FM, those who have high-quality radios DX all the time without thinking about it, just by hitting the "Seek" button and stopping on a station playing a type of music they like. On a *good* car radio, "seek" tuning on FM in a non-rural area will often provide a listenable station on every 0.2 MHz increment across the dial, and people don't give a second thought to listening to out-of-area signals that IBOC would wipe out with its adjacent channel interference.

> Should radio be held hostage so someone can get WABC in Missouri?

Perhaps not, but WABC should at least be able to cover suburban NJ and CT, which IBOC at night may not be able to do. Tests of IBOC digital on 1500 WTOP in Washington, DC yielded an effective digital-mode coverage radius of less than 15 miles. If that's all a 50,000-watt station can get out of IBOC at night, I doubt a typical 1000-watt "graveyard channel" peanut whistle could even be heard beyond the end of the driveway of its transmitter site!

There's a lot of non-DXers who listen to distant stations to get away from a local programming choice which sucks.

The best radio within 350 miles is better than the best radio within 25 miles, almost all the time.

Syndication may lower the odds eventually, with equally bad programming everywhere. Or equally good: the radio I do listen to is as it happens syndicated, just elsewhere.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

I don't know how true this is, but I've heard that some transmitter buildings next to very tall towers have had to have some very heavy, durable rooftops as a chunk of ice of any size breaking loose and building up velocity from a 1000 foot high tower will crash through a roof.

This "deadly tower" story reminds me of a story that appeared in our local paper a few years ago. A woman from a wealthy suburb was leading a cry to get the cell phone towers removed from her town. She cited health hazards, microwave radiation, danger to the environment..... all of the "deadly tower" argument. Of course, because she was from a wealthy 'burb, some were skeptical, and that it was just she didn't like looking out on the window and seeing a tower in the distance.

And they took her picture with the tower in the background. Of course, Ms. Goody-goody-twoshoes forgot to take the pager and cell phone off of her belt when she posed for the pic....

While I may agree with you about IBOC, WTOP, on 1500 kHz, has pretty poor
local coverage in any mode. It's _SO_ bad that they duplicate on another AM
they bought in Frederick, MD, in an attempt to fill their big null, and on a
rimshot FM to fill Virginia suburbs. As far back as the 1940s, there were
daytime skywave problems on WTOP in downtown DC in low sunspot years.

It would be more interesting to know what the IBOC coverage of WILC was like
at night. I live about 15 plus miles west of WILC, and their IBOC sidebands
take out 890 and 910 at night. Their 500 W 3-tower night array has about 440
mV/m @ 1 km in my direction.

Our moderator noted:

"A and B no longer really matter. Phones these days rely on their preferred roaming lists (prl's) to tell them which networks to prefer."

Yes, so that (for example) a Verizon phone will prefer the B side in Indianapolis while favoring the A side in Louisville, since each is owned by that company. Supposedly some companies program their phones to not allow *any* roaming on other carriers with whom they do not have a good working relationship, even if the signal from their preferred carrier is inadequate; that's why there are plans in the works (I'm not sure if the FCC has actually put this through) to require newly manufactured cell phones to route 911 calls to whichever system has the stronger signal regardless of preferred roaming setups.

There was a report some years ago about the WSBK, Boston, (CH38)
having a large chunk of ice come through the roof. I recall our
engineers at WJIB and WLVI (CH 56) parking their cars quite a distance
away and hoping they wouldn't be hit as they walked up to the
building.

Rich

Such a case (one channel only being broadcast in stereo mode, pilot on or off) would have a very detrimental effect on many monaural radios. It would appear to the radio's envelope detector as extremely heavy IQM and the listener would be subject to very fatiguing distortion. Only synchronous and compensated envelope detectors would be able to handle this "one channel only" condition with any grace. Cheap radios would sound like crap.

Sorry. Missing zero. 700,000,000 is the figure.

That is true of almost any tower height. Even right here in the
temperate San Francisco Bay Area, buildings next to towers of very
modest height (like 200') have steel mesh and other protections so that
the falling ice (yes, we get that from time to time on our mountain
tops) will not damage the roofs.

I can imagine that where ice is really a big deal, the protections are
even more industrial.

False premise and false assumption.

KTNQ was braodcasting an all-grupera music fomrat in January of 1995 when we
took the C-Quam off; it continued to be mostly music for another year before
gradually transitioning to talk.

> Indeed, suppose KTNQ was transmitting mono talk audio through the

Among DXers, the Optimus is widely known as a terrible radio; it is so
braodband as to not separate between stations, especially at night.

I was missing a zero; the figure is around 700 million. The WRTVH is not a
good source for any information these days, especially things like reciever
counts (the Argentine receiver count is lower than the measured weekly
listenership of one nationally networked radio station, for example)
>

> coverage.

However, they do this as a "we are bigger than they are" ploy; these stations make nearly no money, or no money at all, form any coverage outside thier local metropolitan area.

A DXer is someone who listens to DX stations as a hobby, challenge, etc. A DXer is not someone who occasionally listens to a crystal-clear signal form a distant station. That is just a listener, not a DXer.

There are very few distant listeners and very,very few DXers. (Largest MW DX club has about 700 members)

WTOP on 1500 does not have exactly a good coverage, especially at night. Remember, 50 kw on 1500 _is_ the same as 1000 watts on 550; WTOP has both a bad frequency, the DC area's horrible conductivity, and, to top it off, it is directional.

Dunno about the orange-and-white cars, but when WCBS-TV had the side-mounted (actually corner-mounted) dipoles on the Chrysler Building they had some problems with ice during the first winter after they went up, and CBS had to come up with de-icing gear so that the passers-by wouldn't get run through by huge icicles.

The newest generation of decoders solve this problem quite well. Platform motion has all but been eliminated. And, most good engineers know the 'ol trick...shifting the
carrier about 15 Hz off center (while still keeping within the FCC's +/- 20 Hz tolerance). And, it is a myth that AMS causes loss of coverage area. But, I'll play along. Let's pretend that CQuam DOES cause loss of coverage...So does FM Stereo...That's a well known fact. Go ahead...I dare you to turn off your FM Pilot tone.

>I could never afford or justify the cost of a Carver, a situation I think
>most listeners find themselves in, too.

If average Joe or Jane wasn't going to spend the money for a nice analog tuner, what makes you think that they'll spend it on an inferior digital tuner? Let's see...adding $100-$150 to the cost of a tuner, added with no increase in the quality of programming, plus the bad state of the economy...all for audio that they can get out of a $19 sound card and RealAudio? You think they'll really buy them??? Analog AMS was very affordable...Just pennies added to cost. Plus, with both Motorola and Phillips working on new DSP chips that can add CQuam in software, the cost goes down even further. In the 2000 catalog (last year they sold them [afaik]), Radio Shack sold the Sony AMS walkman for $29.95. Will an IBOC walkman be that cheap?

>bad, especially the $39.95 kind popular with used car buyers.

Well, there's your problem. What's the old saying...No highs, no lows must be Bose. My 2000 Jeep Cherokee has the RAZ tuner...Very nice AMAX compliant AM stereo, thank you very much. My roommates GM car has the UX-1 AMS radio...Also AMAX compliant. And, a quick check of the web sites (ford.com, gm.com, and chrysler.com) shows:

All Ford premium sound systems have AMS

GM offers AMS standard in the Cadilac family

And Chrysler offers AMS standard on a majority of the in-dash CD systems, and as on option on every model of Chrysler/Jeep.

My personal experience with OEM radios has been that they have great AM sections. It's the after-market units (Alpine, JVC, Pioneer) that suck. But most buyers are more concerned with CD functions there.

>
>GE has probably made less than 500,000 Superradios; it is a niche product .
>There are even less Carvers. There are 70 million radios in the USA.

The GE Superradio is a niche product? That's odd...The local K-Mart and Meijer both stock them side by side with other battery operated units...in stock for $39.99. I'll give you that Carvers were a niche brand. But what about the Phillips-Magnavox brands? A quick glance at their web page shows many of their boom boxes and shelf systems with an AM frequency response of 40hz-8khz, +/- 3db...Not exactly narrow-band for a mass produced brand.

>There are less than 1000 serious DXers in the US; they will have to get over
>this change. Should radio be held hostage so someone can get WABC in
>Missouri?

OK, fine. But should listeners be held hostage by Clear Channel, Infinty, etc? The answer SHOULD be the same...probably not. That's why I signed the Petition to re-regulate radio at http://www.petitiononline.com/rereg/petition.html

One final thought...Since the iBiquity box runs Linux, and Linux is GPL, maybe someone ought to see if the iBiquity code is violating the
GPL license by linking to the GPL libraries. If so, this coud be a stumbling block for iBiquity. And I find it funny that the WOR-NY digital box has already crapped out on them!

Suggesting a sponsor for crime equipment is plainly of benefit to the
sponsor; it just reframes the ad.

The problem was a moron sponsor.

Unless you know something about OSH that I don't, I think you may be speaking out of school. That company has been successfully advertising on Bay Area media for decades. Its ads are timely, tasteful, and apparently effective...since they spend a great deal of money on media advertising. That gives them the right to expect a certain amount of respect from their advertising vendors.

Consider, also, that the DJ who made the remark has since been removed from the air, over this and other incidents. In other words, it appears in the long run that the station agreed with the "moron sponsor" in terms of its programming objectives.

In this particular case, the sponsor did absolutely nothing to warrant berating for its actions. It was dissed on the air by a DJ who, already, was skating on thin ice. The sponsor spoke with its wallet. The station listened. That is the marketplace in action.

If more vendors listened to their customers that way, American business might be in better shape right now.

>preferred roaming setups.

My Nokia 3285, a relatively new model just released earlier this year,
did; a few months ago I had to call 911 from in front of my house... I
live in an area along Lake Erie where only one carrier has strong
coverage, and it's not my carrier; but instead of latching onto the
weak digital signal my carrier has in my neighborhood, I got a
really *strong* analog connection to the 911 operator.

If I'd connected to my own cellular company's network, the call would
have been (a) digital and (b) weak. Well, not too weak - if I'm
outside and pointing eastward I can catch the tower they have that
covers the Headlands. But it was definitely easier to make the call
than it would normally have been.

What you're talking about, I suspect, has already happened on a large
scale.

Hi John,

I don't understand your reasoning here, could you elaborate on this? Why would single channel modulation in an AM stereo system "appear to the radio's envelope detector as extremely heavy IQM"? The quadrature signal component in the CQUAM AM stereo system is specifically designed to have a minimal impact on the signal envelope, as seen by the normal envelope detector.

Why would this envelope detector distortion problem affect only monaural radios? Stereo radios also recover the main L+R signal modulation with an envelope detector. Also the L+R signal demodulated by the envelope detector is used in the AM stereo demodulator to undo the pre distortion of the quadrature signal, and in phase signal too, that is introduced at the transmitter, this should propagate any distortion due to envelope detector into the stereo difference, or L-R signal too.

I know, you are going to say that the narrow IF filters in the receiver remove some of the modulation sidebands that are necessary to prevent distortion, before they can get to the envelope detector. I would think that much of the distortion produced this way would be at higher audio frequencies, above those the radio normally reproduces, so that low pass filtering in the audio stages could eliminate the distortion components, without having a significant impact on the desired modulation frequencies.

Next you are going to tell me that an asymmetrical IF filter response will also cause distortion with a single channel AM stereo signal. That is true, but it is equally true that an asymmetrical IF response will also effectively generate quadrature components in a normal monaural AM signal, with the resulting distortion when an envelope detector is used.

Distortion due to quadrature signals in an envelope detector is already a problem with monaural AM, why is this a new problem with AM stereo? Cheap radios already sound like "crap" on monural AM signals, why should we expect a cheap radio to sound any better with AM stereo?

It isn't a matter of reasoning; it is a matter of observation. I could
easily tell on most cheap mono radios if one channel of the station went
away. It wasn't subtle.

> Why would this envelope detector distortion problem affect only monaural

Because heavy phase shift distortion is part and parcel of cheap
envelope detectors. Most stereo radios use synchronous detectors.

No, I'm not going to tell you any of that stuff. You seem to be
providing both sides of the theoretical argument just fine. I'm speaking
of actual, hands-on experience from engineering several AM stereo
stations over fifteen years. You can argue theory (both sides if you
like) until you are blue in the face. All I'm telling you is "what is".
Things usually work much better in promotional literature than they do

in the field.

> Distortion due to quadrature signals in an envelope detector is already a
> problem with monaural AM, why is this a new problem with AM stereo? Cheap

But my point was that a monoaural radio sound much WORSE when tuned to a
stereo station on which only one channel is modulated. I doubt very much
that any theory you can spout can erase fifteen years of practical
experience with AM stereo.

There's something called the barbecue effect, where the more people there
are, the worse the hamburgers are. Hamburgers cook until the most timid person
thinks it's long enough.

The most uptight sponsor is not the best programmer nor the best judge of even
his own interests. The _average_ sponsor is.

Were I a hardware store, and some burglar is injured in a fall, I'd be happy
if the DJ recommended my fine selection of ladders. The DJ has a right to
assume that I am not a moron, and act accordingly.

If you want your neuroses soothed, don't go to a radio station.

Unless the radio station is run by morons! That's why we have words like ``chickenshit''
and ``tightassed.''

That's not inconsistent with what I said later in my post, the operative
word is "cheap", and I would expect a similarly "cheap" stereo radio to be
just as bad.

> > Why would this envelope detector distortion problem affect only monaural
> > radios?
>
> Because heavy phase shift distortion is part and parcel of cheap
> envelope detectors. Most stereo radios use synchronous detectors.

Many (if not most, or even all?) stereo radios that take the L+R signal
from the synchronous detectors still have an envelope detector as part of
the "cosine correction" circuit, or what ever it is called, that feeds the
synchronous detectors, so any problem with envelope detection would still
affect the output of the synchronous detectors in the stereo mode. The
early stereo demodulator chips used the output of the envelope detector
for the L+R signal, so unless the recent production volume of AM stereo
radios is greater than I think, the larger production numbers early in the
game would imply that most stereo radios used envelope detectors. The
envelope detectors used were of the pseudo synchronous type, where the
signal to drive the carrier input is obtained by passing the signal
through a limiter, but they are still envelope detectors none the less.

> > Stereo radios also recover the main L+R signal modulation with an
> > envelope detector.
>
> Not good ones.

Can you point me towards a "good one", and more particularly who provided the AM stereo demodulator chip used in it? I am curious to see an AM stereo demodulator circuit that avoids the use of an envelope detector entirely. I am sure it can be done, but suspect it is probably not without its own problems, and I have to wonder if it really eliminates problems related to envelope detectors, or if mathematically it just ends up getting the same result, including envelope detector artifacts, a different way.

I gave a talk in 1990 on natural language with the title ``Can Insensitivity be Automated?'' so you may have my number.

Your side, I assume, wants the woman to be a helpless victim. My side takes a look around at the average woman you run into and finds they can take care of themselves pretty well. That's the insensitive point of view for you.

An untrivial view of women is still too complicated for propaganda, I guess; which this template fits.

That may be true, but it is irrelevant. The radio station is the vendor;
the advertisers are the customers. Any business that just says "up
yours" to its customers deserves to and should go out of business.

Here's the bad news: programming on commercial stations is HIGHLY
influenced by the advertisers. Advertisers provide the revenue for the
stations and the stations cannot afford (literally, in every sense) to
alienate the sponsors. Period.

If you don't like that, listen to "listener-supported" radio.

> If you want your neuroses soothed, don't go to a radio station.

If I'm the one paying the bills, I'll go where I like.

Or how about "business smart" or having "business savvy". This may come
as a shock, but commercial radio IS a business.

The _product_ of the radio station is audience. You can't let a customer screw
that up.

Alfa Lima International on 15070 and somewhere between 6310 and 6200 tonight

ALI will be on air (as almost always) on 15070 kHz AM and between 6200 and 6310 AM
Transmission into the 48 mb will be carried out with only 50 watts and on 15070 with 300
Soon both frequency's will be used with 300 watts but until that time the lower one with lower power.
Plans to start up around 22.00 or 22.30 UTC this Saturday and continue till 07.00 UTC on Sunday. Maybe even a bit longer.

Fairly said that we are broadcasting this way every week but due some heavy tech problems it was not sure if we did continue this way, but after sponsoring our selves again big time we can run our shows again

Also we do have brand new full colour and great design QSL Cards and info sheets as well new design T-shirts in stock with full colour printing. Examples are to see on our webpage (see below).

If you like to get our little QSL pack send a correct reception report to our mail drop (aswell below) and enclose 1 USD or if you don't have US Dollars your local currency (money), Just enough to cover reply.

Just a quick note for publishers, Al the information that is available on our webpage is free for publishing, There is also an zip file link below with a brand new pack with photo's and info concerning our station.

Hope props are good.
Greetings from Alfred
ALI

News flash. The reason the _DJ story_ has legs is that the story itself is entertainment _to you_. Your side is getting something out of it. This is called economizing it. Oh! the rush you can get out of outrage and calling the station! What caring people you are!

I am rejecting that where it starts. The right course is to respect the woman's position and say she can deal with it as appropriate; the story is not moral entertainment for me and should not be for you either.

There's no moral high ground that doesn't involve hard work, deep knowledge and self-sacrifice. There is only posturing otherwise. Nothing is more common. There's no work, knowledge or sacrifice here.

But did you notice a Permanent Question in this story? Here's James Thurber on the Radio Soaps

``In many soap operas, a permanent question is either implied or actually posed every day by the serial narrators. These questions are usually expressed in terms of doubt, indecision, or inner struggle. Which is more important, a woman's heart or a mother's duty? Could a woman be happy with a man fifteen years older than herself? Should a mother tell her daughter that the father of the rich man she loves ruined the fortunes of the daughter's father? Should a mother tell her son that his father, long believed dead, is alive, well, and a criminal? Can a good, clean Iowa girl find happiness as the wife of New York's most famous matine idol? Can a beautiful young stepmother, can a widow with two children, can a restless woman married to a preoccupied doctor, can a mountain girl in love with a millionaire, can a woman married to a hopeless cripple, can a girl who married an amnesia case - can they find soap-opera happiness and the good, soap-opera way of life? No, they can't - not, at least, in your time and mine. The characters in Soapland and their unsolvable perplexities will be marking time on the air long after you and I are gone, for we must grow old and die, whereas the people of Soapland have a

magic immmunity to age, like Peter Pan and the Katzenjammer Kids.
When you and I are in Heaven with the
angels, the troubled people of Ivorytown, Rinsonville, Anacinburg,
and Crisco Corners, forever young or forever
middle-aged, will still be up to their ears in inner struggle,
soul searching, and everlasting frustration."

Bring back the all-grief channel for you guys. Put the woman in
your story-template and there you are. She's helpless.

Imus encountered the story on his Scum Report, took the position that it was bad
behavior on the part of DJ or audience, and McGuirk added ``Arizona
Morning Zoo.''

He didn't offer sympathy to the woman nor did he have the position to do so;
just commented on the demographics.

A very nuanced moral position, to see what it isn't one's place to decide.

The popular line is clear enough. That's how the story has legs. It
infantilizes the woman however, which you guys are very happy to do in
support of your own self-satisfaction.

HAM RADIO IN SPACE: ZL ANNOUNCES PLANS FOR KIWISAT

Ham radio in space is coming to New Zealand. This, with announcement of a new ham radio satellite to be designed and built down-under. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has a close-up look at Kiwi Sat.

--
Yes, that's actually its name. Kiwi Sat. And in case you were not aware, the Kiwi is a bird with thick hair-like feathers, no tail, a beak one third the length of its body, and nostrils at the tip. It looks like a cross between a hedgehog and an anteater. And its found only one place in the world. Here in New Zealand. Its our mascot and we love it. And now the hams of Kiwi-land are naming our soon to be built ham satellite after it.

Like the bird that its named after, Kiwi Sat will be a bit unusual in its own right. It will be a rather small ham-sat. A 237 millimeter cube based on the early 1990's Microsat technology developed by AMSAT. But it will carry some 21st century electronics that will enable it to run both as linear translator for low duty cycle modes like sideband and C-W as well as an F-M transponder to serve the needs of the overall ham radio community. This, even though the solar cells can only produce a maximum of 15 watts of available power at any given moment and an average of only 6 watts. Uplinks will be on 70 and 23 centimeters with Kiwi Sat talking back to Earth on 2 meters.

But there's more. Plans also call for Kiwi Sat to carry some sort of scientific experiment and possibly even a digitalker module. This would permit the satellite to identify with its own voice as well as provide some good publicity for the Kiwi Sat project. All of this made possible by the many advances in microchip design that have taken place since the first Microsat was launched.

There is one big difference between a feathered Kiwi and the ham radio satellite the hams down here are building that I should mention. A live Kiwi

cant fly. Kiwi Sat will.

>From Auckland, New Zealand -- down-under -- I’m Jim Meachen, ZL2BHF, reporting for the Amateur Radio Newsline.
--

A s we go to air, no completion or launch date has been announced for Kiwi Sat. An excellent article on the project appears in the summer edition of the AMSAT Journal. (AMSAT)

**

HAM RADIO IN SPACE: PC SAT IN ECLIPSE

Meantime users of the P C Sat ham satellite are being requested to please turn off all unattended night time transmissions. This, to conserve energy while the bird is not in direct sunlight and having its batteries charged.

According to Bob Bruninga, WB4APR, P C Sat left full sunlight on Sunday September 30th. The bird is still fully operational but is passing through 25 minute eclipses on every orbit. And because of these eclipses the overall power available on board P C Sat is down. Keeping unattended beacons off while you are not there cuts the load on the satellite power supply significantly.

Bruninga says that with everyone’s cooperation the satellite might be able to make it to full sun again in November. He adds that normal operations are O-K when the satellite is in sunshine and the batteries are on charge. (AMSAT)

**

RADIO LAW:: FOLLOW-UP – S.A. ACTS TO PROTECT THE 70 CM BAND

A follow-up to last weeks story on the probable threat to the 70 centimeter band posed by a planned Earth Exploration Satellite Service that’s soon to be launched. As reported last week a discussion paper will be brought before the World Radio Conference next year that directly targets 432 to 438 MHz for exclusive use by the Earth Exploration birds.

The threat is very real and now comes word that at least one national ham radio society is taking action to stop the incursion. The South African Radio Relay League which was the first to make information on the threat public is already engaged in urgent talks with the that nations telecommunications regulatory body. Their objective is to try and convince the radio law makers that such a reallocation of spectrum would be a severe blow to the future of amateur radio. Others national societies are expected to quickly do the same. (SARL, Q-News)

**

RESCUE RADIO: HAMS HONORED FOR TORNADO WORK

Ham radio Radio Skywarn spotters from 14 Central and Southern Indiana counties are being given credit for helping save lives. This, during an unusual outbreak of tornadoes the morning of Friday, September 20 th. Amateur News Weekly’s Jack Parker, W8ISH, tracked the storm and has this report.

--
When an F3 Tornado started it’s destructive journey across Indiana, Hoosier hams were hot on the trail. In fact, the storm moved so quick several amateur radio operators almost became casualties themselves.

The mid-morning outbreak started as a line of strong thunderstorms associated with a cold front. Tornado touchdowns were reported in several counties southwest of Indianapolis before noon. The storm gained strength as it ripped apart homes and businesses while tossing cars like they were matchbox toys. Many amateur radio operators saw first hand the destructive power of these late summer storms. Around 1:00 p.m., an F3 tornado touched down in Ellettsville, just west of Bloomington, Indiana. Two Ellettsville hams, Mike Poe, KB9SGN, and Russ Ryle, N9DHX, had close encounters with the super strong tornado. According to one Monroe County Spotter “The tornado went right past Mike’s house. Poe was in his driveway trying to get away in his truck and wound up dodging parts of his neighbors house while transmitting a warning to the Bloomington repeater. At the same time Russ Ryle was taking cover.

--
Ryle: “I was just passing information for my local area. First report I had was, we had a tornado on the ground. I could see some debris. At that point my wife and I took cover in the bathroom”.
--

As many as four tornadoes skipped across Indiana covering 112 miles. Over 20,000 homes were damaged. Thankfully, no one was seriously injured or killed. The National Weather Service office in Indianapolis credited the Skywarn spotters with saving hundreds of lives. As the NWS began to receive frequent damage reports, activation of spotter groups became critical. The NWS requested spotter information be relayed to their office as quickly as possible so counties in the path of the storm could be alerted.

According to National Weather Service Warning Officer, Dave Tucek, quick actions by spotters helped the NWS increase watch and warning lead times to 25 minutes or more, saving lives.

After the storm passed, many of the individual county spotters groups teamed up with their local Red Cross, Salvation Army and Emergency Management agencies to provide communications between shelters and county EOC’s. Some of the amateur radio operators found themselves working with damage assessment teams while providing communications for National Guard clean up crews. Reporting from Indianapolis, for Amateur News Weekly, this is Jack Parker, W8ISH
--

Following an aerial survey of the damaged areas, Indiana’s Governor Frank O’Bannon said this is the most wide spread tornado damage to hit the state in over a decade. Damage assessments are expected to be in the millions. (ANW)

**

RESCUE RADIO: FCC OK'S NEW PERSONAL LOCATOR BEACONS

If you are a ham involved in search and rescue work, listen up. The FCC has issued a report and order that provides for licensing individual 406.025 MHz personal locator beacons or P-L-B's. The agency says that it will require mandatory registration of these devices with the National Atmospheric and Oceanographic administration.

According to the CGC Communicator, a 406 MHz digital P-L-B signal contains information on the type of emergency, the country an identification code of the beacon in distress and other information to facilitate search and rescue operations. Even more important, a 406 MHz distress signal can be received and stored on-orbit by the COSPAS/SARSAT satellite and later retransmitted to the ground. That should eliminate the so-called blind spots found in older 121.50 MHz and 243.00 MHz devices. (CGC Communicator)

**

ENFORCEMENT: YOU GET YOUR OLD CALL BACK

The FCC has written to Jamie H. King, Jr. of New Bern, North Carolina to tell him that it has canceled the Vanity Call Sign W4JHK and has reinstated his previous KG4RLJ call. Amateur Radio Newslines Bruce Tennant, K6PZW has more:

--

Back on June 19th the agency requested that Jamie H. King, Jr., provide documentation of his claim that he was a former holder of the W4JHK call sign. He responded by letters dated July 20th and 27th. In his reply King stated that he believed that the problem seemed to lie in interpretation of blanks to be filled in on the Vanity Call Sign application. He says that when he completed the application last February, he interpreted the line 'Former Primary Station Holder' to mean any primary station license, regardless of call sign, issued at a date earlier than the application. Therefore he says that he was referring to his previous license KG4RLJ when he checked that line.

But the FCC says that explanation might be acceptable if King had only checked the "Former Primary Call Sign Holder" block. But the FCC says that King also wrote in the call sign W4JHK. Also, that the application block contains the statement -- quote -- "This call sign was previously shown on my primary station license."

The FCC says that in view of the fact that King has never been a former holder W4JHK, that his call sign reverts to KG4RLJ. It says a license bearing that call is on its way to him.

Reporting for the Amateur Radio Newsline, I'm Bruce Tennat, K6PZW
--

The FCC adds that it is not pursuing further enforcement action at this time but cautioned King to use care in the filing of any future applications with the FCC. (FCC)

**

ENFORCEMENT: BIG FINE FOR SELLING ILLEGAL CORDLESS PHONES

The FCC has issued a $7,000 against Lightning Electronics Incorporated of Miami Florida. This, for willful and repeated violations of the Commission's rules involving Lightning's marketing of unapproved long-range cordless telephones. Phones that the agency says are capable of interfering with aviation safety. Phones that hams say are ripping up the two meter band. We have this report:

--
Back in February of 2001, the Federal Aviation Administration told the FCC that some pilots were reporting receiving sporadic interference to an aviation frequency here in the Miami, Florida, area. In March of 2001, the FCC’s Miami Office identified the source of the interference as a long-range cordless telephone being operated from an electronics store in Miami. That one was quickly removed from the airwaves.

As a result of the FAA’s concerns, the FCC launched a nationwide investigation into the unlawful marketing and use of long-range cordless telephones. During the inquiry, the Bureau discovered that electronics dealers were selling long-range cordless telephones in several states. It also found that certain of the long-range cordless telephones caused interference by transmitting spurious emissions on aviation frequencies. Even more scary -- others were specifically designed to operate in the aviation band.

During the investigation, agents from the Miami Office visited Lightning Electronics retail store. This took place on July 27, 2001. While there, agents saw several of the illegal long-range cordless telephones on display. Models included a Super Phone CT-9000, a Prolink CT-6000CID, and an Optima OP8810.

According to the FCC, a salesperson at Lightning offered to sell one of the units to the agents. As a result, on August 24, 2001, the Miami Office issued a citation to Lightning for violation of rules which prohibit the marketing of unapproved radio frequency devices.

But the company apparently did not heed the warning. On September 26, 2001, agents from the Miami Office and from the Tampa Office again visited Lightning’s retail store. At that time they purchased a Prolink BAO-6110CID long-range cordless telephone and antenna for $669.80. The telephone the agents purchased was capable of causing serious interference to aviation communications and was not approved for sale by the Commission.

On October 29, 2001, the Tampa Office issued a Notice of Apparent Liability to Monetary Forfeiture against Lightning but the company did not file a response. On February 21, 2002, the Bureau issued a Forfeiture Order. On March 8, 2002, Lightning filed a petition for reconsideration of that order indicating certain information did not pertain to the company. The FCC responded with a new order last May 21st and has now ordered Lightning to pay up.

>From Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.
--

So far the FCC investigation into the sale of these illegal high power cordless telephones has resulted in the issuance of several citations and fines by the agency's Enforcement Bureau. Its also gotten a few that bothered ham radio communications on two meters off the air. (FCC)

**

ENFORCEMENT: SBC TO PAY $3.6 MILLION IN CONSENT DECREE

SBC Communications will pay $3.6 million to federal regulators for filing inaccurate information in applications to provide long-distance service in four states. The consent decree resulted from Federal Communications Commission investigations of S-B-C applications to enter the long-distance markets in Missouri, Texas, Oklahoma and Kansas.

In agreeing to the consent decree the company admits no wrong doing. In fact, SBC says that the inaccuracies were the result of good-faith efforts in describing highly technical matters and not the product of any intent to mislead. (Published reports)

**

NAMES IN THE NEWS: MITNICK SELLING LAPTOPS TO PAY LEGAL FEE

Former computer hacker Kevin Mitnick, N6NHG, says that he is selling some of his personal items to pay a lawyer who is trying to save his ham radio license. Mitnicks' request to renew his license earlier this year end up in it being designated for a hearing. The items that Mitnick is auctioning off include his old Toshiba laptop computer which was taken by the government back in February of 1995. As this is written, that computer is up on e Bay with a top bid approaching $10,000.

A second laptop is also up for auction. It features a layer of fingerprint dust and red "X" marks where fingerprints were lifted. It also includes a mouse still housed in an FBI evidence bag. Both computers are signed on the bottom by Mitnick and former Apple executive Steve Wozniak. (Published reports)

**

NAMES IN THE NEWS: RAFY BRIEM N6FFT - TALKRADIO LEGEND -- RETIRES

Talk radio legend Ray Briem, N6FFT, has retired. Briem's last show was on Sunday evening September 28th over Los Angeles radio station KRLA. Before moving to the 870 spot on the AM dial Briem spent several decades honing the art of late night talk over at KABC radio on 790 Kilohertz. While there his show was eventually put on the ABC radio network, nationwide. (ASWLC)

**

NAMES IN THE NEWS: A.PROSE WALKER, W4BW - S.K.

A. Prose Walker, W4BW, the man considered as the father of the "WARC bands" has died. Walker headed up the FCC’s old Amateur and Citizens Division from 1971 to 1975. While there, he made the initial proposal for the creation of the 10, 18 and 24 MHz bands at a conference in Geneva 1972. Later, Walker organized and chaired the United States the Advisory Committee of Amateur Radio. This committee took the initial steps to turn the idea into reality at the 1979 World Administrative Radio Conference.

But there was another side of Walker that hams in the world above 50 MHz do not remember very fondly. It was a set of highly restrictive repeater regulations promoted by Walker back in the early 70’s. Among other things, these rules required the submission of what are today called engineering feasibility studies in order to get a required W-R prefix repeater license. The regulations were so strict that repeater growth almost ground to a halt for the better part of half a decade. Eventually, the ham community lead by 73 Magazine publisher Wayne Green, W2NSD, rebelled against the Walker inspired rules. They were repealed as a part of repeater deregulation a few years later.

Walker was living in Rochester, New York, at the time of his death. He was 92. (ARRL, Repeater Remailer, W9JUV, 73 archives, others)

**

ON THE WEB: INTERNET OUTAGE ON UUNET

If you think that the Internet went away for a few hours on October 3rd, you are close. What actually happened is that some users faced heavy delays reaching Web sites and accessing e-mail for a few hours because of widespread technical troubles on WorldCom's long-haul network.

A WorldCom' backbone called U-U-NET carries most of the Internet traffic in the United States. The problems began about 8 a.m. and about 20 percent of WorldCom's U.S. Internet. Very few if any lost service and Worldcom had service fully restored by early afternoon. WorldCom says that the problem appears to have been with the lists telling router computers how to pass data on to their destinations. (Published reports)

**

INTERNATIONAL - GERMANY: THE CODE SHOULD STAY

Germany’s Deutscher Amateur Radio Club is that country’s national Amateur Radio society. As previously reported, the D.A.R.C. supports the retention of Morse code testing as a license qualification. Now, D.A.R.C. has put this position on the discussion agenda of the International Amateur Radio Union’s Region 1 Conference. Its slated to be held in San Marino in November.

(Q-News)

**

INTERNATIONAL-UK: BBC AND B SKY B TO LAUNCH ALL DIGITAL TV NETWORK

The British Broadcasting Company and Rupert Murdoch’s B sky B network are teaming up to create a new all digital television service in the United Kingdom. According to news reports, the terrestrial service called Freeview will be launched on October 30th. It’s purpose is to fill the void left by the collapse of I-T-V Digital Television. If successful, it will give Great Britain a let up on the rest of the world by being the first nation with an all digital network.
You can read More at :
http://www.reuters.com/news_article.jhtml?type=search&StoryID=1530266 (Media Network)

**

INTERNATIONAL - NEW ZEALAND: HAM RADIO WALKABOUT

Well known land hiker Tony Whitiker, G3RKL, will be walking in the north island of New Zealand during the month of October. Tony will be walking from east to west and will be on the air using the callsign ZL6WFE. He will be on the New Zealand national repeater network and hopes to send Slow-Scan Television pictures live via the Internet Radio Linking Project gateways. (Q-News)

**

ON THE AIR: NEW PROPAGATION BEACON FROM FN20

On the air, Steven Kerns, N3FTI, in Reading, Pennsylvania reports over the VHF Reflector that he has established a new 2 meter propagation beacon from grid square FN20. Its on 144.279 Mhz running 4 watts out into a Discone antenna but he plans to change that to a halo in the coming weeks. Steve is also planning a 6 meter beacon to operate from the same location. QSN reports go to Steve at his callbook address. (VHF Reflector)

**

DX

In D-X, VE7XF is going back to the Cook Islands next weak in a muilti-multi operation to take part in the C-Q World Wide DX SSB Contest. He and the gang will operate from Manihiki on North Cook Island as ZK1MA during the event. Before and after the contest they will spend as much time as possible on 6 meter C-W and S-S-B with the call ZK1AKX. Listen for the operation from Manihiki from October 18th to the 31st and then on to Rarotonga South Cook Island from November 1st to the 11th. QSL cards go to Ralph Parker, 5330 Wallace Ave., Delta, British Columbia Canada at postal code V4M 1A1 (GB2RS)

K5AND, W5OZI and W5LXG will be operating from Montserrat from October 31st through November 8th. The trio will be focusing most of their attention on the 6 meter band using a Yaesu FT-897, a 7 element yaggi and radiating about 800

watts out and a Morse beacon on 50.155 Mhz.. From 20 to 10 meters they will run about 100 watts out. They say that the location is ideal for making 6 meter contacts across Europe, Africa and maybe even into the United States. As we go to air the most likely call sign they will use is VP2MJD. If you work them, Q-S-L as directed on the air. (VHF Reflector)

And Nick Peckett, G4KUX, operating as YA4F, has made what he claims is another first-ever contact on 6 meters from Afghanistan. Nick is now claiming that at 11:08 UTC on the 27th of September he worked VK6JQ in Broom, Western Australia for a YA to VK first on the Magic band. (G4NJH)

And G4IUF is on vacation in the Galapagos Islands. He hopesto be active on C-W and SSB from San Cristobal Island through the 23rd of October. He has requested the callsign HC8UF. (RSGB)

**

THAT FINAL ITEM: FIRST 'eDX100' AWARD TO 4Z4DX

And finally this week, word that the first ever 'eDX100' award, issued on the basis of electronic - or 'e QSLs' - was awarded on the 25th of September to Dov Gavish, 4Z4DX of Ramat Hasharon Israel. The ‘eDX100’ award is billed by its sponsors as an electronic equivalent to the ARRL's DXCC but is issued for receiving electronic QSL’s from a minimum of 100 DXCC entities through the eQSL.cc system.

eQSL.cc or the Electronic QSL Card Centre which sponsors the award is operated by Dave Morris, N5UP, of Garland, Texas. It is supported by an advisory board of volunteers around the world.

And true to the nature of electronic QSL’ing, 4Z4DX will be able to print an ‘eDX100’ certificate on his own printer. He will also receive a full-color certificate and a walnut plaque in the mail. (eQSL.cc)

Nope. The act of stereo demodulation mitigates the distortion caused by phase shifting carrier. A cheap stereo radio (in stereo mode) will deal with the "one channel-only" distortion much better than a cheap mono radio.

As for the rest of your reiterations, I'm not going to argue theory that pics nits with grossly evident reality. My original point that a stereo station broadcasting one channel only in stereo mode produces noticibly inferior audio on a typical mono radio than does a standard mono signal stands.

If you are in town some time, I'll be happy to demonstrate it for you.

It's not to my taste either, but I gather it is not meant to be, or rather
it is meant not to be. That's the attraction to their demo, it offends us.
It says: in some matters, let us alone.

I agree with their sentiment; the do-gooder won't ever leave you alone, unlike
a simple thief or louse, who merely takes what he wants and disappears.

Decency and respect are harder than you think.

The product is radio programming. The audience is the consumer.

Since radio has a bimodal marketing model, there is a second consumer who buys the product because of the audience. So, to an advertiser, the product is the audience attracted by the programming. To the listener, it is simply the programming.

> >the hiss dispappeared when off.

It looks as though the IBOC sidebands are causing high-frequency noise in your radio. Remember that FM stereo is broadcast by encoding the difference between the left and right channels onto a 38 kHz subcarrier whose spectrum covers from 23 to 53 kHz. If the noise caused by the IBOC falls in that frequency range but drops off in intensity at lower frequencies, then you will have clean mono reception but hissy stereo. I think that an even more interesting question is: how will IBOC affect a station's ability to provide SCA subcarriers? SCA subcarriers are even higher in frequency than the stereo information, typically 67 kHz, and they are transmitted at a low modulation level. I think that there could be some real problems here.

OK, let's get a few things straight here.

#1 - I didn't "express outrage" over that story or "call the station".
I think it's a pretty sick example of what a "shock jock" will do to
get ratings and attention, but that's about all I've said about it. I
was *solely* talking about YOUR position that the woman should have to
"buck up and take it".

>I am rejecting that where it starts. The right course is to respect
>the woman's position and say she can deal with it as appropriate;
>the story is not moral entertainment for me and should not be for you either.

Mr. Hardin, you have absolutely no idea what that woman, the widow of
the baseball player, is going through.

>Imus encountered the story on his Scum Report, took the position that it was bad
>behavior on the part of DJ or audience, and McGuirk added ``Arizona
>Morning Zoo.''
>
>He didn't offer sympathy to the woman nor did he have the position to do so;
>just commented on the demographics.

And that's basically what I've done. I only commented on YOUR
position. You don't know what she's going through...for that matter,
although I have experienced the loss of a very close relative in the
past year, neither do I. Your callous statement "oh, she should buck
up" is ridiculous. I would like to think that we in the media
industry should at very least have our own, self-defined "lines" about
what we do to get attention and ratings. Before you go off on a rant
there, I said *self-defined*, not regulated, etc.

>The popular line is clear enough. That's how the story has legs. It
>infantilizes the woman however, which you guys are very happy to do in
>support of your own self-satisfaction.

"Infantalizes" the woman? What kind of world do you live in, Ron?

In your world, are people allowed to grieve over their losses without
being characterized as being "weak"? Are people allowed to deal with

their losses without some "infantile" radio personality digging up their story for a quick ratings and publicity hit? What kind of world DO you live in, Mr. Hardin? Where is the decency in it, the mere respect for human feelings and loss? Or is everything "open season"?

Mike

3128. Limbaugh ratings?

Newsgroup: rec.radio.broadcasting

I received this the other day, and am posting here to explain my question, although it might be on topic for the group. :

Does anyone have any idea how Rush is doing ratings wise around the country?

--Jay Scott

Please read the content no matter what you think of Rush
Subject: FW: Interesting info from Rush
By Rush Limbaugh, March 11, 2002

I think the vast differences in compensation between the victims of the September 11th casualty, and those who die serving the country in uniform, are profound.

No one is really talking about it either because you just don't criticize anything having to do with September 11th. Well, I just can't let the numbers pass by because it says something really disturbing about the entitlement mentality of this country.

If you lost a family member in the September 11th attack, you're going to get an average of $1,185,000. The range is a minimum guarantee of $250,000, all the way up to $4.7 million.

If you are a surviving family member of an American soldier killed in action, the first check you get is a $6,000 direct death benefit, half of which is taxable. Next, you get $1,750 for burial costs. If you are the surviving spouse, you get $833 a month until you remarry. And there's a payment of $211 per month for each child under 18. When the child hits 18, those payments come to a screeching halt. Keep in mind that some of the people that are getting an average of $1.185 million up to $4.7 million are complaining that it's not enough.

We also learned over the weekend that some of the victims from the Oklahoma City bombing have started an organization asking for the same deal that the September 11th families are getting. In addition to that, some of the families of those bombed in the embassies are now asking for compensation as well. You see where this is going, don't you? Folks, this is part and parcel of over fifty years of entitlement politics in this country. It's just really sad.

"Patriotism is not a short and frenzied outburst of emotion but the tranquil and steady dedication of a lifetime." --Adlai E. Stevenson, Jr.

Every time when a pay raise comes up for the military they usually receive next to nothing of a raise. Now the green machine is in combat in the Middle East while their families have to survive on food stamps

and live in low rent housing.

However our own U.S. Congress just voted themselves a raise, and many of you don't know that they only have to be in Congress onetime to receive a pension that is more than $15,000 per month and most are now equal to be millionaires plus. They also do not receive Social Security on retirement because they didn't have to pay into the system.

If some of the military people stay in for 20 years and get out as an E-7 (Enlisted Sergeant equivalent) you may receive a pension of $1,000 per month, and the very people who placed you in harms way receive a pension of $15,000 per month. I would like to see our elected officials pick up a weapon and join ranks before they start cutting out benefits and lowering pay for our sons and daughters who are now fighting. Consider this.... Our Senators/Congressmen do not pay into Social Security, and, therefore they do not collect from it. Social Security benefits were not suitable for them. They felt they should have a special plan.

Many years ago they voted in their benefit plan. In more recent years, no congress person has felt the need to change it. After all, it is a great plan. For all practical purposes, their plan works like this: When they retire no matter how long they have been in office, they continue to draw their same pay until they die, except it may be increased from time to time by the cost-of-living adjustments. For example, former Senator Bill Bradley (New Jersey) and his wife may be expected to draw $7,900,000.00 over an average life span,with Mrs. Bradley drawing $275,000.00 during the last year of her life. Their cost for this excellent plan is "0," nada, zilch.

This little perk they voted in for themselves is free to them. You and I pick up the tab for this plan. Our tax dollars at work! Social Security, which you and I pay into every payday for our own retirement, with an equal amount matched by our employer, we can expect to get an average of $1,000 per month. Or, we would have to collect our benefits for 68 years and 1 month to equal the Bradley's benefits.

Imagine for a moment that you could structure a retirement plan so desirable, a retirement plan that worked so well, that Railroad Employees, Postal Workers, and others who were not in the plan would clamor to be included. This is how good Social Security could be, if only one small change was made. That change would be to jerk the Golden Fleece Retirement Plan out from under the Senators/Congressmen. Put them into the Social Security plan with the rest of us. Watch how fast they fix it!!!

If enough people receive this maybe a seed will be planted, and maybe good changes will evolve.

Don't forget, our girl, Hillary Rodham Clinton, thanks to the infinite wisdom of New York State voters, now comes under this Congressional Retirement Plan. Talking about the Clinton's, it's common knowledge

that, in order for her to establish NYS residency, they purchased a million + house in upscale Chappaqua, NY. Makes sense. Now, they are entitled to Secret Service protection for life. Still makes sense. Here is where it becomes interesting. A residency had to be built in order to house the Secret Service agents. The Clinton's now charge the Secret Service rent for the use of said
residence and that rent is just about equal to their mortgage payment, meaning that we, the tax payers, are paying the Clinton's mortgage and it's all perfectly legal.

How many people can YOU send this to ...

Screw what up? The quantity of the audience? The quality of the
audience? Do you honestly believe that a customer (sponsor) who objects
to tastelessness will damage either?

Are you countering my assertion that programming is influenced to a
significant degree by advertisers, or simply attempting to pass a value
judgment on it?

I am amused that in many cases, some of the smallest stations in the
smallest markets have the most impressive tower structures. Sutro tower
in San Francisco is an exception to this rule, but generally the largest
stations for whom I have done work are simple antenna mounts on masts on
top of high-rise buildings, or short towers on mountain tops. On the
other hand, some rather small-time stations end up on these impressive
multi-hundred meter sticks.

Amateur Radio Newsline™ Report 1314 – October 18, 2002

Amateur Radio Newsline report number 1314 with a release date of Friday, October 18th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC tells ham radio its not going to have to share 2300 Mhz. This story is first on Amateur Radio Newsline report number 1314 coming your way right now.

(Billboard Cart Here)

**

SPECTRUM ISSUES: FCC SAYS NO TO 2300 MHZ SHARING

First the bad news. The FCC has dismissed an ARRL petition that sought primary status for amateurs in the 2300 to 2305 MHz. Now the good news. The Commission has also turned down a paior of petitions from commercial interests that had hoped to share the spectrum with Amateur Radio. Amateur Radio Newsline’s David Black, KB4KCH has more:

--
It's not just ARRL that the FCC turns down. The Commission also dismissed petitions from MicroTrax and AeroAstro--both groups had sought access to 2300 to 2305 MHz. The FCC says it's denying the two commercial applications in part because appropriate spectrum is already available elsewhere. And, according to the Commission, neither company had demonstrated a need for additional spectrum.

By way of background, an ARRL bulletin says that MicroTrax had wanted to establish a Personal Location and Monitoring Service between 2300 and 2305 MHz. The petition by AeroAstro asked to share the band on a co-primary basis with Amateur Radio. AeroAstro wanted to launch its Satellite Enabled Notification System messaging service.

But the Commission says AeroAstro's request did not go far enough in protecting other serevices. The agency was particularly concerned that NASA's Deep Space Network would not be protected by the modified out-of-band limits AeroAstro had proposed.

The FCC says that -- at least for now -- amateur weak-signal communications in the 2300 to 2305 MHz band will be protected if the amateur allocation remains as secondary. The Commission says band will remain in its spectrum reserve. The status quo will be maintained, then, until the FCC re-evaluates the status of the frequencies in relation to the Amateur Service at some point in the future.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.
--

The 2300 to 2305 MHz band is allocated to Fixed and Mobile services on a primary basis and to the Amateur Service on a secondary basis in all three International Telecommunication Union regions. The Radiolocation Service has a secondary allocation in the band in Region 1, and a primary allocation in Regions 2 and 3. (ARRL)

**

RESTRUCTURING: NETHERLANDS MAY SAY GOODBYE TO MORSE TESTS

Im Bill Pasternak, WA6ITF, with some late breaking news. It comes from the Netherlands where the Morse code could soon be going away. RSGB News reader Jeramy Boot, G4NJG, has the details:

--
The Netherlands is set to abandon the Morse code test next year. Rob van den Ent, PE9PE, reports that the Netherlands' national amateur radio convention took place the 12th and 13th of October. He says that the Dutch radio regulatory authority used the occasion to announce that if, as expected, Morse code is lifted as a mandatory requirement for an HF licence at nextyear's World Radio Conference, the authority would immediately eliminate the Morse code test in the Netherlands. At the same time, current VHF licensees would get direct access to the HF bands without further examinations.

--
More on this story in future Amateur Radio Newsline reports. (GB2RS)

**

RADIO REGULATIONS: BIG CHANGE AT THE ITU RADIOCOMUNICATION BUREAU

Ham radio has lost an significant post in the area of setting world radio policy. This, as a non radio amateur is selected to head up an important aspect of the International Telecommunications Union. From Brisbane Australia, Q-News Graham Kemp, VK4BB, has the details:

--
Valery Timofeev has been elected director of the International Telecommunication Union -- ITU -- Radiocommunication Bureau. Timofeev, who is Russia's deputy minister for communications and informatization, has extensive experience in radio frequency spectrum management at both the national and international levels.

Timofeev's election does mean for the first time in at least three decades, an non-Amateur Radio licensee will head the ITU Radiocommunication Bureau. The election took place during the 6th ITU Plenipotentiary Conference now under way in Marrakesh, Morocco. The meeting concludes October 18th.

>From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.
--

The political signifigance of this change is obvious. Having a ham radio operator in this position gave the service considerable leverage in negociations involving spectrum issues. (Q-News)

**

RADIO REGULATIONS: HAM RADIO GAINS OBSERVER STATUS AT THE IARU

The International Amateur Radio Union now has observer status at ITU meetings. IARU President Larry Price, W4RA, was on hand to represent the organization at at a major ITU gathering which was held in Marrakesh Morroco in late September. And Region 2 Executive Committee member Tim Ellam, VE6SH, is now participating on behalf of the organization. (Q-News)

**

THE WAR ON TERROR: COMMUNICATIONS STANDARDS ADOPTED

Back here in the United States, the communication industry has adopted emergency procedures intended to help maintain the nation's telephone, cable and Internet networks in case of a natural disaster or terrorist attack. The procedures were developed by a council of more than 50 industry officials formed by the Federal Communications Commission in January.

The group adopting the standards is called the Network Reliability and Interoperability Council. Their job was to recommend ways to strengthen communications networks to resist attack. The plan all have now agreed to will help companies in a crisis contact and work with partner firms to keep services running. (NRIC)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the AA4ED repeater serving Broward Ounty Florida.

(5 sec pause here)

**

ON THE AIR: IRLP NODES TO GET AN EXTRA DIDGIT

Changes are in the air for those of you involved in internet radio linking. This, to permit an increase the number of possible I-R-L-P nodes to over 99 000.

Right now most I-R-L-P users will not notice any difference. Eventually IRLP node codes will increase from three numbers to four. The result is that node 640, for example, will become 6400. (G6PHF/Bass IRLP Group via APC News)

**

ENFORCEMENT: FOUR LICENSES CANCELLED IN EXAM INVESTIGATION

Turning to enforcement news, a group radio amateurs who did not show up for a retest are no longer membewrs of the ham fraternity. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “As a result of an audit by the Enforcement Bureau of the September 1st 2001 examination session given in Yucaipa California by the W5YI VEC, the Wireless Telecommunications Bureau has cancelled the licenses of four who did not appear for a retest. Those are Technician Camito E. Lopez KG6GJG and General class licensees Marcileno Llanes KG6HBR, Manual Vega KG6GSP and Marcial Rivas KG6HCP.
--

Duckworth says that the investigation into the exam session continues. (FCC, RAIN)

**

ENFORCEMENT: KENYAN PIRATES OFF THE AIR

Still in the enforcement arena, ham radio in Nairobi Kenya have gotten some relief from illegal operators. Kenyan Intruder Watch Coordinator Ted Alleyne reports that five High Frequency stations have been confiscated. Also, the operators of a Nairobi travel agency that was using 2 meter amateur frequencies were caught and equipment has been siezed. (Q-News)

**

ENFORCEMENT: IRANIAN JAMMER UPDATE

The 40 meter Iranian jammers we recently reported on are still being heard. Intruder Watch Regional Coordinator Martin Potter says that the jamming is being done to a low power station called Radio Mujahed. It’s being head in 10 Kilohertz steps from 7 point 010 to 7 point 090 Mhz. Potter says that S-W-L’s may find the same situation in the broadcasting frequencies as well. (Q-News)

**

NAMES IN THE NEWS: FCC CHAIRMAN POWELL COMMENTS ON MEDIA OWNERSHIP

Some names in the news. First is FCC chairman Michael Powell. He has warned that rules on media ownership will probably be struck down by the courts if they aren't modified to account for sweeping changes in the media landscape over the past 30 years. Powell's comments came shortly after the FCC released the results of studies suggesting that many ownership rules are outdated. The studies mark the foundation of the FCC's review of key rules on media ownership. (ComOnline)

**

NAMES IN THE NEWS: CULTURAL RESOURCE SPECIALIST NAMED

The C-G-C Communicator reports that Dr. Amos J. Loveday, Jr. has been appointed as the "Cultural Resource Specialist" in the F-C-C’s Wireless Telecommunications Bureau's Commercial Wireless Division. His job will be to

insure that tower and antenna siting projects comply with the requirements of the National Historic Preservation Act of 1966. He will also assist the FCC in establishing a closer working relationship with Native American Tribes and Native Hawaiian Organizations. (CGC Communicator)

**

NAMES IN THE NEWS: KB5HAV APPOINTED ASST MGR OF HURRICANE WATCH NET

Bobby Graves, KB5HAV, of Pearl, Mississippi, has been named as the Assistant Manager of the Hurricane Watch Net. According to the ARRL Letter, Graves appointment was announced by Mike Pilgrim, K5MP, who is Manager of the net. More information is on the web at www.hwn.org (ARRL)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

RESCUE RADIO: AOL SIGNS ONTO AMBER ALERET SYSTEM

The worlds largest Internet service, America Online, says that it will soon begin transmitting Amber Alerts. The service says that the alerts about abducted children will show up on the screens of computers, pagers and cell phones of more than 26 million of its subscribers in dozens of states and cities beginning in early November. Warnings issued by most communities that use the system will go to AOL users in those areas who request to receive them. All but one of the existing Amber Alert systems are participating in the America Online project. (AoL)

**

EMERGING TECHNOLOGY: X-RAY EYES

If you thought only cartoon super-heros like Superman could see through walls to detect the villains, guess again. New technology called ultra-wideband will soon allow mere mortals to detect objects buried underground and to build cars enhanced with sensors that help avoid collisions.

According to press reports, ultra-wideband uses millions of narrow pulses each second to get an accurate reading of location and distance, opening the door for new applications in radar tracking, precise positioning and wireless communications. The possibilities vary from short-range computer networking for homes to devices that determine the location of golfers on a course.

What regulators like even better is that ultra-wideband devices can work within frequencies already allocated for other radio services -- helping to maximize this dwindling resource. The Federal Communications Commission believes the technology is so promising that the agency has proposed allowing it to be used on an unlicensed basis.

But it may be a while before the new technology is available. First, government agencies and private groups are testing to make sure ultra-wideband can safely coexist with other services, like the Global Positioning System. More information is on the Ultra-wideband working group website at www.uwb.org (Science Today)

HAM RADIO IN SPACE: PCSAT - HELP NEEDED TO BUILD A NEW BIRD

Bob Bruninga, WB4APR, of the P-C-sat Project Team has put out a call for an antenna designer for the next generation of this type of ham satellite. According to Bruninga, to get a free ride to orbit for P-C-Sat the satellite must fit inside of a perfectly spherical but totally passive mirror surfaced 18 inch diameter ball. Also, the antenna must be totally internal with no external protrusions.

To make it happen, the P-C-Sat team at the US Naval Academy Satellite Lab, needs a good RF designer and antenna modeler to help out. If you can help, please contat Bob Bruninga by e-mail to wb4apr@amsat.org. P-C-Sat is scheduled for launch in less than a year. (AMSAT BB)

RADIO IN SPACE: GOVERNMENT CONTRACTS FOR NREW WESATS

The government has selexcted TRW Space and Electronics to build the fleet of next generation weather satellites. The Redondo Beach California unit of Cleveland Ohio based company will build two satellites with options for up to four more.

Eventually six new polar-orbiting satellites will collect data on the Earth's weather and climate, as well as its land, oceans and atmosphere. The birds will go into orbit between 2009 and 2018. The contract to build the new weather satellites is worth up to $4.5 billion dollars. And that’s billion – with a B. (Published reports)

INTERNATIONAL – AUSTRALIA: THE CB MOUNTAIN CHALLENGE

Turning to the international pages, C-B operators in Australia are about to embark on what is best described as a cross between an emergency training operation and a contest. Its called the Mountain Challenge where the object is to accurately pass a message around the state of Victoria using C-B radio.

It will all take place on Saturday the 30th of November. Both 27 MHz and U-H-F C-B radio is used to get the message through. And this year the event will extend beyond Victoria, with C-B’ers in Mount Gambier and Tasmania having expressed interest in taking part.

Find this interesting? Want to learn more? Well you can – on the web at www.mrc.cat.net.au. (Q-News)

**

INTERNATIONAL - AFGHANASTAN: KANDAHAR GETS TV

A new television station in Kandahar Afghanastan is being called a resounding success. This even though the signal is so poor the Afghan musicians shown in the first broadcast looked like grainy, quivering ghosts. According to Abdul Ali who heads up broadcasting in Kandahar, all of the equipment is than 20 years old and had not been used at all during the years that the Taliban ruled the country. (Media Network)

**

INTERNATIONAL - CANADA: VE3CT WLECTED QCWA PRESIDENT

For the first time in the history of the Quarter Century Wireless Association a Canadian radio amateur has been elected as its president. Croft Taylor VE3CT , who previously served as vice president, assumed office on September 1st and will serve a two year term. The QCWA was founded in 1947. You can learn more at www.qcwa.org (RAC)

**

DX

In D-X, A group of five American operators will be active using ZK1 callsigns from Manihiki in the remote North Cook Island group through the 31st of October. They will be active on 6 to 160 metres on CW, SSB and RTTY. During the CQ World Wide SSB Contest on the 26th and 27th of October they will use the callsign of ZK1MA. (GB2RS)

9V1SM is Sasi, a new operator from Singapore. He is active on all bands from 40 to 6 metres, mainly on SSB. He also plans to start PSK-31 operation in a few week's time. (RSGB)

Lastly, the new address for the ARRL W 5 Incoming QSL
Bureau is O.K.D.X.A, PO Box 2591, Claremore, Oklahoma 74017-2591. If you have cards for W-5 land, send them there. (ARRL)

THAT FINAL ITEM:

WITH THE SCOUTS: JOTA THIS WEEKEND

This weekend, the 19th and 20th of October, is the scouts Jamboree on the Air, or JOTA. Bruce Tennant, K6PZW, tells us what its all about:

--
The Jamboree on the Air is an annual event. Every October a half a million Scouts and Scout Guides all over the world take to the airwaves to make contact with each other by means of Amateur Radio.

The World Scout Bureau owns and operates its own Amateur Radio station. The the call sign H-B-9-S and it operates from a permanent radio room located in its offices in Geneva Switzerland. The station normally operates during Scout Nets and other major scouting events like the Jamboree On The Air. This year, the station is active on 160 through 10 meters in a number of languages.

Here in the United States, the big JOTA gathering takes place at Camp Wisdom near Dallas, Texas. The call sign to listen for from there is K2BSA slash 5. Other stations expected to take part include GB2GP in London England and JA1YSS from Tokyo Japan.

If you are hearing this newscast before or during this years Jamboree on the Air, get on the air and show your support of the worlds youth and of scouting by making contact with a J-O-T-A station. Who knows, it could evenb be HB9S.

For the Amateur Radio Newsline, I’m Bruce Tennent, K6PZW, in Los Angeles.
--

Again, this weekend, the 19th and 20th of October, is the 2002 Scouting Jamboree on the Air. And if you are hearing this newscast later in the week we hope you had time to contact a Jamboree station. (ARNewsline™, Q-News, GB2RS)

I have a ham friend up in Toronto who's ask me to try and fill him in on the low power HF operators in Canada.

He asks:

CFRB in Toronto used to have an outlet on 6070 but have not heard it in some years. A Montreal station also had one, CFCF but it has been gone for years. Tell me a bit more, I am well plugged in to what goes on here and HF outlets at low power is a totally new thing to me.....
Tell me a bit more.....

I wonder if anyone here on the ng can enlighten both of us?

Are such licences still offered or were they an optional extra with a new AM/MW licence?

Is there a website with more info on these from the authority's perspective rather than the DX'ers?

Thanks.

Many Canadian commercial stations had Shortwave licenses in the past., mostly to serve the northern parts of the country before satellite and microwave extended service to that area.
They were additional licenses granted by the CRTC and it's forerunners and usually duplicated the station's AM programming.
The CBC still operates an international service on Shortwave but most of the others, CFRB Toronto, CFCF, Montreal and CJCA Edmonton are long gone. Even CJCA AM is gone.
There were others as well but my memory isn't clear on these.
Hope this helps.

This question was also posted and answered in the rec.radio.shortwave
newsgroup. I don't know the details of the history and licensing of
these stations, but I can report that I have heard CFRX 6070 (relaying
CFRB) and also the CBC outlet in Newfoundland on 6160 as recently as
this summer. I find they're best heard after 0700 UTC.

3136. Somebody digital on 670 or 1220?

Newsgroup: rec.radio.broadcasting
Date: 2002-10-22 01:53:04 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <ap2b20qkc1@xuxa.iecc.com>
Source record: 9548

Tonight just before sunset in Ohio there was _strong_ digital-sounding
hash on the upper sidebands of 660 kHz and 1210 kHz; I'm guessing
something Chicago-area on 670 and 1220 IBOC? I should have checked
680 LSB, which would be an almost open channel, but failed to do so.

Nulling WFAN NYC 660 and WPHT 1210 Philly did not null the hash, so
it's coming from some other direction. The lower sidebands were clear.

Things are going to get pretty grim if this is what it is, digital from
the sunward direction contaminating the nightward direction.

My filters were probably catching 660-663 kHz and 1210-1213 kHz signals.

Hey Old Time Radio Fans!

I wanted to let you all know that my "War of the Worlds" radio documentary will be airing on about 40 radio stations over the next two weeks.

"We Take You Now to Grover's Mill" (29:40) A radio documentary of the making if the "War of the Worlds" broadcast, which features my interviews with John Houseman, Howard Koch, Arthur Anderson and townspeople of Grover's Mill who where around at the time of the 1938 broadcast. I interviewed John Houseman only weeks before his death (on the 50th anniversary of the infamous Orson Welles broadcast). It turned out to be the last interview Mr. Houseman ever gave.

The Associate Producer of "We Take You Now to Grover's Mill" was Thomas Babkowski.

I do not have a schedule for each station running the show. I do know it will be broadcast in the New York City area on WNYC, AM820, on Sunday, October 27th, at 9:00 pm (Eastern time).

If you do not live in the New York area and a station in your area is not carrying the show, you can hear it online at:

http://www.wnyc.org/asx/wnycam.asx

Hope you like it!

Joe Bevilacqua

PS:

I've also put a few CDs of the show up on eBay if you want your own copy:

http://cgi6.ebay.com/ws/eBayISAPI.dll?ViewSellersOtherItems&userid=bevil2&include=0&since=-1&sort=3&rows=25

Source record: 9547

John Higdon <no-spam@amadeus.kome.com> wrote:

"Screw what up? The quantity of the audience? The quality of the audience? Do you honestly believe that a customer (sponsor) who objects to tastelessness will damage either?"

In fairness, there have been some extreme examples of advertisers' meddling over unbelievably trivial things. One was the famous incident where the American Gas Association, sponsoring a drama about the Nuremburg war crimes trials, demanded that all mentions of gas be bleeped out. Another was when "What's My Line" was sponsored by Marlboro, and the ad agency rep objected to a reference to the Israeli parliament -- since Parliament was a competing brand. Still another case was when another agency rep objected to a reference to someone being "at the zenith of his career," since the show was sponsored by Philco.

But my gut feeling is that, when advertisers raise hell over content, they usually have a good reason for not wanting to be associated with something that would offend their customers.

In article <aovili$hvu$1@xuxa.iecc.com>,
"David Eduardo" <amdavid@pacbell.net> wrote:

> The product is radio programming. The audience is the consumer.

The product is the audience. It is delivered to the customer, who is the
advertiser. The programming (which frequently isn't even produced by the
station at all), is simply a device utilized to deliver the product to
the consumer.

> Since radio has a bimodal marketing model, there is a second consumer who
> buys the product because of the audience. So, to an advertiser, the product
> is the audience attracted by the programming. To the listener, it is simply
> the programming.

The audience is not doing business with the radio station. The audience
does not pay the station any money. The station has no interest in the
audience except as product to sell to its customers, who are the
advertisers.

Mike Ward wrote:
> Mr. Hardin, you have absolutely no idea what that woman, the widow of
> the baseball player, is going through.

Yes, I know what a widow is, thanks.

Try reversing the sexes. Some woman DJ calls a _guy_ and offers to take
him to the game.

Guys can take care of themselves. Women can't, according to you. The world
is too tough for them.

But if I think of an actual woman (you must know one or two, try it) they all
know what to do with such a call.

The bit is not to offend her but to offend you and bluenoses like you.
That's what appeals to the demo it's aimed at. You can take it as feminist
in that respect: women are not idiots.

I don't happen to think it's a good bit, but at least analyze it correctly.

The station caved, of course. Lots of canaries are dying in the mines nowadays,
test cases that were protecting programs that you yourself like, perhaps.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

No, actually. To account for, for example, news coverage, you have to realize that the product is audience, not programming. ``Tornado danger, can it happen here? Tune in at six.'' Or hyping upcoming coverage of the last press release the news department got from anybody.

Dear Neal:

Thanks for the email. I got a chuckle as my last job in radio was CE for a 5 KW AM in NYC! Hi!

Perhaps you wear "other" broadcast hat. I once was Station Mgr/CE for an AM/FM in Colorado and really enjoyed it tho I normally stick to engineering.

I will be visiting the Idaho station in the next few weeks. It is KIGO in St. Anthony, ID. 1400 KHz class "C" AM 1 KW fulltime. On the air since 1966.

Total asking price is $60,000 and the seller wants $10,000 ernest money to lock up the deal.

How would you feel about living in a single station maket with 3400 in the city of license. Almost 5,000 ft. above mean sea level?

I am a 67 year old semi-retired broadcast engineer. Ham since 1950. FCC commercial ticket since 1951. Was the past President and founder of noncommercial KPOO(FM), San Francisco. It is on since 1973. Presently I live in Macon, GA

3154. IBOC on AM?

Newsgroup: rec.radio.broadcasting
Date: 2002-10-22 11:51:31 UTC
From: Jim Burgan <jim@burgan.net>
Message-ID: <ap3e43hih1@xuxa.iecc.com>
Source record: 9366

I read an article in the Indianapolis Star about the wonderfulness of IBOC. Most of their material came from the engineers at Emmis (which owns a stake Ibiquity), but their exact words were; "AM Radio will sound like FM Stereo and FM will sound like CD's.".
This is contrary to what I am hearing on this (and other) Usenet groups. I have read Brad Jackson's comments on this forum and have found them to be interesting and (probably) accurate.
However, I wonder where Emmis has come to the conclusion that AM will be so great and FM will be better than sliced bread.
Also... Perhaps I have missed something, but I noticed that the FCC has approved IBOC for use on AM during daytime hours only. Does that mean that at sunset, all AM's (even the 50kw blowtorches like WABC, WLS, WRVA, WSM etc) will have to cut the digital signals?
Is there any future for IBOC on AM if they gotta kill it at 4:15 PM (legal sunset in Chicago in December)?
-Color me curious-

I don't think this is an accurate reference sine "What's My Line" was sponsored by Geritol during it's entire CBS Sunday Night network run (hosted by John Daily, it began on Feb. 16th, 1950 and the final episode aired on Sept. 3, 1967, making it the longest running prime-time game show in the history of television).
The syndicated version hosted by Wally Bruner began in 1968, at which time cigarette commercials had been banned.
You may have it confused with another show, perhaps "I've Got A Secret"?
I know it has nothing to do with your point, which is interesting and I am sure factual, but it couldn't have been "What's My Line".

The stereo subchannel is AM, whereas SCA's are FM. I suspect they'll
be less susceptible, assuming equal levels of noise in both parts of the
baseband.

If IBOC interferes with FM stereo, it's dead in the water, I think.

That's all I'm talking about here. An advertiser has the right to be
associated (or not) with content that he feels would be influential over
an audience with respect to the product. Right or wrong, the advertiser
is writing the check.

If Orchard Supply Hardware does not want to be associated (by name) with
tasteless discussions on how to commit crimes of kidnapping, then it has
every right to discontinue its sponsorship on a station. To then call
the station management "morons" because, in the end, they agreed with
the sponsor and took remedial action, is itself reactionary.

Note that this is in contrast with the St. Patricks Cathedral incident
where the advertiser was present and encouraging during the programming
in question, but then recanted his approval when the excrement hit the
fan.

Somehow I have more respect for the hardware store chain than I do for
the brewery.

Two things to consider:

The modulation index of the SCA subacrriers is low, so you don't get much
"FM improvement".

The SCA carriers are at higher main-channel modulation frequencies than the
stereo content so they are closer to the IBOC content.

If it's not whether or not she can take the stress, then I don't see what
you're objecting to; or how you think it gets ratings, unless it through
it's offending people like you, which the audience presumably un-identifies
with, being young, I'm guessing.

The only _interest_ is from the morally superior faction, and it's intense.
It says something about the American moralist tribe, that this is what
they are moved to complain about. The point of the stunt is to provoke
that complaint.

Ask why anybody would want to offend you.

It is, to be charitable, a wildly inaccurate assertion. IBOC makes AM
sound like bad streaming audio on a slow internet connection, and
makes FM sound like low-bit-rate MP3's. My own listening finds the AM
IBOC intolerable. The FM would probably be accepted by most consumers
if they didn't have anything with which to directly compare it.

>However, I wonder where Emmis has come to the conclusion that AM will be so

3164. 710 WOR: Digital vs. Analog

Newsgroup: rec.radio.broadcasting
Date: 2002-10-22 18:28:20 UTC
From: wbrw@radiomailbox.com
Message-ID: <ap45c4$2u4$1@xuxa.iecc.com>
Source record: 9378

Since 710 WOR has posted a sample recording of how their "HD Radio"
(a.k.a. IBOC) digital audio sounds, I took the opportunity to compare
it to the regular analog AM audio that WOR used to transmit with full
NRSC bandwidth prior to the use of IBOC. You can listen and decide
for yourself which one sounds better.

First, WOR's sample recording of their HD Radio digital audio, from
the iBiquity test receiver (October 2002):
http://www.wor710.com/Engineering/iboc/dolans_digital.wav

Now, here's what they sounded like on a $29.99 Sony SRF-42 Walkman
back in 1997:
http://rvcc2.raritanval.edu/ktek9053/wor-hifi.mp3

To my ears, the HD Radio digital audio sounds remarkably similar to a
20 kbps RealAudio "web-cast" -- there is a little extra high end, but
the overall audio is so filled with digital "artifacts" (a
wishy-washy, chattery, "congested",
"underwater" type sound) that the clean, natural sound of analog AM is
highly preferable, even with a narrower audio response (in this case,
the Sony uses a 6 kHz ceramic filter).

It's true, they are morons. There's even a simple explanation for it,
called the Peter Principle. You're promoted until you reach a spot
where you're incompetent.

The NYSE had an ad on Imus announcing the transition to 24-hour trading,
so Imus adds to it ``Now what does this mean if you're a coke dealer?
It means great business for you. Traders are going to need more than
coffee.''

The NYSE did not cancel the sponsorship, getting the reputation of being
good sports, in a frame that's wider than ad-in-a-radio-show, namely in
real life.

Orchard Supply, on the other hand, is I hear associated with Sears,
which no matter what you buy want to sell you a service contract on it,
and is populated top to bottom with Peter Principle personel as well as old
prunes.

How do I know this, there being not a single Orchard Supply near me?
>From their complaint about the DJ.

That's why they're morons, and the radio station as well.

[Moderator's note: The PP is actually something along the lines of "Each
person rises to his own level of competence within the company", iow the
more incompetent you are, the higher you go.]

> baseband.

Actually, the stereo information is double-sideband, suppressed carrier.
It is very delicate in that the slightest amount of interference from
any source reduces stereo separation. Noise in the stereo subcarrier
will manifest itself in both channels, 180 degrees out of phase. The
SCAs, on the other hand, are vulnerable due to their small bandwidth and
proximity to the edge of the band.

> If IBOC interferes with FM stereo, it's dead in the water, I think.

Or, it will accelerate the day when we drop hybrid mode.

Hi John,

I went back to see exactly what your original claim about "envelope" detectors and CQUAM single channel modulation was, and found the following:

"Such a case (one channel only being broadcast in stereo mode, pilot on or off) would have a very detrimental effect on many monaural radios. It would appear to the radio's envelope detector as extremely heavy IQM and the listener would be subject to very fatiguing distortion. Only synchronous and compensated envelope detectors would be able to handle this "one channel only" condition with any grace. Cheap radios would sound like crap."

I hesitate to point out that an ordinary monaural "synchronous detector" will not deal at all gracefully with a CQUAM signal, with modulation on one channel only, distortion will result, worse distortion than with an envelope detector.

I am not familiar with the "compensated envelope detector" you mention, can you explain what that is?

I am not disputing your statement that single channel modulation of a CQUAM system will have a detrimental effect relative to a simple monophonic AM signal. What I disagree with is your blaming this effect on "envelope detectors", and claiming that it does not also affect stereo radios.

In article <aosmug$s0o$1@xuxa.iecc.com>, John Higdon <no-spam@amadeus.kome.com> wrote:

> In article <aop14b$hq9$1@xuxa.iecc.com>,

> phase shifting carrier. A cheap stereo radio (in stereo mode) will deal
> with the "one channel-only" distortion much better than a cheap mono
> radio.

Is it fair to characterize that statement as saying that the distortion will be significantly greater on a monophonic radio, than on a stereo radio, when the radios are otherwise identical as far as IF and audio response, the only difference between the two radios being that the

monophonic radio uses an envelope detector for demodulation, while the stereo radio uses some sort of stereo demodulator IC? With respect to the stereo demodulator IC, in your experience does it make any difference if the stereo demodulator IC is 1980's technology vs. some sort of newer 1990's technology? In other words, do older CQUAM stereo radios, as well as the latest models, handle single channel signals about equally well in your experience?

With respect to the "distortion caused by phase shifting carrier", what makes the ordinary "synchronous detector" you mentioned in your original post immune to this distortion effect?

> As for the rest of your reiterations, I'm not going to argue theory that
> pics nits with grossly evident reality. My original point that a stereo
> station broadcasting one channel only in stereo mode produces noticibly
> inferior audio on a typical mono radio than does a standard mono signal
> stands.

No, I don't have any problem with that statement, but that wasn't what you originally said. Your original statement, as quoted above, blamed the envelope detector for the problem, whereas I believe the actual problem is elsewhere in the radio.

> If you are in town some time, I'll be happy to demonstrate it for you.

OK, I will keep your invitation in mind, it sounds interesting, I might even bring a couple of radios, to help pin down where the real problem is. How do you propose demonstrating this effect, on an actual station, or with a signal generator or CQUAM exciter? I assume that in addition to the single channel modulation, the demonstration would include both the "pilot" on, and the "pilot" off cases?

Can you identify any of the radios you have observed this problem in, as well as the stereo radios that didn't have the problem? It would be interesting to see if there are any patterns.

> How do I know this, there being not a single Orchard Supply near me?

That is a good question. You neither heard the radio program nor do you
have a clue regarding the nature of Orchard Supply Hardware, its origins
and history as a thriving business and a community corporate citizen or
even how it is currently run, despite ownership by Sears. Yet you have
immutable opinions about everything involved.

I guess there is no point in discussing anything with someone who is
fully ignorant of any of the facts surrounding an event and who would be
unwilling even to factor them into his arguments if by some chance he
should learn them.

> That's why they're morons, and the radio station as well.

I'm sure both are too busy taking profits to the bank to be offended by
your remarks.

And by all means, never let facts or reality get in your way.

One does not have to be ignorant, crude, rude, or a boor to either think
young or even be young.

> The only _interest_ is from the morally superior faction, and it's intense.
> It says something about the American moralist tribe, that this is what
> they are moved to complain about. The point of the stunt is to provoke
> that complaint.

This is over the edge. i put no stock in people who take offense at
anything and everything that comes along. Individuals and groups who
dissect every phrase and every word spoken on the radio for the purpose
of finding something by which to be offended can kiss my posterior and
that of the radio station I work for.

But when someone on the radio does something for the SOLE purpose of
offending people (no humor, no drama, no art...just being offensive),
then he deserves what he gets...be it fired, suspended, docked,
whatever. It has nothing to do with morality, it has to do with common
business sense.

> Ask why anybody would want to offend you.

It is very, very difficult to "offend" me. Someone simply wanting to do
that isn't nearly enough.

Is there a way to search all radio station playlists at once?

I'd like to be able to ask "who's playing Vivaldi right NOW?" and get a list of radio stations with links to their web-streams; or to ask "when will a Haydn symphony be played, where?" and get a list of stations along with the scheduled time.

> the Sony uses a 6 kHz ceramic filter).

Exactly my impression. To my ears, most of the product of high-tech,
low-bitrate codecs is an undesirable tradeoff. It is the trading of
limited frequency response and relatively high noise floor for a "busy"
and unfulfilling mechanical sound of digital "ear-foolery". In my
opinion, it isn't worth the trade.

Remember, the hook for broadcasters isn't the audio quality, it is the
"RBDS on stearoids" that is being hyped by iBiquity and Impulse Radio.
This data, which is essentially banner advertising for radio stations,
is supposed to be the savior of radio broadcasting.

Whatever. I have simply observed that some radios, typically more
expensive ones, are much less affected than others, typically cheap
ones. I simply attributed it to detector design.

>This is contrary to what I am hearing on this (and other) Usenet groups.

It is, to be charitable, a wildly inaccurate assertion. IBOC makes AM sound like bad streaming audio on a slow internet connection, and makes FM sound like low-bit-rate MP3's. My own listening finds the AM IBOC intolerable. The FM would probably be accepted by most consumers if they didn't have anything with which to directly compare it. But it is NOT CD quality--not even close. In fact, a direct A-B comparison shows it's obviously inferior to analog FM. The only advantage it offers is datacasting.

>However, I wonder where Emmis has come to the conclusion that AM will be so
>great and FM will be better than sliced bread.

I am amazed by the amount of self-deception in which major radio executives are indulging over this issue, apparently because they see revenue potential in being able to send out a data stream. IMHO it would not be a good idea to trash a successful business for an unproven one that faces even more competition and weak demand (how much dark fiber is in the ground these days, fellas?)

>Also... Perhaps I have missed something, but I noticed that the FCC has
>approved IBOC for use on AM during daytime hours only. Does that mean that

>sunset in Chicago in December)?

If ever a technology was not ready for the market, this is it. What is the point of putting an inferior product on the air, degrading your existing analog signal, and splattering interference onto adjacent channels? I don't get it!

Try listening to 1180 WHAM at night here too, covered with digital hash.
Listen to WCHB on a GOOD AM receiver, the 5KHz bandwidth AM signal has quite
a bit of digital noise too. Would be interesting if WTAM, 1100, Cleveland
went IBOC, they put a decent signal into the Detroit area and there is a
first adjacent station (1090) here too.

I'd think using RBDS for performer / composition to compete with the satcasters would be a more effective use - but what do I know... OK, display advertiser info during commercials. I haven't figured out a useful application for talk radio.

I'm seeing Stopette in the ones running now (on Black & White Overnight). ISTR some joke from some early-50s TV show (which I only heard on an album) about somebody who drank a bottle of Stopette and "'poof'-ed himself to death!" :-)

"..."I've Got a Secret" was sponsored in its earlier years by Winston, not Marlboro..."

I found the reference to this incident ("The Box" by Jeff Kisseloff, page 521), and the show turned out to be "To Tell The Truth." I've seen episodes of that on Game Show Network with plenty of Marlboro identification visible. AFAIK (though I'm no lawyer), it's not a violation of the ad ban to show these programs with the branding still visible *if* they are not being compensated for showing it in that manner. The same exception allows cigarette commercials -- not just pre-1971 ones, but commercials produced for showing in other countries or in other media -- to be shown, even in full, in documentaries and similar situations; it's not considered advertising if there's no payment for showing the ad.

I also was trying to hear WHAM when a few months ago I started hearing
the IBOC stuff spewing either side of 1200. An IBOC WTAM 1100 could put
a hurt on Catholic broadcaster WCAR 1190's nighttime peanut whistle
signal.
I think here in Detroit we're on a tiny null of WTAM, as there is pretty
consistent selective fade regardless of season. The local papers here of
course were covering the iBiquity IBOC pitch to the Convergence auto
electronics convention going on here this week. Basic propaganda
message- it's digital, so it's just got to be better. Feh.
Lots of local discussion of this on the Michigan Radio-TV Buzzboard site.

I find it interesting that the US is going IBOC for terrestrial digital radio when the rest of the world is using the Eureka 147 system.
The sound quality of Eureka 147 is vastly superior to IBOC and it offers the possibility of many more services besides superior audio.
I realize the official US response is that the frequencies used for digital radio around the world are assigned to the US Military.
Incidentally, digital radio has been availiable for several years in Canada's major markets, Toronto, Montreal, Vancouver, Windsor, coming soon in Ottawa and other cities.
The problem has been the lack of affordable receivers.
GM is putting digital receivers in it's Canadian models starting this year.
Radio Shack is about to release affordable models at the end of this month in Canada, including portables, clock radios, walkman style devices and car models.
This should start the ball rolling for digital radio in Canada.
Here, all existing stations can get a digital license for each of their exisiting AM and FM licenses.
Living in Vancouver, Canada, I guess I will have to get an IBOC receiver for the US stations and a DAB receiver for the Canadian signals.

John Byrns <jbyrns@enteract.com> wrote:

"I am not disputing your statement that single channel modulation of a CQUAM system will have a detrimental effect relative to a simple monophonic AM signal. What I disagree with is your blaming this effect on "envelope detectors", and claiming that it does not also affect stereo radios."

It wouldn't (or at least shouldn't) because the decoding process would use the decoded L-R signal to recover the original L and R signals. Remember that the C-QUAM signal is "predistorted" by taking only the PM component of a QUAM signal and then amplitude modulating it in the usual way with L+R -- which is supposed to mean that the resulting C-QUAM signal will come out okay in mono with an envelope detector, which would not be able to cope with straight QUAM adequately -- and then the decoder uses the difference between the outputs of envelope and in-phase synchronous detectors (the latter will be badly distorted because of the remodulation process) to correct the corresponding distortion in the quadrature synchronous detector (L-R) output. Hopefully, even in an extreme case where some distortion still remains with an envelope detector, the predistortion of the L-R (PM) signal should cancel out that distortion to give good L and R outputs.

Not oficilly.. but a lot of interens from the art insitute ran shows there when they didn't broker out the time. That's how I got my start. My good frined Steve (and fellow Aart Institue of Fort Lauderdale attendee) Norman also did a slot there. He then became the intern of Ron & Ron's morning show on WSHE, and is better known to the world as 'Omlette' I actually took over his timeslot when he went across the hall to SHE.
I miss partying with that guy...

Which is kind of ironic. At the 1964-65 New York World's Fair, didn't they have
a pavilion with a restaurant, and the pavilion was called the "Festival of Gas"?

New Radio Show For The ' Net Generation

Bring the world of the web and technology to your listeners each week with a fun and energetic 1-hour radio show.

* Great Host and co-host, who deliver relevant content you'll want to listen to.

* Your local ads, your local sponsor.

* Sounds like your station - We're not music programmers, load the segments into your system, and add your own music.

* Your time slot! Put the show where you think it works best.

Seriously interested? Need more information?

A Demo is available!

Naturally, you can email us, and we'll get right back to you.

We're seeking expressions of interest from Commercial & Community station Program Directors everywhere, drop in to www.generationnet.biz for all the info.

Still, an awful lot do. It would be nice if they coordinated a bit,
i.e. not playing a piece if 10 other web-casters are playing it at the
same time.

WTAM has no nulls. It is non-directional. You are probably in an area where there is ground- and skywave cancellation at night.

[Moderator's Note: There are some interesting patterns between Cleveland and Detroit that, not being a radio engineer, I've never quite understood. I can get 800 CKLW and 93.9 CIDR from Windsor loud and clear here because there are no radio stations in the region on those frequencies. I also never have a problem receiving WJR here.

At times I've also gotten Planet 96 (do I have the name correct? WHYT, I forget the frequency) in spite of a very strong signal from 96.5 in Akron, and WRIF on 101.1 in spite of a somewhat decent signal from 101.1 WHOT in Youngstown. Hot 101 is strongest south of Cleveland, though, and in the right part of Cleveland, reception of WRIF is crystal clear - particularly in Richmond Heights and Willoughby Hills.

It has to have something to do with the lake. If you draw a straight line on a map between Cleveland and Detroit, most of what the line will cover is Lake Erie.]

3192. The "Great" Gary Dee

Newsgroup: rec.radio.broadcasting

Hi Folks,

As part of my "Radio Oriented" netcast on Live365.com, I thought that I would upload a broadcast of Gary Dee from WERE Cleveland in 1974. Gary Dee Passed away in 1995, but this was a "Mock" Funeral of Gary Dee -- with a message, and in my opinion, one of his best works.

http://www.live365.com/stations/10164

The play list this week is:

1.) Inner Sanctum - Over My Dead Body - 47-06-23 (23 min)
2.) Escape - Three Skeleton Key - 49-11-15 (29 min)
3.) WILD 94.9 - Funeral Crematorium Prank Call (1 min 23 sec)
4.) Gary Dee WERE Cleveland "Mock Funeral" in Cleveland - March 1974 (48 min)
5.) Fibber McGee and Molly - Halloween and Gildersleeve's - 35-10/28 (29 min)
6.) The Whistler - Shadow of a Mind - 43-06-05 (29 min)

These programs will run 24/7 until Sunday 10/27/02.

While your at it, please visit the Gary Dee Tribute Web Site:

http://www.geocities.com/Area51/Station/9398/index.html

Amen and Halleluiah!
Giv'em STEEL!!

Gary Dee (R.I.P.)

3193. Commercials -- poor sound quality... why?

Newsgroup: rec.radio.broadcasting
Date: 2002-10-24 14:29:26 UTC
From: wbrw@radiomailbox.com
Message-ID: <ap9046$4kd$1@xuxa.iecc.com>
Source record: 9405

Why is it that almost all commercials on FM sound so bad these days? I'm not talking about the content of the commercials -- I'm talking about their audio quality, or lack thereof.

As I understand it, these days commercials are commonly delivered to radio stations via the Internet. That is fine, but when played on the air, why do most of them -- expect "in-house" commercials that the station itself produces -- sound like they are sourced from 64 kbps MP2 files? I'm talking about the harsh, chattery, gritty, metallic, wishy-washy artifacts that are clearly obvious in the audio. It's especially bad when you listen to the L-R Stereo Difference component of the sound, which reveals that Stereo encoding is used even for mono voice, as in this case the L-R component should be silent or only a faint (but undistorted) echo, but instead is heard as a large amount of what can only be described as "audio garbage".

And these "artifacts" don't even seem to be the kind one gets from a typical Xing-encoded 128 kbps MP3 file. They sound more like an older, less refined codec, very similar to MP2, or the original version of RealAudio. I know digital audio is "the future", but why do people have to stick with 1996 technology? If you're going to send your commercials to stations over the Internet, why not use something like at least 192 kbps MP3, and have them actually sound *good* on the air, with clear, human-sounding vocal sibilance and musical percussion that doesn't sound like metallic chattering effects?

Combined with the increasing number of stations which are playing *music* that has these same digital quality problems (indicate of the inappropriate use of "lossy" digital data compression) and the large amount of audio processing that is in vogue with today's "Loudness Wars", it has gotten to the point where I have to turn the Treble control down quite a bit just to stand listening to most commercial FM stations. Only Classical and non-comm Jazz and NPR stations seem to have crisp, clear, truthful, high-fidelity sound on FM anymore, and also the handful of pop music stations that still play music direct from CD and commercials from good old-fashioned carts (SHOCK! HORROR!).

I can only imagine what IBOC, a.k.a. "HD Radio", will do to further fall down this slippery slope. Just think of a typical production chain... a caller using a digital PCS mobile phone is recorded as a testimonial on a radio commercial, which is encoded to MP3 audio for Internet delivery to the radio station, which transcodes it to MP2 for storage on their computer audio system, then runs it through a digital audio processor and a lossy-digital-compressed STL to the

lossy-digital-compressed IBOC transmitter which then broadcasts it as a low-bit rate AAC stream with "simulated" SBR treble response. After about a half-dozen lossy-digital transcodings and two dozen A/D-D/A conversions later, the listener finally gets to hear it in all its "CRYSTAL CLEAR, CD-QUALITY" glory!

It's almost enough to make a turntable, a cart deck, a homebrew reverb unit, a round-pot mixing board, a CBS Audimax/Volumax, and a Raytheon AM tube transmitter the prefect line-up for providing the pinnacle of true high fidelity audio reproduction.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
AND
we celebrate 55 years of student broadcasting at UM

> output.

That's essentially what I said in an earlier post, it isn't clear to me if you are agreeing with my point, or arguing in some way that I don't understand, that my opinion that CQUAM does not cause distortion with envelope detectors is wrong? With single channel modulation, I believe you will get distortion using either an envelope detector, or a CQUAM decoder chip, as the demodulator, if the IF response is not symmetrical.

> Hopefully, even in an extreme case where some distortion still
> remains with an envelope detector, the predistortion of the L-R (PM) signal
> should cancel out that distortion to give good L and R outputs.

I may be missing the point of that last statement, but I think if for some reason there is distortion with an envelope detector, I don't think it will be canceled by distortion of the L-R signal. The so called "predistortion" of the L-R signal is a whole nother matter than any distortion caused by an envelope detector, the whole purpose of the "predistortion" is to eliminate distortion on envelope detectors.

Regards,

John Byrns

"Which is kind of ironic. At the 1964-65 New York World's Fair, didn't they have a pavilion with a restaurant, and the pavilion was called the "Festival of Gas"?"

I can see where that might be a problem. :-)

Getting back to radio, WRKA(FM) in the Louisville market is running a promotion (http://wrka.com/fun/givemegas2.html) where they're giving free gasoline once a week to the first 103 customers at a local Meijer store (the store location is announced on the morning drive show the day before), and the slogan is, not too surprisingly, "Jeff and Gary Give Me Gas!"

Ron, I've avoided this discussion until now, but I have to point out one VERY relevant issue here: Does anyone seriously think that listeners will pay much attention to a spot while the DJ is being offensive?

Yes, he'll have his audience. Yes, people will write letters. But will the sponsors get effective advertising while all this is going on?

If I understand your position correctly, you seem to think that any exposure is good exposure. What I (and others) are saying is that maybe that's not the case. You seem to think that this is all about tweaking the bluenoses. It's not.

Ron, there are many other ways to entertain. You seem focussed on defending one of the slimiest ways of doing so, namely the radio announcer as obnoxious bully. I'm not suggesting that this sort of entertainment be banned, but I am saying that maybe radio stations need to consider advertising effectiveness while such behavior goes on.

I'll bet Jim Koch isn't too happy after the O&A incident. And I'll bet Orchard Supply isn't too happy about being associated with a criminal's efforts. Are they stupid customers? Or just maybe they realized something that eludes you.

The point is very basic. It's not about entertainment, it's not about offending people, it's not about anything other than advertising. So the real question is do people buy more when advertising is obnoxious? Do people who listen to obnoxious programming pay any attention to advertising? Is obnoxious behavior an effective tool?

Clearly, you seem to think it is. I'm suggesting that your conventional wisdom of any publicity being good publicity may not be what it's cracked up to be. Ask Martha Stewart if sales of her line of housewares is doing well...

The Official Old-Time Radio (OTR) FAQ
Frequently Asked Questions (FAQ) File
for OTR
(Old-Time Radio)

Last Modified: Monday, September 09, 2002

---------------------------------------------------------------------
Copies of this FAQ are distributed quarterly to rec.answers,
rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and
other news groups; and are on file at bloom-picayune.mit.edu in the
file: /pub/usenet-by-group/news.answers/radio/old-time-faq or
http://www.faqs.org/faqs/
The most recent HTML-ized version is at
http://www.old-time.com/otrfaq.html

---------------------------------------------------------------------
Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster
response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or
themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
```

Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at\ the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?
Q42. Where can I find OTR to download?
Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html

---

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

Just to get a little perspective in this
controversy, copyrights do expire. Under the old
copyright law, a copyright was good for 28 years
from the date of first publication, renewable for
another 28 years, for a total of 56. Under the 1976
act, those copyrights were extended to 75 years,
provided they were renewed. Copyrights under the new
law, which took effect on 1 January 1978, are good
for the life of the author plus 50 years. Copyrights
on anonymous works, works made for hire, etc. are
good for 75 years after first publication.

So, since otr has just barely been around for 75
years, little or none of it is in the public domain
yet by reason of having been around for a long time.
The question of what constitutes publication, and
the fact that sound recordings could not be
independently copyrighted until the new law took
effect add additional complications.

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

The days of radio being ruled by the artisans is over, and
for some time now it has been in the hands of people who
only look at the bottom line, so to reach them you must
talk through public radio pledges, or through sponsors

on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog)

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in

the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: andy@vintagebroadcasts.com (Andy Blatt)

I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio. They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines. The address is 12611 Madison Avenue in Lakewood, Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..

It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.

The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.

There is no difference in audio quality using either six hour or two hour mode.

It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.

The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.

Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)

Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But

not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.

I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.

Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request

to: Fred Korb, c/o Oldtime Radio Collectors and
Traders Society, 725 Cardigan Court, Naperville,
Illinois 60565-1202. I am willing to help you preserve
the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a
lubricating film can be automatically applied to the tape as it is
played. I tried it. Although temporary, it does indeed work! I'd
recommend it for those squeaky tapes that you wish to re-record onto
newer reels.]

Richard Fish (lodeston@bluemarble.net) also left this helpful info
about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the
backing, or the binder compound used to stick the magnetic
particles to the plastic backing -- has absorbed water
from the air. The water molecules actually make the tape
expand a bit, so it doesn't fit the machined tape-guides
properly anymore; and they can interfere with the
lubrication impregnated into the tape; and it is theorized
they can even interfere with the polished smoothness of
the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the
formulation of the plastic backing and binder. In the
mid-70s, both 3M (Scotch) and Ampex, the two major tape
manufacturers, started experimenting with their formulas.
They thought they were introducing major improvements,
but instead created a tape much more prone to
hydrolization than anything had ever been. The problem
did not show up for years, and the formulas did not get
corrected until sometime in the mid-'80s. Theoretically
any tape could get hydrolyzed over a long period of time,
especially if stored in a high-humidity situation, but in
practice most squeaky tapes were made (roughly speaking)
between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and
entreprenurially successful producer of radio drama in
the US today) gave me his formula and I've done it many
times now and it works:

Bake the tapes in a convection oven for 8 hours at 130
degrees Fahrenheit. It is entirely possible to bake a
tape twice if the first time doesn't do the trick. You
get about a three-week "window", sez Tom, before the tape
starts to re-absorb water. So the best deal is to bake
the tape and immediately make a copy. But if you forget
to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, visit my website
at http://members.soltec.net/~dan

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164

Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you. Here is a list of some of the WWW pages for radio drama (more may be found at http://www.old-time.com):

Atlanta Radio Theatre Company: www.artc.org
ZBS Media http://www.zbs.org/zbs.html
LodesTone Productions
http://www.bluemarble.net/lodeston/lode.html
Midwest Radio Theatre Workshop http://www.mrtw.org/mrtw

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.
To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at www.otrsite.com/ra/preview.html

---

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).

They have two catalogs: one for audio and one for video. Cassette albums are available in a large number of different styles, sizes and capacities. The 8-cassette albums I use are CPCN.4+4M/WHT in white and CPCN.4+4M/RBLU in royal blue. Outside dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit well on a bookshelf. This model also seems to cost less per cassette than any of the other models, though logic might lead you to the conclusion that the larger capacity ones would cost less.
[Polyline has a website at www.polylinecorp.com, and their new address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or Microsoft Explorer, most pages render well with LYNX and associated reader software.

Blind visitors who depend on DOS-based software to access the net, or who use a reading program to audibly display their computer's output might be interested in a program called "Nettamer". The Nettamer home page is at www.nettamer.net/

Q28. I am interested in re-creating some OTR drama. Where can I get scripts?

A28. Check your local or national OTR clubs. Many have a "print library" that includes scripts. You can also point your browser at the University of Maryland's script page, at www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

One excellent source is the book. "One Hundred Non-Royalty Radio Plays" compiled by William Kozlenko, Greenberg Publ of NYC 1941. It's certainly out of print now, but many libraries would have a copy. I bought mine at a used book store a few years ago. The 100 radio plays in the book include adventure, mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at http://www.genericradio.com

---

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel.

Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.groups.google.com to sample some of the messages.

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
* Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
* Radio Classics Live, Brockton MA (May)
* Annual Lum and Abner Society Convention (June)
* REPS Radio Showcase (June)
* Friends of Old-Time Radio (October)
* SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR

message boards at http://www.lofcom.com/nostalgia/phorums/

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material.

Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.

Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)

It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:

1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/

2. Make note of the LOC Call Number and description of the item you need.

3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.

4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.

5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting

access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

Q42. Where can I find OTR to download?

A42. The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET.

Hint: point your browser to www.groups.google.com and try your search from there

---

Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

A43. Wow. The answer to that question could fill a whole FAQ by itself. I'll try to keep it short.

Poor-sounding audio can be due to several causes. The audio on the tape from which the MP3 was made could have been poor, or the person that converted the analog audio to digital audio could have done a bad job. The statement: "remastered to digital audio" doesn't mean much, if the person doing the remastering does not pay attention to enhancing the source material.

MP3 and other digital compression techniques are lossy. That means the encoding process throws away data in order to make the file smaller. Although digital copies may not have noticeable loss, re-encoding, or encoding in a different digital format will lose even more data. Example: If somebody took a 32/22 MP3 and encoded it as a 64/44, it would sound no better than the 32/22, since data was lost in the original encode. Similarly, making a 128/44 MP3 out of an old, high-compression RealAudio(R) file would not improve the sound. The advantage to the higher bitrate is the possibility that the new encode will play in a larger number of MP3 players.

Some people record their RAs or MP3s onto cassette, and then trade the cassettes. At some time in the future, somebody else might try making an MP3 from the cassette. This analog - digital - analog - digital conversion results in a very quick deterioration of the sound because of the lossy compression I mentioned before. The new encode is a "sample of a sample". The sound deteriorates much more rapidly than does the "generation loss" experienced when duplicating tapes.

How can one tell if an MP3 was originally made with a high bitrate, or merely upsampled to a high bitrate? Listen to it, and compare it with a low bitrate sample. After all, the objective is to get as good

an audio rendition as possible.

I don't think you grasp the concept of competition. Most radio, TV and commercial webcasters don't usually share internal information with each other.

Which of the 9 other webcasters is going to be willing to step aside to let the 10th play a song? They're there to compete.

Can you imagine WPLJ, New York, calling WHTZ, New York, to tell them not to play a song because they're playing it? Ain't gonna happen.

WJR booms into pretty much ALL of Northeast Ohio. In my old home area
of Akron, it stops the car radio scan more reliably than some locals
in the Akron area! (Of course, like WJMP/1520, the 1 KW pea-shooter in
Kent...)

WJR seems to do somewhat better in the Akron area than CKLW, just 40
KHz and a few miles away... I used to be a regular on a syndicated
computer talk show which aired on CKLW, and my parents back in Ohio
kept listening through static every Sunday to hear it.

On 24 Oct 2002 14:29:21 GMT, "Andy Wells" <aw@NOSPAMandywells.com>
wrote:

>New Radio Show For The ' Net Generation

>Bring the world of the web and technology to your listeners each week with a
>fun and energetic 1-hour radio show.

First: what is the "net generation?" In the US all generations appear
to be using the net. In fact, older demographics find it an
inexpensive way to keep in touch with their families. Radio stations
in the US are going to want you to specify the demographic target of
the show, not some gobbledygook "Net Generation."

Second: Most slots on stations interested in this kind of show will
want 2 hours. 1 hour shows don't fit well on most talk stations. Music
stations are unlikely to break format for a talk show, let alone one
with an Australian accent and focus.

>* Great Host and co-host, who deliver relevant content you'll
>want to listen to.

Relevant to whom? Your pitch here should be to Program Directors.
They'll want to know if listeners will pay attention. What a PD wants
to listen to is irrelevant. He or she is going to want to know what
appeal it'll have to listeners. If you're in Australia how will you
know the US market? What if you discuss software that's not available
here? There's also a lot of software available here that can't be
exported. What will that do to your Australian stations?

Come to the US and listen to talk stations that promote "local" hosts
who are hundreds of miles away and have no feel for the "local"
market. They mispronounce street names and the names of politicians
being led off to jail. Boston is a great example. One talk station has
a "local" host who lives and originates on Long Island, New York. I'm
a former Bostonian who loves to listen to someone who might as well be
originating on Uranus.

>* Your local ads, your local sponsor.

>* Sounds like your station - We're not music programmers, load
>the segments into your system, and add your own music.

That's a lot of heavy lifting for what will be a weekend show. A
production person and a Music Director will have to be assigned to
find music that fits the format and times out to the hour. Your
segments will be inflexible. Stations generally want to receive a CD

they can rip into their audio systems in one piece. If they wanted to do a lot of production, they'd do the show themselves and be able to modify the talk segments so music selection is easier and matches the station's format, not chosen strictly based on the needs of timing.

As a programmer I have more important things to deal with than piecing together a weekend show. The production time required exceeds the length of the show.

Will your jock/announcer delivery be compatible with all the possible formats? Will geek-talk appeal to older demos? Will real American English appeal to geeks? Will Australian English appeal to anyone except those fascinated by crocodile hunters.

Frankly, you'll be wiped out by the likes of David Lawrence's "Online Tonight," Dave Graveline's "Into Tomorrow" and Kim Kommando that come either live or completely packaged. They also speak English in a country where "barbie" is a kid's doll.

> of housewares is doing well...

It depends on the show's demographic. Offending ``people who know
everything about morals'' appeals to young audiences. If the sponsor
wants that demographpic, then there it is.

Actually it appeals to all ages but the sort of offense has to
be more subtle as you go up in age.

As for Martha Stewart, she could have and maybe still can recapture
her sales by making fun of herself, or letting it happen to her
on her sponsorship.

She's let technical offense be framed entirely by uptight officials.
All she has to do it reframe it. There's lots of economists on her
side, by the way. The toppling of the uptight is attractive.

From: Richard Fry <rfry@adams.net>
Message-ID: <ap9phc$400$1@xuxa.iecc.com>
Source record: 9421

The stereo subchannel actually is transmitted by an FM process. After the stereo subcarrier and pilot are recovered in the receiver with an *FM* detector, the subcarrier is further demodulated by a (synchronous) AM detector to produce the L-R source for de-matrixing with the main channel into discrete L&R.

Using FM to transmit the L-R subcarrier improves the noise performance of the channel.

>Why is it that almost all commercials on FM sound so bad these days?

Man, I sure agree! But we often don't have any choice. The commercial radio business relies heavily on spot clearinghouse companies that gather thousands of commercials and then send them on to client stations.

The business used to rely on mailed and couriered reel tapes. Then DGS did a good job distributing spots over proprietary dial-up modems at slower-than-real-time rates overnight. Sound quality was pretty darn good.

Now everybody makes you retrieve spots from a website and there are whistles and all sorts of contamination of the sound.

3213. LED traffic light AM radio interference

Newsgroup: rec.radio.broadcasting
Date: 2002-10-25 12:14:59 UTC
From: wbrw@radiomailbox.com
Message-ID: <apbck3edu1@xuxa.iecc.com>
Source record: 9424

It seems that more and more traffic light signals are switching over from regular incandescent bulb designs to the new LED-type design, where an array of dozens of closely spaced red, green, or amber LEDs forms the "light". This saves energy, lasts longer, and provides a brighter color -- but at the expense of generating an annoyingly high amount of AM radio interference to anybody who might have their car radio tuned to the AM band when driving past one of these signals.

It is thankfully(?) contained to a small area just underneath the signal itself, but nevertheless, reception of all but the strongest AM stations is momentarily plagued with a loud hiss and/or buzzing noise, an effect I have noticed on *all* car radios, regardless of how good or how poor their AM tuner section is. Some traffic signals only use LEDs for certain colors, for example green and amber using LEDs and red using regular light bulbs, in which case only the colors that use LEDs generate the RFI -- so you might not only see the light turn green, you may also *hear* it turn green because of the static on your car radio!

There is no reason why car radio listeners should have to accept this, as regular traffic lights do not generate any radio interference (at least no more so than the power lines around them), and I have actually come across a few LED traffic signals that are nearly noise-free, perhaps due to superior design and installation, with better shielding and grounding of the offending circuitry.

So far I have contacted five different manufacturers of these LED signals with absolutely no response -- not even a cut-and-paste courtesy reply.

I then contacted the FCC regarding this issue any my lack of response from the manufactuers, and I only managed to get a cut-and-paste reply from them that just contained a few standard tips for dealing with household RFI (from dimmer switches, etc.).

Finally now, I contacted the RFI department of the local power company and they said that while they are aware of the problem with LED traffic lights, it is out of their control. They also mentioned that they are actually giving incentives for the installation of LED-type traffic signals, because of the energy savings they provide.

Furthermore, I have mentioned this problem several times in this and other radio-related Internet discussion groups with little to no response. Does nobody listen to AM radio in their car anymore? If so, there are quite a few top-rated AM stations that must wondering where all their ratings are coming from. And this problem is not

limited to my area of New Jersey, as I have driven past RF-noisy LED traffic lights in numerous states, and with the power company incentives, their popularity is only going to increase, much to the displeasure of AM radio listeners.

I'd say AM radio stations would be wise to look into this. The band already has enough to deal with, especially for on-the-road listening, that we don't need to have it wiped ou{{SSSSSSHHHHH}}ime you drive underneath a traf{{SSSSSSHHHHHH}}nd have that moment of audio clobbered by the hiss/buzz noise from the LEDs.

They are also installed as stop lamps in Buses/trucks, I haven't noticed any noise here. I don't think the LED would produce noise, they run on DC. Possibly the power supply for them is generating the noise, the manufacturer of the big aluminum box below the light should be contacted.

[Moderator's Note: Some auto manufacturers are also using LEDs in their taillights, particularly Cadillac in some of their higher-end vehicles. I wonder if this fits into the puzzle somewhere.]

3216. ATTN: Dave Sproul - D.C. FM Question

Newsgroup: rec.radio.broadcasting
Date: 2002-10-25 16:05:59 UTC
From: Jeremy Powell <jwpinva@yahoo.com>
Message-ID: <apbq57$41q$1@xuxa.iecc.com>
Source record: 9428

Hey Dave,

I saw you post about poor audio quality in commercials, so I thought I'd bend your ear while you're here.

Question: The "goal post" tower at I-495 and Lee Highway in Fairfax (38° 52' 28" N 77° 13' 24" W). I know that both WJZW and WJFK are diplexed on this tower, but I notice a horrible spur on 107.5 FM that sounds like some horribly over modulated combination of the two. This causes LOTS of noise on WTOP-FM and even prevents radio "scan" from locking on to WRQX at 107.3.

First, what is causing this spur and second, is someone at WJZW or WJFK aware of the problem and working to correct it? I've noticed it on and off for the better part of a year.

Thanks and Best,

Jeremy Powell

3217. Re: Commercials -- poor sound quality... why?

Newsgroup: rec.radio.broadcasting

Message-ID: <apbq5a$42p$1@xuxa.iecc.com>
Source record: 9429

There are any number of reasons, but here are the most likely.

1) MP3 delivery. It's getting better, in that I know that I'm recieving more commercials that are encoded at rates of 192 and up, but there are still a number of facilities delivering MP3 commercials at 128 and BELOW.

2) Automation/Mass Storage. The problem of iffy MP3's is only compounded when they are loaded into automation systems that use data compression. If your 4:1 MP3 (320 kbs) is loaded into the system with 4:1 compression you end up with 16:1 (about 85 kbs). This double encoding is why most national and regional commercials sound so horrid on air.

3) Compression. Seems that everyone in the studio LOVES compression. there cannot be too much it seems. That is fine for the listening experience in studio, but by the time it goes through the entire chain out to the transmitter, your audio has been squashed to within an inch of it's life anyway. Much like 2) above, multiple passes through compressors, and limiters - both broad and multiband - contribute mightily to the poor quality that winds up in the listeners ear.

4) Experience. Or lack thereof. With ownership consolidation, there is too big an amount of Joe-College producers too high up in the ladder. Why? They are young, willing to work ridiculous hours, suffer a HUGE workload for multiple stations, for almost no money. Those passionate people who truely love radio for what it can be at it's very best are slowly and surely being weeded out.

So starting from the very beginning ...

The pressured Sales Rep, who doesn't give a rats ass, signs up the eager client and shoves 10 lines of copy with the clients name in it 3 times down his throat. It goes to the Producer who has 5 other stations to worry about, and just wants to get this crap done so that he can go drink cheap beer at the promo event that evening. The spot is really heavily compressed as the Producer doesn't have the talent (or time) to mix it correctly, and whips it into the data compresses automation system. It goes through the signal chain that the Engineer has set so that they sound "really really loud, 'cuz louder is better right?". It winds up in your radio. The poor spot never had a chance.

As for the music ... the same problems apply. It's not played from CD's anymore. The CD's are only there to load into automation the first time, be available should the system fail, and look really impressive on the wall when clients or listeners pop in for a tour. All you need these days is a mic and a touch screen. Everything is coming out of the computer, including the announcers at times.

Update the codec? Why that would cost money and affect the bottom line.
Money? We can't spend money? Radio stations aren't throwing pennies,
much less nickels around like man hole covers these days. To my surprise
there are still a large number of organisations using MP2. As long as the
bit rate remains as high as possible, I'm not overly concerned about the
difference between MP2 and MP3.

I don't want to rain on your parade, but this is just one more nail in
AM's coffin. Over the past forty years, I have watched man-made noise
sources that affect the AM band gradually increase to the point where
most stations that used to cover their metro areas just fine are now
lost in the noise.

With computers, embedded microprocessors, compact fluorescents, and
dozens of other manifestations of modern society, the AM broadcast band
is drowning in a sea of electrical hash.

> for the better part of a year.

Hi Jeremy,

Sorry, my math, actually my typing, went awry the first time around, so
let's try it again.

That's a typical third order IM spur, 107.5 = (2 * 106.7) - 105.9
The modulation from 107.7 should be twice as loud as that from 105.9, and
the total adds up to about 300% modulation. The problem is most likely
due to an inadequate front end design in your receiver, not the fault of
the broadcasters.

I doubt WJZW and WJFK are actually diplexed, I suspect they have separate
antennas on the same tower, at least judging by the data I have, unless it
is a recent change.

Bottom line, buy a better radio.

>clobbered by the hiss/buzz noise from the LEDs.

It's not just LED traffic lights, it's DSL service, switching power supply noise, small fluorescent lights, and a nasty plethora of other common unintentional radiators.

The problem is that nobody cares. Do I listen to AM? Yeah, but not in urban areas. I listen while driving down highways or country roads, and sometimes at home while tinkering in the barn. None of these places have serious computer-related noise sources, light dimmers, or anything nastier than maybe an electric fence that might be leaking to ground just a tad.

The sad thing is that most of the smaller stations can barely radiate enough to be intelligible within city limits during the day. At night, they might as well give up unless most of their listeners live within a few blocks of the radio station. From where I live, only the 50 kW stations from several states away can be heard well. The locals usually suffer from skywave interference with the ground wave signal.

It's sad that the MW AM broadcast band has degenerated this far. I fear that it will have to get much worse before it gets any better.

Most problems of this sort are caused by receiver front-end overload. The FCC spec calls for suppression of transmitted RF intermods to at least 80dB below the unmodulated carrier, but intermods can still be generated within the receiver.

You guys hit the nail on the head with this thread... And it needs to
change! Everyone has their own format and encoding choices and needs, but
look at it this way:

1) Spot is produced by agency / talent and sounds good.
2) Spot needs to be sent to distribution channel
A) Encoded to mp2 or mp3 for filesize, no standardization, usually 96k or
less rate
B) Dithered to 44/16 (or less) for CD (better than A)
C) On used 2 track tape that just turned 20 years old (why is this still
here? See Spot run!)
3) Spot arrives at station for "No-Doze" night guy to dub in
4) Spot played back through ancient analog gear whilst recorded back into
the automation system
5) Spot encoded into automation format (usually mp2, "FM Quality 96k").
6) PD's and GM's are proud Spot is on air, quality is agency problem.
7) See Spot sound bad???

Tommy Rhodes
BigVoices Studios
http://www.bigvoices.net

Ps: All of our spots for distribution are 160k OGG / MP3 encoded in true stereo, not joint, & high quality, not small filesize...
And will directly plug into our soon to be released Linux based automation software.

MP2 actually does have some technical advantages over MP3, however, it is a less efficient system, so MP2 at 160 kbps is never going to sound better than -- or even as good as -- MP3 at 160 kbps. Video CDs (little brother to DVDs) use MP2 Stereo encoding at 224 kbps for the audio, and it still sounds pretty ragged at times.

And guess what? The fine folks at XM store their vast music library as 384 kbps Stereo MP2 files. That alone may actually be quite acceptable, but definitely not once they run it through their audio processing and 64 kbps AAC encoding by the time it hits the satellite. To make matters even worse, XM and Sirius both use so-called "Spatial Band Replication", or SBR. That means that the entire treble region of their audio, above 8 kHz, is SIMULATED based on harmonics of lower frequencies and a few bits of "hints" per second to help the receiver "guess" the treble response.

I am lucky in that my area's #1 station still plays music direct from CD -- once in a while you can even hear it skip. In addition, commercials are played from carts (with an occasional errant 8 kHz cueing tone getting through on the air), and they somehow avoid the plague of heavily artifacted commercials, although head azimuth mismatch sometimes causes a spot to sound okay in Stereo, but very dull when listening in mono. Overall, while I may have issues with their audio processing, their clean, un-artifacted sound is clearly superior to listen to, as compared to stations like NYC's "106.7 Lite FM" which sound like their entire musical library consists of 96 kbps MP2 files.

p.s. I've heard that the ubiquitous "Delilah" syndicated evening love songs show is delivered to stations via satellite as a 128 kbps MP2 stream. Can anyone confirm this? The way her show sounds on the air seems to vary from station to station more than anything else. Some stations even only carry it in glorious monaural sound, even as all of the station's own local IDs, commercials, and music are aired in full Stereo.

OK, ok, maybe the coordination idea is no good. Still, for consumers,
it would be most helpful if all playlists were centralized into one
searchable venue, like TV-guide. A wealth of music is in the public
domain. It's merely a question of time, as to enjoying it. That's
where a central schedule would come in handy.

> it, tho).

The vintage Becker stereo in my 1981 Mercedes tunes the 49m/6 MHz "Kurzwelle" (shortwave) band, and during the daytime, 6.070 CFRX is often the only listenable signal I can pick up on the band. It comes in well enough here in New Jersey that without looking at the dial you might think you were listening to 1010 CFRB locally.

This car radio also has surprisingly good reception on "Langwelle" (longwave), allowing me to pick up several local airport beacon transmitters, even while driving! However, its "Mittlewelle" (mediumwave/AM) band is really nothing special, and the "Ultrakurzwelle" (ultra-shortwave/FM) band only tunes up to 104 MHz, as that's as high as the German FM band covered when the radio was built.

Listening to shortwave at night while driving is really quite special, though. There is still quite a lot of variety on the 49m band, and the higher frequency means that stations don't fade out under bridges and there's (slightly) less power-line interference.

Putting an 8-element active phased array across the yard helps a lot. Also
you can offer to buy neighbors with dimmers really nice dimmers as replacements
(the upscale Lutron dimmers are pretty good for neighbors, the ``Diva''
model and upwards, which cost about $30), and buy their touch lamps
for double what they paid for them. Both sides have to get something they're
happy with or it won't work. It's a lot easier to eliminate noise at the
source. That leaves you free to null away local stations instead of having
to waste a null on neighbors.

So I don't see any real difficulty with the AM band.

I believe this is a couple hundred feet taller than the CN Tower. Of course the CN Tower is a self-supporting building, not a guy wire supported tower.

I don't know if this is still accurate but the last I heard was that the tallest antenna towers in the US were a 2,063 foot TV tower and a 2,060 foot FM tower both of which were located in ND. I believe there was also one or more over 2,000 feet located in TX.

I have read several times that the FAA has placed a maximum limit on antenna tower height. Does anyone know where this regulation is published? I would like to read it.

> It's sad that the MW AM broadcast band has degenerated this far. I fear that
> it will have to get much worse before it gets any better.

Don't worry. IBOC/"HD Radio" is here, and it will finally take care
of things once and for all.

Not by saving the AM band; rather, by having *AM stations themselves*
generate so much interference to each other, especially at night, that
it will essentially put the band out of its misery, and along the way
make a nice chunk of change for the folks at iBiquity.

Don't think it's true? Utility companies in the greater NYC region
have already received complaints from customers, thinking that the
noise and hash generated by 710 WOR's IBOC signal is RFI coming from
power lines.

I guess I am lucky in that during my half-hour (each way) daily
commute in suburban NJ, I can listen to a 250-watt AM daytimer all the
while, and only hear noticeable interference in two spots, both of
them LED traffic lights. I was surprised to find that the power
company actually fixed one particular spot where the lines were
constantly buzzing and crackling.

But this may not last, as there is a 50,000-watt monster just 20 kHz
up the dial from this little "peanut whistle" station, and if they
decide to use IBOC, the sideband hash will likely wipe out the
adjacent daytimer, similar to how 710 WOR's digital signal is plaguing
690 WPHE from the Philly area with a constant background hiss.

John and Richard,

Thanks for the explanations. For some reason front-end overload and/or intermod hadn't crossed my mind. I am a bit confused about the range of the intermod problem. Anywhere within a five mile radius of the WJZW/WJFK tower I can easily duplicate the problem. It REALLY trashes WTOP-FM for miles and miles; bad enough that I often switch to one of the WTOP AM relays (even with their awful patterns) to augment.

As for buying a better radio, I'll have to take that up with Ford/Bose (I have their "premium" system - complete with AM stereo - in my 2001 Ford F150).

Thanks Again,

Jeremy Powell

Thanks to John Byrns and Richard Fry for their enlightenment. The problems inherent between our (Disney/ABC's) 107.3 WRQX, our 105.9 WJZW and Infinity's 106.7 WJFK were cited by the NAB a year or two ago in their fight against low power FM. We've all had to live with unpleasant interactions as long as the transmitters have been located where they are.

WJFK's antenna is on one of the "goal post" masts. WJZW's two-bay, three sided directional Alan Dick panel antenna is just below the T-bar.

Aloha!

Anime in the Limelight just aired it's new episode on KUMU AM 1500 (www.kumu.com no stream available), and it is now posted on our website at www.limepub.com/radio.html .

Please join us as we celebrate FIVE long years on the web!!! We intend to mark the occasion by rerunning A VERY SPECIAL SHOW on our site only...the *VERY FIRST EPISODE FROM 1997*! To kick off the new AitL guestbook and AitL's new Archive which will showcase past episodes, we'll be auctioning an Unusual Christmas present, Guest DJ on Anime in the Limelight! Watch for more info on Ebay very soon!

We are Americas longest running,highest rated streaming media Japanese Animation/ Science Fiction Music Show, playing original full length cuts by the original artists in Japanese language, with English commentary, history, cultural backgrounds, introductions and news from the Legendary Anime DJ *MAX* (since 1997!).

It is our goal to be the official BGM of every Otaku that can get us.

3238. Re: Our Deadly Towers

Newsgroup: rec.radio.broadcasting
Date: 2002-10-28 16:23:47 UTC
From: "Paul W. Schleck" <pschleck@novia.net>
Message-ID: <apjoajjas1@xuxa.iecc.com>
Source record: 9307

In <apfilm$4gs$1@xuxa.iecc.com> AM-DXer@webtv.net (Patrick Griffith, N0NNK / WPE9HVW) writes:

>I believe this is a couple hundred feet taller than the CN Tower. Of
>course the CN Tower is a self-supporting building, not a guy wire
>supported tower.

>I don't know if this is still accurate but the last I heard was that the
>tallest antenna towers in the US were a 2,063 foot TV tower and a 2,060
>foot FM tower both of which were located in ND. I believe there was also
>one or more over 2,000 feet located in TX.

Correct. The two tallest are in North Dakota and a third tower over 2000 feet is the KLDE tower in Lake Jackson, TX.

>I have read several times that the FAA has placed a maximum limit on
>antenna tower height. Does anyone know where this regulation is
>published? I would like to read it.

There is no absolute limit on tower height, but the FCC and FAA have established a "rebuttable presumption" that any tower over 2000 feet is a hazard to air navigation, and an applicant must show a compelling need, as well as show that the air navigation hazard is minimal or can be mitigated. See:

http://www.natehome.com/TowerTimes/NewsDetail621.cfm?Id=35,541

This is why many towers are at exactly 1999 or 2000 feet. The skyscraperpage.com site erroneously lists some as 2001 feet, but I believe that this is due to rounding error in conversion, as they default to height in meters.

To make visual comparisons of the heights of man-made structures, including communications towers, go to:

http://www.skyscraperpage.com/diagrams/display.php

and:

- Go to the bottom of this page

- select the "ft" radio button to get height in feet

- select "pinnacle" radio box under "heights"

- multiple select (Ctrl button and left button mouse click) "Comm.", "Observation", and "Office" under "Type"

- select "Built" under "Status"

(make sure that you first de-select "Default" on both lists first)

- press the "Get Diagram" button.

This will show you architectural drawings of the tallest communications towers in the world and some of the tallest skyscraper towers in the world, to the same scale, in a "police lineup" view against a background marked with height lines.

Irwin X <irwin-shapiro@rcn.com> wrote:
> IBOC is 20khz wide

Nope... in its latest form, which is currently being used on the air, the "hybrid" analog/digital IBOC signal takes up a total of 30 kHz RF bandwidth -- 15 kHz in either direction from the carrier. Thus, the signal an IBOC station on 710 kHz will not only spill over to 700 and 720 kHz, it will also affect the reception of any stations on 690 and 730 kHz with its extended digital sidebands!

In comparison, for the past decade or so, North American AM stations have limited their RF bandwidth to a total of 20 kHz, which equals a maximum audio response of 10 kHz. This was chosen as the ideal compromise between audio fidelity and occupied RF bandwidth. There is still some overlap between channels, but it rarely occurs to the level that reception of a local AM station would be unacceptably degraded -- unlike IBOC, where even stations 30 kHz apart from each other (such as one on 710 kHz and another on 740 kHz) would have overlapping signals, which would make IBOC digital-mode reception of either station difficult to impossible, and would seriously degrade analog reception as well.

IBOC on the FM band has similar issues; stations using IBOC will also overlap onto adjacent frequencies, with a hissing or buzzing noise heard from the digital sidebands. 102.7 WNEW in New York City tested IBOC for a while, and it caused a strong buzzing noise to be heard on 102.5 and 102.9 MHz, even to the point where nearby stations on these frequencies complained to the FCC about how it negatively affected their signal coverage.

Hi

We purchased an Orban Optimod 8000 for use on our low power fm station. Any one here have any tips on how we should go about obtaining a competitve sound.

Please don't respond by telling me to buy and 8200 or 8400 (:D)

We also have some Urei Eq's and two Behringer processors, an Ultradyne 9024 multiband and Behringer Ultramizer DSP1400. Should any of these be included in the air chain?

Thanks,

Rob Basile

It's no good and it isn't going to happen. It might even be illegal, especially when stations get together the coordinate what they play.

Yes, there's a wealth of music in the public domain. Most of it is Classical and doesn't quite fit contemporary, or even oldies, formats. Remember, Public Domain means old. It means it's been around for so long that it's fair game for anyone. I don't know many stations that specialize in music from the turn of the century, even though the recording quality is perfect for most MP3 uses.

Here's are some of the Public Domain rules according to the University of North Carolina:

Created after 1/1/78 - Life + 70 years from the death of the longest living author.

Published between 1923 - 1963 - 28 years + a 28 year renewal.
Recently extended (if renewed) to allow 67 years of protection.

Most other publications are either 67 years or life + 70 years.

The only works not protected are those published before 1923.

You have a long time to wait before current music becomes public domain. You have an even longer time to wait before WPLJ or WHTZ begins to play it.

I would imagine that anything that does not have national interest would not be covered by either service. They don't have the channel space. You might try a regular radio for sports.

> Also are they working on a boom box version?

I sincerely doubt that either will come up with a "boom box" before they fold.

Amateur Radio Newsline™ #1315 – October 25 2002

Amateur Radio Newsline™ report number 1315 with a release date of Friday, October 25 to follow in 5-4-3-2-1.

The following is a Q-S-T. A ham radio operator may have played a part in the apprehension of the DC sniper suspects, the U-K says no more new operators in its 5 megs experiment and the ARRL says no to unlicensed visitors sharing a United States ham radio band. These stories are first on Amateur Radio Newsline report number 1315 coming your way right now.

**

RESCUE RADIO: HAM RADIO HELPS NAB THE DC SNIPER SUSPECTS

A ham radio operators may have played a role in the apprehension of two men wanted in connection with the sniper shootings in the Washington DC area. ABC News interviewed the trucker who called the police to report he had spotted the two suspects. When asked how he heard about the description of the vehicle, his response was that he heard it while listening to Bozo on WLW radio

Now, Chip Margelli, K7JA tell amateur Radio Newsline that Bozo in real life is Dale Sommers; callsign WB6OM. Sommers hosts a very popular late night trucker's show on the 700 Kilohertz clear channel station. His show is mainly music and information of interest to long-haul truck drivers. The description of the wanted men was just that. As a result the pair are in custody thanks to a trucker who was paying attention to what WB6OM had to say as “Truckin Bozo” over WLW in Cincinnati. (K7JA)

INTERNATIONAL: NEW PERMITS FOR THE UK 5 MHZ EXPERIMENT GOING ON HOLD

What happens when a propagation experiment gets a bit to popular? If you are a telecommunications regulator in the United Kingdom you might be inclined to temporarily suspended issuing further permits for hams to take part. And that’s what’s about to happen in regard to the United Kingdom’s 5 Megs experiment. From Nottingham England, here’s Jeramy Boot, G4NJH:

--
The Radiocommunications Agency says that applications for 5-MHz band experimental Notices of Variation or NoV’s have far exceeded their expectations. The R.A. now considers that the risk of congestion on the five spot frequencies allocated may be detrimental to the overall success of the experiment.

Accordingly, the RA has decided not to issue any further NoV’s for applications received after the 31st of October. The position will be kept

under review and occupancy monitoring of the frequencies will be carried out. It is hoped that ollowing this exercise - more NoV's could be issued, or a numerical limit to the number of NoVs can be set based on usage and congestion. It is likely that an announcement can be made later this year for action early in the new year.

Jeramy Boot, G4NJH.

--

The United Kingdom 5 MHz experimental band was made available to that nations individual Full Class A hams by means of a Notice of Variation issued last July. The five 3kHz-wide frequency allocations are permitted for the purposes of antenna and propagation experiments. The Radio Society of Great Britain is in charge of the overall management of the project. (RSGB)

**

INTERNATIONAL: AN IARU UPDATE FROM PRESIDENT LARRY PRICE W4RA

Still in the international arena, we have a follow up to last weeks story on the International Amateur Radio Union. With it, here's our producer Bill Pasternak, WA6ITF:

--

We received a very nice note from International Amateur Radio Union President Larry Price, W4RA, following last weeks story about the recent meeting in Morocco. According to President Price, the news isn't the IARU observer status at Plenipotentiary Conferences. He tells Newsline that IARU has had this status since the 1998 Conference in Minneapolis. At that time the International Telecommunications Union Convention rules were modified to give the same privileges at Plenipotentiary Conferences as IARU already had at Radio Conferences.

President Price says that the real news was the special station, CN8UIT set up at the conference center in Marrakech. He says that this was a follow on from a similar station set up by the ARRL in Minneapolis and one eight years ago in Kyoto, Japan from the JARL.

Buy the way, the CN8UIT call is based on the French pronunciation of the International Telecommunications Union. For those of you unaware, the International Amateur Radio Union was founded in 1925 specifically to represent our service at international conferences. It has done so -- with great success -- ever since.

With a thank-you to IARU President Larry Price, W4RA, for that neat note, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

In his note to us President Price says that the IARU has taken part in every major conference in modern years. Also that it will be there for all of us at WRC 2003 in Geneva Switzerland. (ARNewsline™)

**

INTERNATIONAL: ARRL ASKS FCC TO DENY US USE OF EUROPEAN/UK FRS-TYPE RADIOS ON 70 cm

The ARRL is saying no to visitors using unlicensed radios in our ham bands. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--
The ARRL has asked the FCC to deny a petition that would set aside spectrum in the 70-cm ham band for non ham use. This, for use by visitors from Europe and the United Kingdom to use their Personal Mobile Radio transceivers while in the U-S.

According to the ARRL Letter, the request was filed by Dr. Michael Trahos, KB4PGC of Alexandria Virginia. It asks that European PMR 446 type handie-talkies be allowed to operate license free while overseas travelers were in United States jurisdiction. PMR 446 hand-helds are similar to the US Family Radio Service transceivers but operate on eight channels between 446.0 and 446 .1 MHz. at up to a half watt out.

In his Petition, Trahos said that existing Part 97 Amateur Service rules precluding the use of PMR 446 radios in the US were essentially unenforceable and that granting his petition would have minimal impact on existing amateur operations. The ARRL countered by saying that there are obvious enforcement problems associated with the Petition. It says that putting the unlicensed users on a ham band is a formula for serious interference problems to be created.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.
--

As an alternative, the ARRL recommends that European and UK visitors simply purchase inexpensive FRS transceivers to use during visits to the United States. (ARRL)

RADIO LAW: FCC REJECTS AMATEUR'S PETITION FOR RECONSIDERATION ON CC&R ISSUE

The FCC has turned down a Petition for Reconsideration filed by a Florida amateur. This, of the Commission's 2001 decision to deny the ARRL's Application for Review in RM-8763. That proceeding concerned the League's effort to have the Commission include privately imposed deed restrictions under PRB-1.

The ARRL says that the FCC dismissed its Application for Review last December 18th. At that time the FCC noted that PRB-1 more than adequately protects federal interest in promoting amateur communications from overly restrictive regulations.

Not long after, W. Lee McVey, W6EM, of Bradenton, Florida, filed his own Petition for Reconsideration Mc Vey claimed that it presented additional evidence that the FCC had not considered in dealing with the ARRL's petition. But the FCC disagreed. It says that McVey offered up no new evidence in the matter and has turned his petition away. (ARRL)

**

ENFORCEMENT: INDONESIA PIRATE UPDATE

An update now to our recent story on the problems being caused by pirate stations in Indonesia. Not only are they making life difficult for hams around the world. The pirates are also playing havoc with domestic Indonesian ham radio communications as well. With more, heres Q-News Graham Kemp, VK4BB:

--
Many reports covering Indonesian non amateurs using our frequencies in the 40, 20 and 10 metre bands are making their way to the IARUMS. There seems absolutely no control over their working and existence by the local Government.

It is very difficult for licensed Indonesian amateurs to find a clear frequency in the lower edges of 40mb for their authorised cmmunications. Generally the licensed Indonesians are around 7050,7055 and 7060 kHz for their traffic. 7050 kHz frequency, carries CW lessons for the intending future amateurs. Otherwise, the licensed ones, operate in their own nets and you can clearly identify their call signs in between, as per standard practice, though the entire conversations are in Indonesian.

Another frequency regularly used by a SE Asian group for two-way non amateur communications is 14044 J3Eu mode around 0100 UTC every day. IARUMS need the services of those knowing SE Asian languages to identify them, they may be from XV, 3W or XU area.
--

If you are a resident of South-East Asia and heating this newscast, you are requested to watch 14.044 MHz and help identify the unlicensed users. Please send that information to your nations Intruder Watch Coordinator as fast as you can. (Q-News)

**

ENFORCEMENT: PIRATE BOARDCASTING IN SAN DIEGO CA

Back here in the U-S-A, Bob Gonsett’s CGC Communicator reports on an entity calling itself Free Radio San Diego which announced plans to begin broadcasting on on 96.9 MHz.. The transmitter location and parameters are unknown but one person reports being in the town of Carlsbad California and seeing a spray-painted stenciled sign on the concrete walkway promoting Free Radio 96.9. Also, the operator of the station does have a web site at

www.pirate969.org What action the FCC may be planning on this one is unknown. (CGC Communicator)

**

ENFORCEMENT: BE CAREFUL ON 146.52

The has FCC issued and then retracted advisory notices to five Mid-West hams telling them that they were talking to long. This, on the national calling frequency of 146.52 MHz.

The letters said -- and we quote: “The frequency 146.52 MHz is customarily used, and is called for under the band plan, as a simplex calling frequency for Two Meter operation. Numerous communications from your station during the above dates have lasted from nearly half an hour to an hour. While band plans are not mandatory under the Commission’s rules, the Commission depends upon them to minimize the situations in which Commission intervention is required, and they comport with good Amateur practice under our rules. Please review Section 97.101 of the Commission’s rules” -- end quote.

The FCC origionally said that the October 16th letters went out following a review of complaints about the operation of their Amateur stations between September 19th and October 6th. The retraction was issued on Wednesday October 23rd. No reason was given for the withdrawal. (FCC)

**

ENFORCEMENT: FCC JUDGE FAVORS SCHOENBOHM'S RETURN TO AMATEUR RADIO

The ARRL reports that an FCC Administrative Law Judge believes the regulatory agency should permit Herbert L. Sahoenbohm to once again hold an Amateur service license. In rendering his decision, Judge Arthur I. Steinberg says that he believes Schoenbohm now appears to hold the requisite character qualifications to be a Commission licensee.

The FCC had designated Schoenbohm's license renewal application for a public hearing. This based on character issues stemming from a 1992 conviction and alleged lack of candor during subsequent FCC hearings on the matter. The former KV4FZ lost his bid to renew his ham ticket in 2000. He applied for a new license in 2001 which lead to the recent recommendation by Judge Steinberg. A final decision on whether or not to re-license Schoenbohm now must be made by the FCC itself. Schoenbohm has also passed an Extra class exam that is also pending. (ARRL, FCC)

**

THE INTERNET: DENIAL OF SERVICE ATTACK THWARTED

What investigators are calling a sophisticated and large-scale assault against the World Wide Web has been thwarted . But not before nine of the thirteen servers that manage global Internet traffic were crippled for a short time on Monday October 21st.

The FBI's National Infrastructure Protection Center said that it was aware of the denial of service attack and is addressing this matter. Service was quickly restored after managers put defensive measure in place bringing the attack to a halt. Most Internet users did not even notice the hour long attack whose origin is still not known. (WebNews)

**

ON THE WEB: TECH NOTES GOES HIGH TECH

You have hears us credit it here on Amateur Radio Newsline. Now, Larry Bloomfield's broadcast industry publication Tech-Notes is available on the World Wide Web in a new easy-to-read format. Larry has adopted HTML scripting which permits him to publish pictures, logos and diagrams. And you will always have lots about digital and high definition television and much more. You can check it out on-line at www.Tech-Notes.TV. (Tech-Notes, CGC)

CONVENTIONS/HAMFESTS/CONFERENCES: AMSAT IN FT. WORTH IN NOVEMBER

The 20th annual AMSAT Symposium will be held November 8th to the 10th in Fort Worth, TX. The gathering actually kicks off with an Early Arrival Activity on November 7th and ends with the conclusion of the Board of Director's Meeting on the 11th. More information is in cyberspace www.amsat.org. (ANS)

**

SATELLITE NEWS: FCC DECLINES TO APPROVE ECHOSTAR-DIRECTV MERGER

The FCC has declined to approve the transfer of licenses from EchoStar Communications Corporation and the Hughes Electronics Corp. subsidiary DirecTV to form a new business entity. The FCC said that the companies did not demonstrated that approval of the transaction will serve the public interest,convenience, and necessity. The complete story is on the web at www.fcc.gov/Daily_Releases/Daily_Business/2002/db1010/DOC-227263A1.doc (CGC)

**

HAM RADIO IN SPACE: SOYUZ ACCIDENT SOLVED

A Russian state commission has set October 30th as the launch date for a Soyuz rocket carrying a three-person crew to the International Space Station. The decision was made after investigators determined that it was a probably a production glitch rather than faulty design which led to the October 15th crash of a similar launch vehicle.

For a while, it appeared that ham radio operations and everything else on the International Space Station might come to a grinding halt. Russia had threatened to suspend resupply launces following the mishap with the unmanned Soyuz ship which exploded seconds after liftoff, killing one person on the ground and injuring 20 others.

Such a delay would have had a devastating effect of future habitation of the space station. This is because the current emergency evacuation lifeboat vehicle is fast approaching the date on which it must be replaced. Only a Soyuz launcher can carry the replacement lifeboat to the ISS. If the Soyuz launchers had been kept on the ground, operations on the ISS might have been suspended. Thankfully, that wont be the case. (Published news reports)

**

INTERNATIONAL - RUSSIA: HELP LETTER MAY BE PHONY

A electronic letter purportedly from a Russian ham asking for financial assistance may be a phony. Then again, maybe not.

The letter showed up in hams mail boxes and on the numerous Internet news groups beginning on October 18th. Signed by a person calling himself Valentin, the note asks for donations of money and other gear. What has made many suspicious is that the writer never gives his call sign and does not use any ham radio terminology.

A number of people believe that the letter was actually sent by a spam-mail generating company or someone with a program that harvests e-mail addresses from the World Wide Web and generates automatic e-mail to them. There is even some speculation that the message did not come from Russia as the note itself claims.

Then comes a posting to the QCWA remailer from Lee Manning AK7T. Manning says that he e-mailed the writer of the message. Valentin replied that his callsign is RA3XAA. According to international call sign listings, RA3XAA belongs to Valentin Mikhaylin in Kaluga Russia. We have e-mailed him and are waiting to find out if he is the person who issued the letter and how he was able to get so many e-mail addresses of United States hams.

Meantime you might want to keep in mind two words. Caviat Emptor. Buyer -- or in this case -- giver beware. (QCWA Remailer, others)

**

INTERNATIONAL - THE NETHERLANDS: AUCTIONS NOT MANDATORY

Media Network says that a judge in Rotterdam has ruled that the next Dutch government will not be required to auction the commercial radio frequencies to the highest bidders. The ruling on Friday October 11th will impact on future spectrum auctions in that nation. (Media Network)

**

DX

In DX, GB2EVR is a new permanent special event operation for the Eden Valley Railway in the U-K. The station is located at the Warcop railway station, six miles east of Appleby-in-Westmorland, Cumbria. (GB2RS)

Also, JA2ZL will be active as F0/JA2ZL from Morea Island in French Polynesia from the 30th of October to 2nd of November. He plans to operate on 40 to 10 meters mainly SSB, with some CW and RTTY. (GB2RS)

And a milliwatt Beacon is on the air on 11 meters from Northern California. AOH is at the top of a very high mountain and operates under FCC rules part 15. This is the same as child walkie-talkie and can be heard on 27.125 MHz. The Beacon is on the air trying to make a point you don't need 20 kilowatts to DX. If you hear it, QSL to aoh@ computermail.net (APC News)

**

THAT FINAL ITEM: INNOVATION IN AMATEUR RADIO REWARDED

And finally this week, a big honor for a deserving ham. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, has the details:

--

Brad Phillips ZS5BP has been rewarded for his innovation in Amateur Radio. This by being named to receive the South African Radio Amateur of the Year Award.

Phillips received the honor for his work in introducing the Internet Repeater Linking Project – or IRLP to that nation. South Africa Radio League President Sid Tyler congratulated Phillips on his achievements saying that IRLP is as much part of amateur radio as is HF.

But that’s not all. The award itself says that IRLP offers new opportunities for the development of the amateur radio service in South Africa. This is because it brings amateur radio within the reach of young people in schools and the older generation who, after retirement, often do not have access to High Frequency stations or other ham gear of their own. Phillips work brings ham radio to both.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

The South African Radio Amateur of the Year Award is sponsored by Siemens. Its given annually by the South African Amateur Radio Development Trust to a ham radio operator who has made a major contribution to the Amateur service. (SARL)

I'll take a stab at this, right or wrong.

The Traffic Light LED's are probably run from a high voltage DC that is switched on and off rapidly (in the kHz range) to give a high intensity yet stay within the "average forward current" range of the LED. SInce the pulses are square waves (OK, probably not 50% duty cycle, but the switching times are probably in the nanosecond range), they are generating (and radiating) EMI up into the MHz spectrum. Truck and Car and Bus (etc, etc) are running off of lower voltages, and likely are running pure DC (with internal dropping resistors to keep the forward voltage drop in spec). No noise that way.

In article <apbq55$411$1@xuxa.iecc.com>, Ray Collins <rcol@intergate.bc.ca> wrote:

>
I think you're dead on with that one. The only hope HD-FM would have is to
be IBAC (In-band adjacent channel or in-band alternative channel). However,
many areas of the country don't have the space to give every FM broadcaster
a second channel for digital (unlike DTV). The only hope at that point is
place as many stations as possible. After listening to the WOR-HD (AM)
signal, AM is in the same boat - except they need full digital just to sound
better than AM analog.

I agree... most of the agency spots we get today are through various agency distribution sites, the most notable being Spot-Taxi/FastChannel.
All of the audio is in mp3 format with fairly low sampling rates... Our production rooms each have 1 Otari Reel-2-Reel machine, and no cart machines. We have Roland digital editors, but most in-house production is done using Cool Edit Pro... In fact only 1 person (the production director) uses the Rollands.... everyone else uses Cool Edit Pro.
Who would have ever thought that a production room would be virtually tapeless. Production/distribution sure has changed in the past 10 years...

As the one who tested the very first prototype of the 8000 (wirewrap in
a moduline box) on the air, I can tell you that if you try to push the
8000 into what is today considered "competitive" sound, it will sound
dreadful. Such is the nature of single-band processing. The 8000 was
designed to do one thing: accurately control modulation. And that's all
it does.

> We also have some Urei Eq's and two Behringer processors, an Ultradyne 9024
> multiband and Behringer Ultramizer DSP1400. Should any of these be included
> in the air chain?

That would be something you would have to experiment with to see if it
does what you want. You are not going to get what a modern DSP-based
processor will deliver (and you refuse to consider an 8200 or an 8400),
but you might be able to improve on a barefoot 8000.

I have to laugh at this argument guys..I AM a production director and I recieve commercials from DGS, Spot Taxi/Fast Channel and ftp sites and email and a few still on reel. The only complaints I ever get from anybody about sound quality is when i get a commercial on reel with all of it's hiss and muddy sound. Listeners want to hear clean/clear sound..their dont worry about bit rates. this is truely a geek issue....hehehe, just sit back and listen and have fun guys!

The exciter with the magnetic amplifier is the was the BTE-1C, while the exciter in the transmitter for auction has the BTE-1B exciter. Can't you kill any spurs simply by switching off the AFC?

Does your radio have a "local" setting? Many car FM radios have
a switch to cut sensitivity, specifically to combat this sort of
problem when near one or more high-powered transmitters (or when
getting lots of multi-path when driving inside a city with lots
of tall buildings).

Yes, I see that now. Indeed, the spurs in the BTE-1C are produced by the
AFC, but turning it off presents other, more obvious problems. :-)
Except for the battle to keep the noise floor down on the 1B, it was a
pretty innocuous beast. The only grief I got from the 1B was from an FCC
inspector who insisted that the normal AFC wobble was in violation of
the rules. Since he couldn't find the "rule" it violated, it became a
verbal advisory.

BTW, I got an FCC advisory on the 1C spur once. That's how I found out
about it.

Oh, THAT exciter. Actually, I had one of those on the air for the first five years or so of KOME. We called it "The Iron Fireman". If you kept the 1614 tubes fresh and the STP level up in the AFC motor assembly, it would stay pretty well behaved. The tricky part was getting composite to the grids of the balanced modulator without using the stock transformer! (A WE 111C works great.)

just to be picky, Fastchannel uses MP2 ...

In my market (Ottawa Canada), our major competitor moved into their new
building, and eliminated tape except for client cassettes. We still have
reels, but they are used for deck space and on rare occasion for taking
long form off satellite. We roll a tape machine into on-air studios as
needed. Here, tape gets used as often as turntables.

The difference that I'm having a hard time getting used to is not lack of
tape. That was easy, and besides I don't have to empty the trash bin
twice a day or keep bandaids around for tape cuts. What's different for
me is the lack of a console. Most of our studios use little Mackie
notepad mixers to feed stuff into the Cool Edit computers. All you have
in your working position is a keyboard, mouse, monitor, and this little
mixer off to the side. It takes a while to adapt to mixing with a mouse
instead of a handfull of faders.

The exciter with the magnetic amplifier didn't have a mini-crt. The two models before the one with the magnetic amplifier had mini-crts. The later of the two models with the mini-crt, had a PLL that locked onto the crystal frequency with no frequency offset or error beyond that of the crystal itself. Of course there was always the possibility that the PLL could go out of lock.

> Listeners want to hear clean/clear sound

Low-bit-rate digitally compressed audio is neither "clean" nor "clear"... just listen to XM, Sirius, or IBOC for an example.

And if that's all listeners care about, then why even bother producing commercials in STEREO? Most FM radios operate in blended-to-mono mode most of the time (especially while driving), so what difference does it make if they never even get to hear the Stereo sound anyway?

Besides, if you kill the Stereo, you can drop the MP3 bit-rate even further, and the listeners won't care! Just like with today's crappy digital mobile phones that sound like you're calling from Mars when the signal starts to cut out and gets all garbled -- hey, it's CRYSTAL CLEAR, with NO STATIC AT ALL, so it MUST be better than analog, just like the fancy TV commercials say!

I would hope that would be the case... but if anybody can put me in touch with somebody who cares and will listen, I would be very thankful. So far, I have even contacted the division of the ARRL which deals with interference to amateur radio (and these LED traffic lights do generate RFI well into the HF range) with no response.

>minimal or can be mitigated.

As a private pilot, anything much higher than 500' AGL is a noticeable
hazard to me, particularly in the Baltimore/Washington DC area.

Common VFR flight often starts at 500 AGL in rural areas. In theory,
one is supposed to maintain at least 2000' AGL in congested areas,
unless you're taking off or landing. Unfortunately, that's often what
we're doing in those congested areas because that's where the busy
airports are.

Thus I get concerned with anything above 500' AGL. It's not so bad
when I'm flying locally because I know where most of these sticks are.
The problem is if I'm flying to a city I'm not that familiar with. No,
I haven't had any near misses, but I have had radar vectors which, had
I followed them would have sent me straight in to a very tall tower.

Tall towers aren't always depicted as well as we'd like on radar
scopes of controllers. And even though you think those lights on the
tower have great visibility against an open sky, you have to remember
that those of us who actually use them are usually looking at them
against a backdrop of a very well lit ground. I know neighbors hate
those white strobes; but damn, those slowly blinking red lights just
aren't that easy to find against a backdrop of street lights at night.

I'm a bit confused as to what the attraction is to such tall towers.
I've yet to notice much difference in coverage when I'm flying at
1000' AGL versus 2000' AGL. I don't hear any other aircraft or
controllers I didn't hear before, I don't hear any new AM stations,
nor do I notice any new FM stations where there were none before. So
I really don't understand what the attraction is with such tall
towers. It seems to me that beyond 1000' AGL there isn't much
advantage for going to the extra altitude.

Can someone explain why sticks above 1000 AGL or so are desirable?

Rob: I concur with the other respondents to your message. I too was into trying to squeeze performance out of the 8000 back in '76 and '77. It's not going to happen today against major market folks, not even close.

Before 8100 came out (in '79 I think) which was a very good analog multi-band performer, we used a Multi-Max compressor-limiter made by Pacific Recorders (PR and E) which was multiband and had a terrific set of time constants that seem to complement the 8000 pretty well. Its crossover frequencies could be adjusted to sound very natural on most programming, yet give a lot of great "punch" where you wanted it. It permitted the 8000 to sound good in the "fast" mode which too advantage of all the fast limiting it had on hand.

The addition of a Modulation Sciences CP 803 composite clipper did a lot for the loudness war, at the expense of some distortion when driven too hard. The LEDs on the CP803 were there for a reason! If you have an SCA, be careful with composite clipping, it really mucks up the baseband.

The 8100 blew that combo away and the rest is history. (The 8100 also benefited with a little composite clipping too.)

Current 8200, 8400 and Omnias just are too difficult to compete against, even with a rack full of equipment..

Both Omnnia and Optimod make "lite" versions that are not too expensive to buy and sound excellent with out the complexity of the larger units (and some of the flexibility.

8000s also get out of adjustment and can sound just awful, especially when the electrolytics get old and the op-amps start drifting etc. Technology in analog ICs was still moving ahead at a rapid pace in the 70s Be careful.

Multi-Max and composite clippers like the CP803 do show up sometimes on the used market. For my money I would buy a modern bare-bones unit from one of the majors and you will be happy for a long time!

any other hobby...

3270. New IBOC test station, 1700 WI2XAM

Newsgroup: rec.radio.broadcasting
Date: 2002-10-30 14:11:54 UTC
From: wbrw@radiomailbox.com
Message-ID: <apopbajvb1@xuxa.iecc.com>
Source record: 9338

FCC-licensed "Experimental" station WI2XAM on 1700 kHz is now operational, with 50 watts daytime and nighttime transmitting from the Lucent offices in Warren, New Jersey.

I caught them on the air today (Tuesday October 29th), playing about an hour-long loop of music excepts (never a full song), ranging all the way from Classical to Country, Rock, and Pop. There were no IDs or announcements except for legal IDs of "WI2XAM, Warren, New Jersey" or "This is WI2XAM, Warren" at seemingly random times, in addition to the top of the hour.

The purpose of this station is to test the new IBOC digital AM system, also known by the marketing name "HD Radio". And indeed WI2XAM was using IBOC, with the digital sidebands splattering all the way from 1685 to 1715 kHz, enough to cause a constant background hiss in the audio of nearby WTTM 1680 AM Stereo from Princeton, NJ.

WI2XAM was also stepping all over a very nearby 10-watt TIS weather info station, WPSH468 in Manville, NJ, also licensed to 1700 kHz. On my car radio driving in the area between these two stations, 1700 kHz was pretty much a 50/50 mix between the two. Also while driving, I caught WI2XAM on the air until at least 45 minutes after local sunset, with the digital sidebands totally murdering normally good skywave reception of WPTX 1690 AM Stereo from Maryland. I came back to the radio at around 8:45 PM and WI2XAM was finally off the air for the evening.

Here is an MP3 sample of how WI2XAM sounded this afternoon at my home roughly 5 miles away from the transmitter, with the characteristically poor analog AM audio quality of a "hybrid" IBOC signal (limited to < 5 kHz frequency response), and also WPSH468 faintly audible in the background:

http://rvcc2.raritanval.edu/ktek9053/wi2xam.mp3

Meanwhile, here is a pictorial representation of the two low-power 1700 kHz stations overlayed on the coverage of 1680 WTTM, showing the overlap amongst all three:

http://rvcc2.raritanval.edu/ktek9053/wi2xam.gif

1700 WI2XAM isn't Warren, NJ's only AM radio station; here is a recording of Warren's own Part 15 station "KJFE" on 1500 kHz in full C-Quam AM Stereo:

ftp://209.193.86.116/North-America/USA/NewJersey/1500kjfe.mp3

Now, which one sounds better to you -- and not just because of the
wider variety of music and the fab liners?

RCA also used "The Iron Fireman" exciter, with the motorized capacitor, in
their first post war generation of Television transmitters.

> The tricky part was getting composite to
> the grids of the balanced modulator without using the stock transformer!
> (A WE 111C works great.)

Why couldn't you feed the composite to the grids of the balanced modulator
using a triode connected as a split load phase inverter, as RCA did in the
stereo modification kit for the BTE-10B? RCA advertised that their stereo
generator could be connected to "The Iron Fireman" exciter, as well as the
then current BTE-10B, and I always figured they would use the same basic
conversion as with the BTE-10B. I have never seen one of those old "Iron
Fireman" exciters, let alone one that was converted to stereo, but I have
often wondered if any were converted to stereo, sounds like they were?

If both the VO guy & the studio are on broadband, is the audio quality anywhere near usable for recording VOs, ISDN line-style with NetMeeting, Timbuktu etc?

The other idea we're tossing round is to produce the sess over NetMeeting's audio, but have it recorded into the computer at the VO end, then send it as a file transfer.

Anyone tried this stuff?

Sorry if this got posted twice, didn't show up so resent thru Google.

Not only can they sound awful, they can develop less obvious but nevertheless detrimental problems. One of them is to suddenly suffer a lack of 38KHz suppression. FCC rules require -40db, but most stereo generators (including the 8000 when it is working properly) easily exceed this by a wide margin. In failure mode, however, it can be only a few db down. Besides violating FCC rules, presence of 38KHz carrier can produce an insidious multipath effect, making it sound as though the station has serious coverage problems.

I've run into this several times with 8000s and believe me, the first time was a real circus, particularly trying to figure out why the station was suddenly multipath-ridden within a mile and clear sight of the transmitter!

> In my market (Ottawa Canada), our major competitor moved into their new
> building, and eliminated tape except for client cassettes.

We stopped sending clients cassettes a couple of years ago. Our sales people all have CD Boom Boxes to take to play the spots. A blank CD is at least half the cost of a cassette and the quality is much better. Our graphics/promotions dept. bought this label making gizmo at Office Max and we print up impressive labels for our client dubs. Originally, the clients were really impressed, but now it has become the norm.
We have 4 production/voice-tracking studios, all of which contain Cool Edit Pro and Nero Burning ROM on a separate PC/Network than out on-air delivery system..
They are all on a peer-to-peer network with a mirrored server, so all files are available from any machine or from the on-air studios.
Radio has changed more technologically the past 5 years than at any point in it's history (at least from my perspective).

Some stations have mile-high sticks. We call the support structure a
"mountain."

Generally, the higher the antenna, the better the coverage and the more
successfully the signal can penetrate shadow areas that would not be
coverable from a lower site.

What is "AFC wobble"? Are you talking about the BTE-10B, or the older
exciter with the motorized capacitor? The BTE-10B had an off frequency
detector that I would think would take the transmitter off the air if
there was any "AFC wobble"?

> BTW, I got an FCC advisory on the 1C spur once. That's how I found out
> about it.

You said in an earlier post that the built-in spur in the BTE-10C was
"non-curable", I'm curious why it was "non-curable"? If it was the result
of unintentional coupling of the reference oscillator into the main RF
path, I would think that some mechanical redesign, adding shielding, or
rerouting wiring, would solve the problem. If the "spur" was actually
feeding through the AFC circuit and magnetic amplifier, I would think that
extra filtering could be added to get rid of it, the magnetic amplifier is
so slow I can't imagine that extra filtering would make the loop unstable.

The first method we used was a homemade solid state amp which had
inverted outputs. Without RCA's transformer in place, a lot of nasty RF
would feed back into the amp despite filtering. We found it easier,
ultimately, to mimic RCA's original design, but with a "broadband"
transformer. It worked quite well. The only real problem with the Iron
Fireman was its hum level and its susceptibility to microphonics. It was
a constant battle to meet -60db noise levels. We went through a lot of
rubber grommets.

I knew those weren't the correct numbers, but since I couldn't remember
the right ones, it didn't seem prudent to correct someone with incorrect
data! :-)

> there was any "AFC wobble"?

The Iron Fireman's AFC had jitter of several hundred Hz, apparently due
to the time constants of the motor and its damping mechanism. The FCC
inspector observed the jiggle on the Belar monitor and first assumed
that it was measurement ambiguity. I told him that the monitor was
reading what it saw (you could even see the motor movement corresponding
with this wobble), so then he tried to find some rule that proscribed
the frequency jitter. He couldn't.

Memory fades after all these years, but as I recall, we were able to
reduce the problem substanially, but not entirely. (We're talking about
the 10C now.) I believe the "cure" involved both filtering and an
alteration of the time constant. But the spur was always measurable.

<wbrw@radiomailbox.com> wrote:

"Here is an MP3 sample of how WI2XAM sounded this afternoon at my home roughly 5 miles away from the transmitter, with the characteristically poor analog AM audio quality of a "hybrid" IBOC signal (limited to < 5 kHz frequency response)..."

IIRC, there is also a mode in which analog audio is only(?) limited to 8 kHz, but which requires the receiver to use both IBOC "sidebands" -- in 5 kHz mode only one of the two is needed.

Wow...this guy is either a prophet or he worked in radio recently. I'm one of those people (who still works in radio--part time) and HEAR this problem more and more! People in the business don't really understand how even digital audio can be degraded quickly no matter how good it initially sounds. And I hear the compression on air all the time!

WHFS(FM) 102.3 MHz, the first FM stereo station in the DC area, used an "Iron Fireman" converted to stereo. 40 years later I can't remember if I bypassed the input transformer or used another means of coupling. Since I had to get Type Approval/Acceptance for the transmitter, the diagrams remain somewhere in the FCC's files. I didn't keep them when we sold the station, and I'm sure the succession of owners since then threw them out with that composite transmitter.

I can't recall anyone complaining about the audio quality of the station's output.

I have not read the law about cigarette commercials but this is my take...

GSN is not receiving any compensation from Marlboro.
Also, they do not show any commercials that promote the *benefits* of the
Malboro cigarettes.

The only references is the Marlboro name on the stage and in the credits and
the host telling the contestants to pick up a carton of Marlboro on the way
out.

If they were to say that the miniscule references to Marlboro on GSN shows
is illegal, then let's also ban the coverage of the NASCAR Winston Cup
series.

No,

Even bumpers on talk stations pay public performance fees.

Probably done to evaluate / demonstrate the effects of the IBOC artifacts on
various types of music.

Since KJFE is not a licensed radio station, it doesn't exist in the FCC
databases and is NOT a "radio station" in a legal sense. Thus it receives
absolutely no protection against interference.

Agreed! AM was great for decades and our highly electronic society
with newly added digital technologies are REALLY raining on AM's
parade. Time to get down with IBOC (actually DAB, IBOC is a band aid
in my opinion) and lose AM (and FM) as soon as possible.

Hello!

http://www.rarebritradio.co.uk

Rare Brit Radio plays music from all sorts of Artists and from
different genres such as;
Britpop: The Beatles, David Bowie and Pink Floyd to more recent ones
Blur, Oasis, Gorillaz, The Coral, Electric Soft Parade....
Hip-Hop & Funk: Tupac, Biggie, Grandmaster Flash, Kool & The Gang....
70s, 80s and 90s classics: Queen, Status Quo, Tina Turner....
.... And that just scratches the surface! There are too many styles
and Artists to list here so if you like what you've read tune in! And
if your favourite Artists aren't being played tell us! The station is
for you after all. Interaction is encouraged, we want to play what you
want to hear! :)
We're also training people from scratch who want to be presenters,
this is a golden opportunity for those wanting to enter the industry.
Contact details are on the site :)

Dylan

You tell that story in Africa, where SW (analogue, yes) is still very
popular.

The solid-state inverting amplifier was the tactic we filed for Type
Approval. Later on, when the rules became less restrictive and did not
micromanage the composite chain, we experimented with the 111C coil. It
didn't have quite the stereo separation the amplifier did, but it met
spec and the noise was better.

> I can't recall anyone complaining about the audio quality of the station's
> output.

What about noise? I recall that those last few db to push it south of
-60db came with very great effort. There was lots of tube swapping and
mechanical isolation gyration to keep that noise down.

One thing that hasn't been mentioned about the Iron Fireman was its
half-frequency output. That meant that one used it only in a suitable
legacy RCA transmitter (like the BTF-10B we had) or devised some sort of
outboard doubling stage.

As it turned out, the BTF-10B survived our Iron Fireman, so we had fun
converting the doubler stage to on-frequency so that we could employ a
Collins 310Z-2 replacement exciter. Of course, keeping the BTF-10B
putting out 10KW with its funky triodes, big cavities with big sliders,
grid assemblies, cranky tuning motors, mercury vapor rectifiers, and on
and on was an adventure novel in itself.

Different strokes for different folks.

The radio broadcasting situation in Africa is surely entirely different from
that in the USA. The radio situation in OZ is surely quite different from
that in the USA, etc., etc. Even Canada hasn't had the great proliferation
of modest-power AM stations squeezed together that we find in the USA, yet
Canada is trying to go Eureka DAB.

> Just curious -- where can one get a part 15 C-Quam transmitter, and how
> much does it cost?

http://www.amstereoradio.com/

Click on "Projects", then scroll down to the bottom of the page.

$100.00 US, fully assembled and tested, or build one yourself using the schematics and PC board prints available online.

It is crystal-controlled, using a crystal of 4 times the frequency you wish to transmit on -- so, for a 1500 kHz signal, you would use a 6.000 MHz crystal. Output power depends on what final RF amp transistors you use, and what voltage you feed them with; with standard 2N222-type transistors and a 9-volt supply, it is within the typical 100 mW FCC Part 15 limit. Versions up to about 2 watts have been built for users outside the USA (these little AM Stereo transmitters are in use all over the world, from South Africa to New Zealand to the UK).

The audio bandwidth is only limited by the audio you put into it, and by the receiver you use. When rebroadcasting FM Stereo audio through this transmitter and a hi-fi AM Stereo reciver, the 19 kHz pilot tone is visible on the spectral analysis graph of the received AM audio!

With only minor circuit modifications it will work just as well on virtually any frequency from Longwave to Shortwave. With other circuit tweaks it can transmit using the Kahn/Hazeltine or Magnavox AM Stereo system, instead of the Motorola C-Quam system, for testing of older "multi-system" AM Stereo receivers, or for the old two-radio trick with Kahn ISB-type AM Stereo.

Anyway, what you hear from "KJFE" still falls far short of the true quality that this transmitter is capable of delivering. Here is an extreme hi-fi example recorded from a Realistic TM-152 AM Stereo radio (popular in the 1980s) specially modified with the latest Third Generation C-Quam decoder chip from Motorola (the MC13028) and with the bandwidth-limiting ceramic filter bypassed:

http://rvcc2.raritanval.edu/ktek9053/cquam.mp3

If only all AM radio sounded this good.... however, even regular mono AM can sound excellent, given the right combination of transmitter, audio processing, and receiver.... such as in this case, 1070 WKMB in Stirling Country, NJ using a vintage Collins transmitter with homebrew "Rontimod" audio processing (teamed up with a Gates Statesman limiter), as received on an Optimus hi-fi AM mono radio:

http://rvcc2.raritanval.edu/ktek9053/wkmb/wkmbhifi.mp3

This is the type of sound that FM has been trying for decades to achieve: loud and punchy, yet crisp and clean -- brought to you by a 250-watt AM daytimer.

3300. Re: Commercials -- poor sound quality... why?

<<People in the business don't really
understand how even digital audio can be degraded quickly no matter
how good it initially sounds.>>

One cause for poor quality is that commercial producers often obtain components for their productions (voice tracks, music tracks, SFX, etc) in the form of MP3s and then mix them into a finished production and them re-compress that spot into new MP3 to send out to the various stations. That's why I try to ascertain what is going to happen to the voiceovers I produce at home and send to clients. I prefer to send uncompressed files such as WAVs or AIFFs, especially if I know that the resulting spots will be distributed as MP3s. That way if my VO is going to get compressed it will happen only once and not until the end of the procedure. If a VO I do is going to be dropped directly into a TV spot or an A/V it isn't as much of an issue. But in any case, if the producer insists on getting his files in the form of MP3s it is not really up to me to argue with him about it.

I've been called a lot of things in my 18 years in this personal hell I call radio, but prophet is a first. Really I'm flattred, and I don't know if I'm blushing or it's just warm in here. I'm still here, Production Supervisor for a 5 station cluster, and I like it enough I think I'll stay a little while longer ... fighting the battle for better quality audio on the airwaves.

[Moderator's Note: Maybe Peter is claiming that you are the product of some sort of automation system. I wouldn't be so quick to assume what he meant by "prophet." ;)]

It's probably a C-QUAM broadcast exciter run barefoot. Carver used one at some trade shows to demonstrate the TX-11a tuner (complete with a miniature free-standing tower and "CRVR" sign). Whether this actually meets Part 15 limits is an open question.

Let every state go its own way.

Which remembers me of the early days of TV when in Europe each country
had its own system. It is still confusing with France and the UK having
different (color) systems from Germany, Holland, Belgium etc.

Following up on my earlier report that the IBOC signal on WETA-FM
interfered with stereo reception of the Onkyo TX-8511 receiver, I'll
tell you my solution. I purchased a Panasonic SA-HE100 receiver
at the same price ($300) at the same store (Circuit City). The sound
quality is not quite as good, but more pleasant to my ears than
the Yamaha RX-496 that I also tried out. The FM tuner section
is very good, and isn't affected by the IBOX signal. It was
recently rated #1 (and a Best Buy) in Consumers Reports
among mid-price home entertainment receivers.

The specs aren't as good as on the Onkyo or
Yamaha--the rated thd is 0.9%, and the signal
consistency isn't given. But since I'm really interested
in how it sounds not how it measures on the bench,
I'll agree with Consumers Reports' blind testing of
the performance and say it's excellent. The only
negative I've seen so far is that it gets _very_ hot, with
only a small grill on the top and a temperature-controlled
fan in the back. The fan hasn't come on yet as far as
I know, s I don't know what its effect would be. All in all,
I'm happy with the distortion-free FM.

Don't think it impossible that automation systems won't be able to
talk to you sometime in the future and tell you what they really
think! You would probably hear things like "man, I play the same 20
songs ALL DAY" and "they make me work at 7 stations without an extra
hard drive" and finally after they get feelings and emotions "crush,
kill, destroy"!

The Denny's commercial for their new menu items is a perfect example of this. It sounds like a really bad MP3.

"WBRW" <wbrw@radiomailbox.com> wrote in message news:ap9046$4kd$1@xuxa.iecc.com...
> Why is it that almost all commercials on FM sound so bad these days?

Wrong - Rich - You have this confused with the folding fishing reel thing. You may be thinking of Cal Worthington and His dog spot - But could also be thinking the 60's Mod Squad - though did not think Ron was old enough yet. Could be a restaurant thing from returning troops though, I doubt this.

Maybe it is one of the if I tell you I must kill you deals - so don't tell me - OK

Oh no! Not another "savior"! Like we need another after the Internet,
AM stereo and deregulation. Another savior will shoot out the last
tire at this rate.

> What pray tell is a "Rontimod"?

Here's the story...

Many AM and FM radio stations use an audio processor sold by Robert Orban, called the "Optimod".

However, many moons ago, Ronald Michels -- 1070 WKMB's engineer and son the station's late founder Herb Michels -- decided to make up an audio processor all by himself. It still sits there today in WKMB's equipment rack, a simple metal box with a single unmarked knob on the front panel, and a single LED bargraph meter to show the audio level. Everything else is pre-configured by the circuitry. Since he felt it actually provided better results than an Optimod, Ron decided to poke a little fun at Mr. Orban, and he called his home-brew processor the "Rontimod".

As a result, no other radio station in the country sounds like WKMB does. Their audio is just something you have to experience in person -- preferably on a hi-fi "AMAX" radio. The Rontimod's sound harkens back to the days when AM music stations were "loud" and "punchy", yet also "clean" and "detailed". In comparison, the Optimod has rather muddy mid-range, and just sounds too "sterile".

Yes, the Rontimod does "pump" a little with a strong bass beat. But, we grew up with AM music stations sounding like that, and that "punchy" sound is actually beneficial on AM because it allows you to hear the "effect" of bass and percussion sounds that would otherwise be outside the audio range of a typical narrow-bandwidth AM receiver. In comparison, with an Optimod these parts of the music will simply *disappear* if your AM radio doesn't have a wide enough audio response to hear them directly.

Of course, the Rontimod also uses a healthy dose of pre-emphasis -- a.k.a. treble boost -- so if your AM radio has any degree of high frequency response, on WKMB you will hear the treble sounds more clearly than on any other station. But, it is still within reasonable limits, so on a true wide-bandwidth radio, WKMB will not sound too strident in the treble range.

I believe it's the home-made audio compressor/limiter made by their engineer (Obviously named Ron)...I seem to remember it that it's single band from Radio Shack parts.

All I could picture in my mind when the suits were talking about the
displays on the new digital car radios were web page banner ads.
Internet presence has certainly bailed out broadcasting from its
doldrums, hasn't it?

I recall that a certain New York City rhythm and blues and/or soul and/or jazz radio station uses a certain song to set up its hourly station ID - that songs is King Pleasure "Moody's Mood For Love" with the key lyric "there I go, there I go."

My recollection says it's WLIB. Does anyone know with any certainty which station this is?

thanks for any help.

Steve

I decided to do a test to see how much of an effect these LED light shave. There are a number of them near me, and I tested by putting on a 13 watt night signal from ~ 30 miles away and very prone to interference. No interference was detected on any of the lights. Go figure. High tension wires blew the signal completely away.

RATELCO Battery charger / Rectifier. Type FC481505A
Model # 102B-3608-00. 48 Volt @ 150 Amps, Float or Equalize.
These units were manufactured SEPT 1991 and are in the Factory
crates and have Never been used, have 2, sequential Serial numbers.
These units can be used as 48 volt charger for Telephone Central
Office Battery supply's with the ability to Float or Equalize.
They can also be used as a stand alone, well filtered, power
supply rated at 48 volts at 150 amps CONTINOUS DUTY.
Input = 110, 208, 240 Volts. 60 Hz, single phase
A must for the expirimenter working with the new generation
of 48 volt solid state RF devices Rated in excess of a Kilowatt.

Weight is approximately 550 pounds, Crated for freight shipping.

1500.xx Prepaid, in my garage in Merritt Island, Florida.

Loading and shiping are buyers responsibility.

Amateur Radio Newsline™ Report 1317 – November 8, 2002

Amateur Radio Newsline report number 1317 with a release date of hFriday, November 8, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Some good numbers for ham radio here and across the seas. The hobby is growing once again. Find out the details on Amateur Radio Newsline report number 1317 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: GOOD NUMBERS IN THE USA

The numbers are in and they speak for themselves. Restructuring is finally having a very positive impact on ham radio growth here in the United States. Amateur Radio Newsline's David Black, KB4KCH, has the good word:

--
Last year at this time there were nearly 683,000 hams licensed by the FCC. As of October this year, there are 2235 fewer--but numbers are not always what they seem. The reality is that ham radio in the United States is growing once again.

First, the General and Extra class have increased substantially since the 13 and 20 word per minute Morse code exams were eliminated April 15th of 2000. In fact, the number of people holding these licenses has increased by well over 25,000 for each license class. And that's great news for ham radio equipment suppliers since they rely on higher dollar high frequency transceiver sales for much of their yearly income.

The Technician class is holding its own, too. The number of new Tech license holders is keeping pace with the number of hams either upgrading or dropping out of amateur radio. The net change is close to zero.

Only the Novice and Advanced classes are seeing significant drops in numbers. No new Novice or Advanced class tickets have been issued since April, 2000. And while existing licenses can be modified and renewed, it appears as if that's just not happening among Novices. They appear to be fading away, and quickly -- there were 65-thousand Novices in 1997 -- only about 37-thousand, though, today.

The bottom line is that for the last 12 months ham radio has seen an average of 16-hundred brand new ham licenses issued each month. That's an improvement of 160 a month over the previous year. And that improvement is very good news for ham radio.

As to the state with the largest number of hams? It's still California which can now claim being home to more than one seventh of all the nations hams. Latest figures show there are more than 100,000 hams now living in California.

The state with the fewest hams? North Dakota -- only 1575 hams there.

Reporting from the Amateur Radio Newsline's South-East Bureau in Birmingham, Alabama, I'm David Black, KB4KCH.
--

The bottom line is this. Restructuring seems to be doing the job it was intended to do. Its now up to those in the hobby to work to swell its ranks even more. (W5YI)

**

RESTRUCTURING: 5000TH UK FOUNDATION LICENSE CELEBRATED

The United States is not the only place where ham radio is growing. In the United Kingdom Andrew Finch, M3FMA, is only 11 years old and suffers from dyslexia. But nothing was going to keep the young scout from becoming a ham. And now he is the 5000th person to obtain that nations new and very popular Foundation Class license. Jeramy Boot, G4NJH, has more:

--
The Radiocommunications Agency has been so pleased with the numbers taking up the license, that it decided to commemorate the 5000th amateur with a special award. Alan Betts of the Agency's Amateur Radio section, commented: "The radio amateur community was around 50,000 strong before the new license was introduced, and so this level of interest is very welcome".

He also added "The License has proved very popular with young people and amateur radio is very much an up-and-coming hobby for them".

The presentation of Andrew's prize took place at a ceremony held at the Radiocommunications Agency's monitoring station in Baldock, Hertfordshire on Tuesday the 22nd of October. Andrew was also presented with membership of the Radio Society of Great Britain by its President, Bob Whelan, G3PJT, who also presented a host of radio amateur goodies and books.

Andrew's day was not over after the ceremony - he was given a tour of the Radiocommunications Agency monitoring station at Baldock. 'Heartbeat FM' from Hertfordshire then conducted an interview with him before he was whisked off for another interview with 'Dream FM' of Chelmsford.

Jeramy Boot, G4NJH.
--

Andrew had told his parents that he was going to begin saving his pocket money to buy a radio. He won’t have to do that. Among the gifts he received for becoming the 5000th Foundation license holder was a brand new F-T 817 transceiver donated by Yaesu. The Foundation License has only been available to U-K residents since earlier this year. (GB2RS)

**

EMERGING TECHNOLOGY: HAM RADIO INVITED TO DIGI RADIO EXPERIMENT

Ham radio has been asked to be a part of an important digital radio experiment. Bill Pasternak, WA6ITF, has the details:

--
Digital Radio Mondiale, or DRM, is a project aimed to revitalize the short-wave, medium-wave and long-wave AM radio broadcast bands. This, by using digital signals to provide near-FM quality.

Radio amateurs and serious broadcast-band listeners have been invited to become part of the DRM Software Radio Project. They may also be among the first to access the initial DRM programs when test transmissions begin next month.

James Briggs is the DRM Projects Co-ordinator with Merlin Communications in Dorset England. Biggs says that the project relies on adding an extra down-converter board to existing receivers and then using software to decode the signal via a PC soundcard.

The interface is simple and the sound -- hopefully -- will be superb.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.
--

To find out how you can play a part in the DRM experiment take your web browser to www.drmrx.org (Media Network)

**

RADIO LAW: CONGRESS AND CCR'S

Some good news and some bad news in the drive by the ARRL to get Congress to ban deed restrictions on hams who want to put up towers and antennas. The good news is that several more members of both houses have signed on as co-sponsors in recent weeks. The bad news is that no action took place on the issue before Congress adjourned for elections and there's little chance of any action once it returns to close out the year. The bottom line: The ARRL says that it will try again when Congress reconvenes in January of 2003. (ARRL)

ENFORCEMENT: FCC PROBES JAMMING OF THE HURRICANE WATCH NET

The FCC is asking a Morrison Colorado ham to explain why he allegedly interfered with an onging hurricane emergency net. The FCC's Daryl Duckworth, NN0W, tells us about the case:

--
Duckworth: “The Enforcement Bureau opened an inquiry into allegations that Merle W. Garbe, W0SBE, of Morrison Colorado interfered with the Hurricane Watch Net on 14.325 MHz on October 3rd of 2002 during its Hurricane Isadore operation.”
--

The FCC letter to Garbe notes that the Hurricane Watch Net is operated to assist the National Hurricane Center in Miami, other government agencies and people in a target area of a hurricane system. The letter goes on to note that the agency considers this service to be one of the most important purposes of the Amateur Radio Service .

**

ENFORCEMENT: NO RADIO CALL-IN SHOW PERMITTED ON 75 METERS

The FCC is asking a California ham why he allegedly ran a radio call in show on 3.830 MHz and requested shortwave listeners to participate. The regulatory agency alleges that James C. Watkins, KI6GU, of Burbank ran such an operation last August 16th and 24th and used a reverse autoptach system to facilitate the call-ins.

Along with the FCC inquiry Watkins was furnished 9 pages of material relating to the complaints against him. He was given the customary 30 days from the date of the Commission inquiry to respond. (FCC)

**

ENFORCEMENT: BIG FINE AGAINST FLORIDA PIRATE BROADCASTER

The FCC has levied a $10,000 fine against a Florida man who has allegedly been operating a radio transmitter without a license. Richard Munoz of Naples was issued the forfeiture notice for operation of a radio station on 105.1 MHz without Commission authorization. Amateur Radio Newsline’s Bill Burnett, KT4SB, is in Miami with the details:

--
The story begins on April 20 if this year. This, when agents from the Tampa Office investigate a complaint alleging that an unlicensed radio station was transmitting on frequency 105.1 MHz in the Naples, Florida area.

A search of Commission records shows that there was no FM radio station licensed on 105.1 MHz in Naples. So, using a mobile direction finding vehicle, the agents trace the station to the Tree of Life Church in Naples.

The agents then interview several witnesses at the church who identify Richard Muñoz as the operator of the radio station transmitting on 105.1 MHz. The witnesses also provide the agents a business card identifying Richard Muñoz as the pastor of a Spanish-language ministry called Mission Possible Ministries. A brochure advertises a radio program called “Mission Possible" on 105.1 MHz.

The agents interview Muñoz. He admits that his ministry owns the radio station equipment and is operating it.

The agents ask Muñoz if he had a license for the station. He replies that a friend has submitted an application to the FCC. Also that the friend has advised him that he could operate the station while the paperwork was being processed.

The agents advise Muñoz that he cannot operate the station without a license and directed him to terminate the unlicensed operation. Muñoz requested additional time to notify his listeners that the station had to go off the air. The agents again tell Muñoz that he could not operate the station without a license and order him to take the station off the air. Muñoz directs another person to turn off the transmitter.

But the story does not end there. On April 30th the FCC'sTampa Office receives another complaint alleging that an unlicensed FM station is again operating on 105.1 MHz in Naples. Also that it is causing interference to the reception of an FM broadcast station licensed to operate in that area.
On May 14th, agents again trace the station to the Tree of Life Church and on May 17th the Tampa Office issued a warning letter to Andrew dealing, the head pastor of the Tree of Life Church. The warning letter advises DeLong that operation of a radio station without a license violates Section 301 of the Act, ordered him to cease operation of the unlicensed station transmitting on 105.1 MHz immediately.
Then, on May 24, 2002, the Tampa Office receives a letter from Pastor DeLong. In the letter, DeLong states that Richard Muñoz is the operator of the radio station transmitting on 105.1 MHz. Also that that Muñoz leases space for the radio station from the Tree of Life Church, and that the Tree of Life Church had no control over the operations of the radio station.
Based on the facts before it, On June 5th the Tampa Office issues an Notice of Apparant Liability for a $10,000 forfeiture to Richard Muñoz for operating a radio station without a license in willful and repeated violation of Section 301 of the Act. In his response to the notice, Muñoz admits that he operated the unlicensed station on 105.1 MHz, but requests cancellation of the forfeiture. He tells the FCC that his church, Mission Possible Ministries, had agreed to purchase 50% of the radio station for $15,000 from Daniel Morisma approximately eight months earlier. According to the reports, Muñoz maintains that Morisma told him that there was an application for the radio station on file at the FCC and that the station could go on the air while they were waiting for the application to be processed.
According to Muñoz, Morisma told him that the station should go back on the air because the FCC would not visit again, and that if the FCC did visit again, it would issue a second warning before proceeding with any penalties. Muñoz asserts that the station had been using the time between the FCC’s first and second visit to explain to listeners that they would soon be off the air because they had been lied to and scammed and that the station was a week away from dismantling when the FCC visited the station the second time.
But the FCC sees it another way. In its order the FCC says that it is unfortunate that Muñoz may have been duped into believing that there was an application for the radio station on file with the FCC and that he could put the station on the air while the application was being processed.
None-the-less says the FCC, Muñoz clearly knew following the inspection by its agents on April 20th that the station was unlicensed.
The bottom line. The FCC says that under these circumstances, it concludes

that no reduction of the forfeiture on this basis is warranted.
>From Miami, I'm Bill Burnetrt, KT4SB, reporting for the Amateur Radio Newsline.
--
Muñoz was given the customary 30 days to pay the fine. If he fails to do so the FCC indicates that other punitive action may be taken.

**

WITH THE SCOUTS: JOTA FOLLOW-UP

ARRL Educational Programs Coordinator, Jean Wolfgang, WB3IOS, reports that so far over 125 scouting Jamoboree on the Air or JOTA survey have been received for this years event. The reports show over 9079 Scouts, 2855 visitors, and 657 hams participated. This is a substantial improvement over last year when only 65 surveys were returned!

But says Wolfgang, there are several state we have not heard from. They are Delaware, Hawaii, Idaho, Mississippi, Montana, Nebraska, North Dakota, South Dakota, Utah, Vermont, and Wyoming.

If you participated in JOTA 2002 and have not yet completed the ARRL survey please have a representative of your JOTA event complete and submit the form as soon as possible. You will find it on the web at http://www.arrl.org/FandES/ead/jotalog. (WB3IOS)

HAM RADIO BUSINESS: HAS HAMVENTION 2003 GOT A DEAL FOR YOU

The planners of Hamvention 2003 say -- have they got a deal for you! The Hamvention, in cooperation with the Dayton Montgomery Convention and Visitors Bureau has put together a special V-I-P package. It will do to five of the first 500 who purchase a preregistration ticket before Novermber 15th.

The five lucky winners will be chosen in a randon drawing in early December. They will receive two nights of hotel accommodations during Hamvention, dinner for two at Jay’s Restaurant, a V-I-P badge, a special souvenir package and the most important prize of all. An on-site V-I-P parking pass for the show! Thats right -- parking almost at the Hara Arena front door.

More information on this special Hamvention 2003 promotion is available by e-mail to tickets@hamvention.org. You can also phone during business hours Eastern time to area code 937-276-6930. (Dayton Hamvention)

**

HAM RADIO BUSINESS: WORLDRADIO EDITOR DEPARTS FOR CAREER IN LAW ENFORCEMENT

One ham who may not be at Hamvention 2003 is Worldradio Magazine editor Rick McCusker, WF6O. This is because McCusker has announced that he is leaving the post in a major career change.

Accordong to McCusker, he has been in training for some time to become a peace officer. He has also been working as a Reserve Depuity Sheriff in his spare time. Now, he has accepted a full time position with the Sacramento California County Sheriff’s Department.

Duruing his tenure at Worldradio, McCusker completely redesigned and modernized the magazine’s look. He took most columns by-monthly permitting the addition of new writers representing emerging technologies in the hobby. His legacy is a well respected publication with a steadilly growing reader base.

McCusker’s last day at Worldradio will be on Wednesday November 13th. At airtime no replacement editor has been named. (ARNewsline™)

**

THE CHANGING OF THE GUARD: KL7Y LOST IN MOTORCYCLE ACCIDENT

Some sad news. Word that famed contest operator Daniel Robbins, KL7Y, of Wassilia Alaska has died in a motorcycle accident while in Hawaii. According to the Honolulu Star Bulletin, the 54 year old Robbins died Thursday October 31st after he lost control of a motorcycle while riding in Kona and drove into a lava field. The Fire Department said that Robbins, who was not wearing a helmet, suffered head and other injuries.

KL7Y was a friend to many inside and outside of the world of ham radio contest operations. He had just completed operating the CQ World Wide SSB contest from KH7R a few days before the accident that took his life. A memorial guest list for his friends to pay their respects has been set up on line at www.contesting.com. (K7JA, contesting.com)

**

ON THE AIR: THE MIGHTY MO CELEBRATES VETERANS DAY

The “Mighty Mo” is coming to the ham radio airwaves for a very special event. Bob Maguire, KA2WXU, reports over the Internet that on November 9, 10, and 11 the Battleship Missouri Amateur Radio Club will be on the air each day from 17:00 to 04:00 U-T-C on 14.263, 21.363 and 28.363MHZ, in honor of Veteran's Day weekend. There is no special event QSL card for Veteran's Day event but if you Q-S-L via KH6BB you will receive a regular Mighty Mo QSL in return. More information is on the web at www.kh6bb.org. (KA2WXU)

**

ON THE AIR: UARC CELEBRATES 75TH ANNIVERSARY

The Utah amateur Radio Club will celebrate its 75th anniversary with an on-the-air event beginning Saturday November 9th and continuing through November 10th. Operation will be on most high frequency bands with emphasis on 20 meter SSB. The call sign to listen for is W7SP. For a special commemorative card, QSL as directed on the air. (N7HVF)

**

INTERNATIONAL – INDIA: PIRATES PERSIST

The president of the Amateur Radio Society of India, reports a significant number of pirate operations using call signs VU4A, VU7A and similar other call signs continues. VU2SDN says that a blanket ban exists on operations from Andaman, Nicobar and Lakshadweep islands, and that VU4 and VU7-prefix call signs have not being assigned for 10 years. The only exception was the brief 1993 VU2JPS operation from the Andaman Islands. Quoted in the ARRL Letter, VU2SDN says that call signs that begin with VU2 followed by two or three letters or with VU3 followed by three letters are the only valid call signs for India. (ARRL)

**

INTERNATIONAL – USSR: A WALL OF SOUND

Radio Liberty's broadcasts to the Union of Soviet Socialist Republics were the target of Soviet noise jamming for several decades. But Media Network reveals that the Russian operators actually left frequencies undisturbed so their friends could hear the programs. Now, you can too with a 30 second audio sample of what jamming sounded like for those of you too young to remember. Its on the Radio Netherlannds website. The URL is http://www.rnw.nl/realradio/features/html/jamming021018.html (Media Network)

**

DX

In D-X, a surprise U-S to Japan long path opening surprised many South-West region hams the morning of October 31st. At about 15:45 UTC, D44TD was worked as far west as Arizona. while N6XQ was reported to be 599+ into JA-land, Unfortunately for many U-S hams the surprise opening took place while they were away at work and preceeded an X-class flare a bit later in the day. (K7JA)

THAT FINAL ITEM: SOLVING AN AGE OLD QUESTION

For nearly a century, mathematicians have been stumped by one of the math world's most difficult problems. This is a conjecture by French scientist Henri Poincare about the properties of three-dimensional space. And now, it appears as id a British math whiz claims to have solved the problem. Amateur Radio Newslines Henry Feinberg, K2SSQ, has the puzzeling story:

--
Jules Henri Poincare was dubbed by E.T. Bell as the "Last Universalist. A man a who was at ease in all branches of mathematics.

Poincare was also a 19th century professor of astronomy who made fundamental contributions regarding the motions of the planets. He went on to found the field of topology, a branch of geometry, and even competed with Albert Einstein in the study of relativity.

Before Poincare, mathematicians fully understood two-dimensional space, such as the Earth's surface, and could list all the possible shapes of two-dimensional surfaces and use mathematical calculations to distinguish between them. But The math mystery Poincare raised regarded the properties of three-dimensional space. His question, or conjecture, was whether the two-dimensional calculations could be easily modified to answer similar questions about three-dimensional spaces.

He was pretty sure the answer was yes but couldn't prove it mathematically. Nearly 100 years later, math whizzes remain stuck, except for one. His name is Martin Dunwoody.

Dunwoody is described as a British mathematics expert. His answer is barely six pages long and only an outline. And as you might expect, Dunwoody's solution - complete with formulas and diagrams - has been praised and challenged in England.

No, we will not try to explain all the math here. What is interesting is the reaction of the scientific community. Professor Ian Stewart of the University of Warwick, one of Britain's most respected mathematicians calls it the first good shot at this problem in years,. But Colin Rourke, another University of Warwick mathematician, disagreed. Rourke says that when he raised a problem in the solution, Dunwoody admitted on his Web site that it could be difficult to overcome.

Once the math community has accepted the solution, the Clay Mathematics Institute in Cambridge, Mass., must conduct its own review. Only if that proves successful will Dunwoody be rewarded. And if the reaction of the British math professors is any indication, this conrriversy could rage on in math circles for years.

Adding it all up for the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.
--

Even if Dunwoody continues to refine his answer and eventually is proven correct, it could be a long time before it's official. First, he must get it published in a mathematics journal, then undergo a two-year waiting period of international review. (Science Today)

Those of you who think you've heard Bob Trout of CBS announcing the Japanese surrender should check out trout.mp3 on this page. The version most often heard is one that was re-created by Trout for the Edward R. Murrow "I Can Hear It Now" album in the late 1940s, but the much rarer clip Jeff has is the real deal, complete with a feed from London that went sour and some cheering in the newsroom that some journalistic purists may find inappropriate. (My guess is that this was why Fred Friendly had Trout record a cleaned-up version for the album.)

Message-ID: <ar3vo6acj1@xuxa.iecc.com>
Source record: 9295

Hello radio fans. I hope my question is not considered off-topic or stupid.
I grew up in LA listening to the radio. The am band of the 50s, 60, and 70s fascinated me. When I started driving in the 70s, I found myself listening to the stations like KNX,KFWB,KMPC, KABC,andKFI, which had reliable people on the road and in the air who gave road and traffic reports for those of us stuck on the 5 405 15 10 210 and other congested freeways, advice and alternate routes.
A big traffic tie-up was called a sig-alert. I heard this on the radio, and knew what it meant. I heard it TV when I finally got home, on ch 2 4 5 7 9 and 11. Even on B&W tv on pioneer tv station in LA in the 50s, KTLA ch5. I thought I always knew what "Sig-alert" meant,, until the other day, when a Latino friend and co-worker, who knows I am a fanatic and fan of word origins, asked me about it.
I was clueless! Can any of you great radio fans out there give me story of the origin of the term?
Thank you, Rod Heathcote

Rod Heathcote <jeeprod@ridgenet.net> wrote:

"I was clueless! Can any of you great radio fans out there give me story of the origin of the term?"

The Sig-Alert was named after radio personality, engineer and KMPC co-owner Lloyd Sigmon, who came up with the idea in the mid-1950s. The original system used a special decoder connected to a tape recorder to automatically record traffic bulletins sent out by the LAPD on its dispatch frequency, so that they could be played back by local stations. (http://www.snowcrest.net/marnells/sigalert.htm) The present Emergency Alert System uses much the same store-and-forward concept for weather and most other warning messages, though now the recorder is a digital RAM buffer built into the decoder unit.

3348. Re: radio term: Sig-alert? origin pls

Q What are Sig-Alerts?
.
A. "Sig-Alerts" are unique to Southern California. They came about in the 1940s when the L.A.P.D. got in the habit of alerting a local radio reporter, Loyd Sigmun, of bad car wrecks on city streets. These notifications became known as "Sig-Alerts." Later Mr. Sigmon developed an electronic device that authorities could use to alert the media of disasters. Caltrans latched on to the term "Sig-Alert" and it has come to be known as any traffic incident that will tie up two or more lanes of a freeway for two or more hours. And, yes, Mr. Sigmon is still around and very proud of his namesake.

3349. SPEEDWAY DINGED $8K FOR 1 WATT

Newsgroup: rec.radio.broadcasting

TURN DOWN THE POWER IF SOMEONE COMPLAINS
SPEEDWAY DINGED $8K FOR 1 WATT
The FCC has fined the operators of California Speedway for operating one watt on 104.7 without a license. The power was measured at 250 times over the legal limit, which the Speedway is disputing. The Speedway claims that the station was only operated during events and believed that the equipment is FCC compliant. They claimed that the manufacturer told them to turn down the unit's output control if it received any complaints of interference during use of the equipment. The Speedway was fined $8,000 down from $10K based on the Speedway's past record.

If you search the net, and search under LPFM equipment, you will find suppliers.

Three things to remember -- and others (the "pros" in here may augment this) - if you're in the United States:

1. Don't transmit without a license.

2. If you are applying for an LPFM license and are waiting for a construction permit or action on the application - DO NOT BEGIN BUILDING YOUR STATION! You are only to do that *after* you have the construction permit in hand. It doesn't hurt to start planning - but don't start building.

3. If you are perusing catalogs for transmitting equipment - and you are going to use it as part of an LPFM station - the transmitter MUST be "FCC Type Accepted". The FCC will not grant exemptions to this.

Good luck.

Hello,

I am the CE of a small FM educational. We don't have much money, but have recently purchased a new transmitter and upgraded our processor from CBS gear to something a little more modern (1980's).

We're running a DBX 168 (average level processor), a CRL SEP-800 (4-band limiter), a Hnat Hindes stereo generator/clipper and a Mod Sciences Composite Clipper.

Our transmitter is a Nicom NT-300 we have a Belar FM monitor and Stereo monitor.

The Belar FM monitor (FMM-1) is indicating an average level of 90% modulation. We have been able to clip the audio to the point where the monitor can look like tone (with less than a dB of deviation). The audio is clean, but we are not as loud as the mod monitor would indicate.

If I increase the average level, the peak flasher starts to go off at 105%.

BUT

Checking the deviation meter on the exciter, even with the peak flasher going off, we are NOT near 75kHz deviation according to the exciter.

The Belar stereo monitor, in the TOTAL mode with the PEAK setting, the modulation looks about 5-10% lower than on the Belar FM monitor.

The Belar FM monitor was recalibrated by Belar in September 2001. Should I suspect it? I do not have access to scopes right now... when it was reinstalled with the new exciter, I did proof the system with borrowed scopes and it looked good... I am wondering if there is a problem... or... because it is an old monitor... I know some newer mod monitors (like the Belar Wizard and the Mod Sciences monitor) are more accurate allowing an extra dB or 2 of audio and still remaining legal because the peak detectors are more accurate.

Should I increase the modulation to reference 75kHz on the Nicom (where we sound as loud as others) or should I believe what the Belar is telling me?

The Belar indicates peak modulation, not loudness. Subjective loudness
is a very complex issue (Bob Orban has made a name for himself in the
world in part because of that very truth).

> because the peak detectors are more accurate.

The only difference between your Belar and the newer monitors is that it
does not intentionally ignore given amounts of peak overshoot. I would
trust its reading (especially if it has been recently calibrated) over
any meter on the exciter itself.

> Should I increase the modulation to reference 75kHz on the Nicom

I would get a "second opinion". Contact one of the engineers at a nearby
commercial station and get him to look at your signal with his frequency
agile monitor. If your Belar disagrees with what he is seeing, do a
Bessel null calibration on it. You will be able to look after your own
house from then on.

Are you running any SCA subcarriers?

>We have been able to clip the audio to the point where
>the monitor can look like tone (with less than a dB of deviation).
>The audio is clean, but we are not as loud as the mod monitor would
>indicate.

What is your station's format?

>If I increase the average level, the peak flasher starts to go off at
>105%.

If the monitor was recalibrated a year ago, it's probably reasonably
accurate.

What does your audio chain look like? How does your audio get from your
studio to your transmitter site? Are the Hnat Hindes and the composite
clipper (CP-803?) located at the studio or the transmitter?

I'm not familiar enough with the Nicom to know whether or not it might
ring. Try feeding a 100 Hz square wave into it and look at a trustworthy
receiver (not the FMM-1) to see if what comes out still looks like a
square wave. If you see any overshoot, and you are sure the receiver isn't
producing it, then it's likely coming from the exciter.

Of course, you'll need an oscilloscope to do this.

What are you running for a studio console? Does it contain any transformers?

Are you playing CD's? Vinyl? Hard disk audio? If hard disk audio, is it linear or MPEG? If MPEG, at what bit rate?

There is a trade off between loudness, brightness, and distortion. If your equipment is properly set up, you should be able to optimize any one of these at the expense of the other two. If the audio is clean to start with, you will be able to achieve more loudness at the same apparent brightness and distortion than if you start with dirty or compromised audio.

3357. New Dimension X radio story in OTR book coming out now!

Newsgroup: rec.radio.broadcasting
Date: 2002-11-26 03:41:24 UTC
From: JoeBev@comedyorama.com
Message-ID: <aruqh4lpv1@xuxa.iecc.com>
Source record: 9218

Robert J. Cirasa and I have just written a short story, based on the OTR series "Dimension X" and featuring my Willoughby and the Professor characters which appear in a new anthology book, entitled: It's That Time Again! The New Stories of Old Time Radio, scheduled to be published in mid-December 2002. The story we wrote is called "Willoughby Goes and Gets It." The concept for the story was to work within the more na&#65533;ve and wide-eyed science fiction style made popular in the 1950s while using original characters from our own current national public radio series, "The Whithering of Willoughby and the Professor." The result, we believe, is a both post-modern tribute to "Dimension X" and a story that holds up on its own merits. The book was edited by Ben Ohmart.

You can get a copy of this book at:

http://bearmanormedia.bizland.com/index/id18.html

Should make a great Christmas gift!

Joe

More details:

It's That Time Again!

Are you absolutely positive this isn't coming from the traffic signal
controller, which among other things employs microprocessors, triacs,
and RF metal detector loops? I, for one, have heard interference from
traffic signals long before the LED signals were employed.

Provided you're talking about writing and producing commercial advertising,
then if you ask me, your best bet is take one of the commercial classes with
Dick Orkin that Dan O'Day puts on each late-summer. You can buy the tapes for
the previous ones.

Good commercials are not about fancy editing or using the gear in novel ways
but relating to people.

If you're talking about something else, please disregard.

Amateur Radio Newsline Report 1320 - November 29, 2002

Amateur Radio Newsline report number 1320 with a release date of Friday, November 29, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. The International space station gets a new crew and all are ham radio operators. Newly licensed Solomon Island hams take on an emergency communications challenge and good news for a California ham. These stories and more are coming your way on Amateur Radio Newsline report number 1320 right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ALL HAM CREW ARRIVES AT ISS

The international Space Station has a new crew which plans to start operating the ARISS Amateur Radio station in about three weeks. They boarded the staton on Monday the 25th of November. They plan to be there for about 6 months. All three are licensed hams.

Look for Ken Bowersox KD5JBP, Nikolai Budarin RV3FB and Don Pettit, KD6MDT. They will use the Space Stations calls ... RS0ISS over Europe and NA1SS for the United States. Contacts can be heard on the downlink frequency of 145.80 MHz.

They replace Peggy Whitson, Valerie Korzun and Sergi Treschev. Valerie, RZ3FK, was very active, on the air almost every day, while Peggy conducted many memorable school contacts. (ARISS)

RESCUE RADIO: SOLOMON ISLAND NEWS HAMS PROVIDE DISASTER RELIEF

We reported their graduation last week. And while the signatures on their ham licenses may not yet be dry, a group of Solomon Island hams are already off on their first rescue radio adventure to Malaita Island:

--

Thats right Roy. Q-News reports that three graduates from the Amateur Radio Training School of the Solomon Islands have gone by ship to provide emergency communications for flood affected areas on Malaita Island, near Guadalcanal. With them are with 19 tons of rice along with officials of the National Disaster Council.

These new Hams will operate a ham radio station at the Red Cross clinic on South Malaita island. They will report on the distribution of supplies to the National Disaster Council HQ in the Capital of Solomon Islands.

This is the first humanitarian deployment of the school's initial graduates. It also provides the Solomon Island hams their first real experience in helping people with radio knowledge of Amateur Radio.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The three hams making the trip are identified as H44MKA, H44WSB and H44SF. As we go to air they should be operational from a Red Cross clinic set up on the south end of the island. More information is on the web at www.h44A.com (Q-News)

RADIO POLITICS: HAM CCR BILL DIES AS CONGRESS CONCLUDES SESSION

The 107th Congress has adjourned without taking any action on an ARRL sponsored legislative measure to free Amateur Radio of land use restrictions commonly known as C-C and R's. The ARRL indicates it plans to try again when the 103rd Congress convenes early in 2003. (ARRL)

**

RADIO AND THE LAW: CALIFORNIA SUPREME COURT SIDES WITH HAM

Still with antennas and land use, we have an update on the court battle of Mark Abrams, WA6DPB versus the city of Rancho Palos Verdes California. Amateur radio Newsline's Bruce Tennant, K6PZW, has the good news:

--

The good news is that the California Supreme Court has upheld the right of a California property owner to use antennas on his property for any reason he wants. It did so on Friday, November 15th when it denied the request of the the City of Rancho Palos Verdes to hear an appeal of the decision of the California State Court of Appeals in the case of The City of Rancho Palos Verdes vs. Mark J. Abrams. This means that the decision of the Court of Appeals is now state law.

The earlier decision of the said that Amateur Radio operators are entitled to an "exalted" status, thus giving amateurs new hope for getting antenna arrays approved. And Abrams says that there are many precedents that can be extrapolated from this ruling, but he says that the case clearly establishes that a city in California cannot tell a resident what to do with an antennas once they approve the actual array.

According to Abrams, the legal precedent applies only to California. But he says that when most states are looking to set a precedent, they will look to either California or New York. And since there is no precedent in New York on this subject, it makes California the one to serve as a guide to other states.

For the Amateur Radio, I'm Bruce Tennant, K6PZW, in Los Angeles. (WA6DPB)
--

Abrams tells Amateur Radio Newsline that he is now going to file with the Federal Court of Appeals to declare the City's appeal of his injunction against the City of Rancho Palos Verdes as moot.

RESCUE: ZL1AMO REPORTED ON LIFE SUPPORT
The Radio Society of Great Britain reports that well-known D-X'peditioner Ron Wright, ZL1AMO, has been taken ill. According to Wright's daughter Terri, her dad suffered collapsed lungs while in Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.
A later report from Terri Wright says that her father is currently in stable but guarded condition. The RSGB says that Wright had been operating from Fiji as 3D2RW. Regular updates on Wrights condition are being posted to the web at www.papays.com/opdx.html (RSGB, ZL2BHF)

**

ENFORCEMENT: EX-HAM ARRESTED FOR ALLEGED ATTACK ON POLICE OFFICER

A former ham who resigned from Amateur Radio has been arrested in the hills of North Carolina following a manhunt that has lasted over a year. Steve Anderson, the ex-AA8DP, is accused of shooting at a police officer.

Anderson was a member of the Kentucky State Militia, a civilian paramilitary group, until April 2001. As previously reported, that militia group dismissed Anderson because he refused to shut down his unlicensed radio operation. (Published news reports)

**

ENFORCEMENT: ATT FINED FOR TOWER VIOLATIONS

The Federal Communications Commission has released an order imposing a $117,000 fine against AT&T Wireless Services, Inc. for safety-related violations of the Communications Act and the Commission's antenna structure rules. This action follows routine antenna structure inspections and related investigations conducted by Commission field offices throughout the country.

Before issuing the fine the FCC determined that AT&T Wireless committed seven separate violations of the antenna structure requirements as outlined under Part 17 of the Commission's rules. Included were failure to register, light, and paint antenna structures, and failure to post antenna structure registration numbers at the base of the antenna structures. (FCC)

**

ENFORCEMENT: VICTORVILLE CA PIRATE STILL ON THE AIR

Another unlicensed station has been discovered in California. According to Chris Compton writing in the CGC Communicator, he noticed a pirate operating on 90.9 MHz in Victorville while driving through the town not that long ago.

Compton, who is a Director of Engineering said that the unlicensed transmitter was taking out KGZO on 90.9 MHz in Shafter. The pirate was also heard doing commercials for his Nextel Store in Victorville.

Now here's the best part. When Compton called the unlicensed operator, the person responded that he had a "demonstration license" from the FCC and that it was good for one year. He told Compton that the licensed allowed him to "demonstrate" the line of transmitters he was selling along with custom built antennas for the FM band. He then asked Compton if I wanted to buy one.

The first monitoring of the pirate was in September. Compton said that he reported the situation to the FCC. He adds that he was in Victorville not long ago and the pirate was still on-the-air. (CGC Communicator)

**

RADIO POLITICS: JONATHAN ADELSTEIN SWORN IN AS FCC COMMISSIONER

FCC nominee Jonathan Adelstein has been sworn in to fill the Commission's remaining open slot. Adelstein will finish out the term of former Commissioner Gloria Tristani, which ends in June.

According to the ARRL Letter, the White House nominated Adelstein last February. But the nomination of the Democrat and a prot,g, of South Dakota Senator Tom Daschle had been held hostage for most of this year because of political wrangling over several judicial nominations. (ARRL)

**
CONVENTIONS AND HAMFESTS: HAM RADIO UNIVERSITY 2003

LIMARC -- The Long Island Mobile Amateur Radio Club - will hold the 2003 edition of its very popular Ham Radio University on Sunday, January 19th. Location is the East Woods School in Oyster Bay New York with the doors opening at 8 A.M. Eastern Standard Time.

Ham Radio University is a day-long session of intensive training in just about every aspect of Amateur Radio. The focus will be "hands on" with many demonstrations. And this year there will be special forums geared to the non-ham as well as the experienced ham radio operator.
There will also be a V-E testing session for those who would like to take an FCC exam and a Special Event Station set up and operational on the High Frequency bands.

Ham Radio University is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. For more information about Ham Radio University please contact George Tranos by e-mail to N2GA@arrl.org. (LIMARC)

**

GATHERINGS AND MEETINGS: MORSE CAMP IN THE U-K

A Morse code training camp is planned for the weekend of the 11th and 12th of January 2003 in the United Kingdom. The venue will be The Beacons, Simons Lane, in the town of Frodsham. For further details please contact either Catherine Pearson at RSGB HQ or Kath Wilson, the RSGB Regional Manager for North West England. Pearson can be contacted on by e-mail: toar.dept@rsgb.org.uk. Wilson can be reached at dwilson@btinternet.com (GB2RS)

HAMVENTION 2003: "THE YEAR OF THE YOUNG"

The 2003 Dayton Hamvention will have "The Year of the Young" as its overall theme. Planners say that the show's focus will be on the young ham and on bringing 12 to 18 year olds into the Amateur Radio hobby. More information will be posted on-line at www.hamvention.org as soon as final plans are made firm. (Dayton Hamvention*f*)

**
EMERGING TECHNOLOGY: MICROSOFT EASES RESTRICTIONS ON NEW XP MEDIA CENTER

Microsoft says that it will relax restrictions on how users of its new multimedia Windows XP Media Center operating system will be able to copy and distribute TV programs. As a result of the changes, users will be able to view unprotected TV programs copied onto DVD on any PC with Windows XP Media Center Edition. TV programs with built-in copyright controls will still prevent users from making copies.

Originally, Microsoft had developed the software so that users could only watch television programs stored on the hard disk or copied onto a DVD on only one machine. That being the PC used to record the original content. (Microsoft)

**

OUR HERITAGE: REMEMBERING THE RADIO OPS OF WWW2

The event that lead to the United States becoming involved in World War 2 will be commemorated by Amateur Radio. This, as a group of survivors of the Japanese sneak attack on Perl Harbor visit the USS Hornet and take to the air this coming December 7th.

The SSB Frequencies will be 7.260, 14.320, 21.320 and 28.320 MHz. CW operations will be found on 3.530, 7.030, 14.030, 21.030 and 28.030 Mhz. Operating hours will be from 0900 to 1700 Pacific Standard Time. A special QSL Card will be made available for those who make contact. (KB6SSN)

**

INTERNATIONAL - CANADA: VC2C ON 60 METERS

An update on whats become an international version of the U-K five megs experiment. Word from Canadian that station VC2C was recently given special permission by the Canadian radio authorities to operate on the 60 meter band. It took to the air between the 21st and 25th of October. During that time, VC2C made two-way C-W contacts with four G stations, one GM and one GI operator. All contacts took place on 5.280 MHz. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: NZART CALLS FOR ELECTIONS

New Zealand's national ham radio society, the NZART has placed a call for nominations for those who want to serve on the Council and as the organizations President. NZART says that New Zealand hams have until December 31st to file their nominations. (NZART)

**

ON THE AIR: WSWSS 2 METER NET GOES PSK-31

A popular weak signal net is going digital check-in. David Peters, KI6FF, says that the Western States Weak Signal Society 2 meter Southern California Technical Roundtable net held Tuesdays at 8:30 PM Pacific on 144.130 MHz is going PSK 31 only for check-ins. Once the

evenings roster is complete the net will move to SSB and help people who need to get their equipment and software setup and checked out. (VHF REflector)

**

DX

In D-X, word that G0UIH will be in Australia and active as VK2IAY/P until the 15th of December. During this period, Steve will operate from several different rare IOTA island groups. Look for him on or around 14.260, 18.145 or 21.260 MHz on SSB only.

And NK3T will be active from McMurdo Station Antarctica as KC4 slash NK3T until late January or early February. QSL via his home call.

Also, special event station ER60SB will be on the air from the 23rd of January through the 2nd February 2003. This to commemorate the 60th anniversary of the Battle of Stalingrad. QSL via ER1DA either direct to Valery Metaxa, ER1DA, P.O. Box 3000, Chisinau, MD-2071, Moldova or via the bureau. (This weeks DX courtesy GB2RS)

**

THAT FINAL ITEM: FIGHTING BACK WITH A PHONE

And finally, here's one from the pages of the French e-magazine La Companion that we found surfing the Internet. Its the story of fighting back with a cellular telephone. Amateur Radio Newsline's Norm Seeley, KI7UP, has the curious details:

--

Maybe its all net-lore, but supposedly a female bus rider in a Paris suberb was annoyed by a loud-mouthed cellular telephone phone user a few rows in front of her. The fellow so boisterous that she could not even hear her companion seated right next to her.

Then the cellular bully supposedly made the mistake of mentioning his cellphone number during the conversation. A few minutes later, the lady picked up her own phone, called the man and asked him to: "...be quiet please".

But he refused. In fact he was so incensed by the call that he started to use all kinds of unsightly language. That is until he finally realizing where he was and that everyone on the tram was staring directly at him.

Undaunted, he supposedly stood up, uttered a few more choice words and exited at the next stop. The woman and her companion received a round of applause.

For the Amateur Radio Newsline, Norm Seeley, KI7UP

--

And what else needs be said! (Tommorrows Technology)

> Mr. Higdon brings up a good point. Any chance of standing next to the
> control box and see if you can hear any similar noises?

The interference is at its strongest with the car's antenna directly underneath the offending traffic signal light. The AM noise/static that is generated by the LED signal may only radiate within about a 10-foot radius of the signal, but it is still enough to be very annoying, especially since most intersections have two signal stalks (one on either side of the intersection) so you will hear two bursts of interference on the radio as you drive past.

3372. Radio Jingle - "Dee Jay"

Source record: 9237

http://www.rwonline.com/reference-room/special-report/01_rw_ams_1.shtml

One of the things I noticed was ...

"AM audio fidelity also would be improved with the elimination of asymmetrical modulation processing, which inherently distorts the audio waveform and often can introduce inconsistencies in loudness between male and female voices. "

I guess if you have "The higher modulation capability would provide up to 6 dB of greater loudness, improving the effective signal-to-noise ratio in the receiver. " then asymmetric operations won't be as important, but I believe the new AMS system would preclude such processing. Otherwise, AM stations would use it to make their stations even louder.

OTOH if AM stations were to switch to symmetrical modulation processing, the sound could approach high quality albeit a tad quieter. But then again they could clip it to death and have it really loud.

Just my 2¢, your opinion may vary.

The place to start is the question "WHERE?"... There are 5kw AMs available in many markets. There are also some FMs available. The only problem you are going to run into is that all frequencies have been taken (for many years) in major metro areas. In those areas, expect to spend a big pile of dead presidents to buy a station. (That's about the only way to get one these days..)

Considered cable casting? Go to your local cable provider, and ask how much to rent FM space there.

Hi,

I do believe that the only efficient computer based radio system for
broadcasters would be a "database driven networked software system",
including "assets management". All "major" DTR (DeskTop Radio) firms
use this technology. Presently they are quite an expensive
proposition. I know how to build such a system for much much less.

I would like to start a DTR firm and I am looking for
partner(s)/investor(s).
A new line of products may be available for the next NAB exibit.

The system will include:
Audio players, recorders, and editors
ON AIR Automation
Database MetaData (info about audio files) management
Network capability
System remote control capability
Our target price would be around: $100 -> $500 per site

Amount needed: $10 000

DTR FIRMS:
http://www.dalet.com (solutions -> radio solutions)
http://www.netia.net/site_netia/mainus/radio/radio_assist7/radio_assist.php
http://www.radioman.fi (products -> Jutel RadioMan)
http://www.david-gmbh.de/English/index3.htm
http://media.vcs.de/en (products -> Dira)
http://ptophetsys.com (ProphetRadio)
http://www.mediatron.com

Hardware:
http://www.broadcasttools.com/
http://www.rdlnet.com
http://www.videoquip.com/
http://www1.leitch.com/
http://www.radiosystems.com (StudioHub)

I am working since 22 year for a major radio broadcasting network in Canada. I am presently one of the users support for a 440 user DTR (DeskTop Radio) system (one of my jobs...). I am on the selection/evaluation comitties for DTR systems. I am an engineer in electronics specialized in digital systems (automation, processing and remote control). In 2001 I received the an award (outstanding technical achivement) for the design of a transmitter remote control via satellite used for special news bulletins on the network. I also

design and built a remote control and automation system for all satellites transmission of a northern radio network. Graduated from l'�cole de Technologie Sup�rieure in Montr�al, I am a senior member of l'Ordre des Ing�nieurs du Qu�bec. This professionnal association has one of the most rigourous code of ethics.

If your are interested in the project, you may write to:

Eric,

Thanks for your reply
Sounds like good honest advice to me.
Where are you located?

My intent is to find the (probably) small group of people that can trade notes in positive ways to improve the quality of what they're doing.

In my small town of Astoria OR I possess the good fortune of making (almost) everything work for clients.
we have six reps, all keep me busy. I am fortunate in acheiving close to 100 per cent client satisfaction.
It takes a large portion of my time but I love it.

I start with the facts then decide production direction. I am trusted by clients.
They have a lot more faith in me that I do.
Sometimes those ideas are like giving birth.
I don't have anybody to trade notes with here.
It's the first technical job I've experienced where I'm the guy everyone else goes to for advice.
I've got a lot to learn yet, therefore the thought of trading ideas.

Thanks
Roy

3384. question on advertising music

Newsgroup: rec.radio.broadcasting
Date: 2002-12-02 21:04:21 UTC
From: mary <tombates@city-net.com>
Message-ID: <asghsl$221$1@xuxa.iecc.com>
Source record: 9239

How would one find out the name of the background music used in a national ad? It is an ad for McDonalds, and the music sounds like it is from the musical "Cats."

Thanks

Tom

3392. Part ownership in AM radio station in Idaho for sale/The Radio Crazy is back!

Newsgroup: rec.radio.broadcasting
Date: 2002-12-04 14:03:55 UTC
From: Meyer Gottesman <wrecktech@yahoo.com>
Message-ID: <asl20b$5p5$1@xuxa.iecc.com>
Source record: 9157

Part ownership of fulltime AM radio station in Idaho
for sale.

The "Radio Crazy" is back!

$85,000 full asking price. No real estate. Station on
air since the 60s of the last century!

Application on file with FCC to incrase to 50 KW days,
nondirectional with 16 watts nights. Also non-DA.

This would become the 2nd most powerful daytime AM
signal in Idaho!

Presently 1 KW fulltime on class IV (Now called class
"C" by the Friendly Charg-U Corporation!)

Active/inactive investors with at least $10,000 each
are welcome. All investors would be on the board with
full voting rights, if desired. All funds would be
held in escrow by an FCC attorney. I am not buying a
one way ticket to Brazil!! LOL!

Call (478)741-1710 or email: wrecktech@yahoo.com for
more information.

73,

Meyer Gottesman, W6GIV
Macon, GA

That was a beautiful jingle used by a number of stations, including KVI Seattle and KOB Albuquerque somewhere about 1960-64. KVI even gave out 45rpm records of the jingle to their faithful listeners.

I don't care, but no-code makes it easy to have a 100% ham crew as a PR move.

If you need code, each would have spent some time preparing for the exam, which indicates an actual personal interest; more time than a PR department would be willing to spend. It would be a ``waste'' beyond reason.

My own opinion is that the code is quite musical, sent right, as a matter of aesthetics. Nobody at all will know that in a couple generations. But there's no point in insisting on a tradition that nobody's choosing.

Exchanging a 1,000 watt full-time operation on 1400 for a 50,000 watt (day), 16 watts (night) operation on 1420 seems a little strange, at first.

However, a brief examination of the use of 1420 in that region would seem to make the following moves make sense:

1) 50,000 watts, days, to establish a daytime prority, thereby blocking any similar move by the dominant station in that same region, KUJ in Walla Walla, WA, and

2) getting as much power nights as is possible with two or three towers, hopefully enough to block out the interference which will be received from the new 10,000 watt (day and night) station which is allocated to Calgary (and also any interference which may be received from KUJ's 5,000 watt night operation).

3402. Worldspace

Newsgroup: rec.radio.broadcasting
Date: 2002-12-05 23:15:18 UTC
From: Mike Terry <miketerry@ukrivals.net>
Message-ID: <asomm6$8qv$1@xuxa.iecc.com>
Source record: 9164

>From http://www.carolinesouth.com

What Is Worldspace? Quite simply it is one of the most exciting developments in radio technology in recent times! It is a portable radio with the normal FM, Medium Wave and Short Wave bands PLUS a satellite band which enables you to listen to digital quality international radio stations AND specialist music channels throughout Europe, Africa and Asia.

How easy is it to receive the satellite channels? It is very simple. In addition to the usual telescopic aerial for FM and Short Wave reception, and the internal medium wave aerial, there is a convenient flap antennae for the satellite reception. Just flip it up and point it at the satellite and up comes a large selection of radio channels.

The receiver must be able to 'see' the satellite. In Europe this means pointing the receiver towards the South. It is very uncritical, which means that you do not need to be an expert to set it up, and the signal stays even if you turn the receiver through a wide angle and tilt it. This makes it ideal for maritime use. The receiver also works through a glass window, and if you want to take the receiver further inside, it is very easy to detach the satellite 'flap' antennae and attach it to the receiver with a 5m extension lead which comes as a standard accessory with the Hitachi receiver pictured here. It is a robust and high quality receiver produced by one of the world's leading electronics manufacturers.

There is a digital readout and memory buttons so that you can easily choose your favourite radio stations whether they are on the Worldspace band or the conventional FM, Medium Wave or Short Wave bands. It works off batteries or mains electricity and is completely portable. There is a headphone output and a line output so that you can listen to Worldspace through a Hi-Fi system as a tuner. Most of the music channels broadcast in digital stereo.

Where can I hear the Worldspace Programmes? The Worldspace receiver works around the world with it's conventional FM, Medium Wave and Short Wave bands, just like any other quality radio receiver. The Worldspace bands will pick up a wide variety of international radio stations and specialist music channels throughout Europe, Africa, Asia and shortly Central and South America with the launch of the Ameristar satellite.

Radio Caroline is among a spectrum of prestige broadcasters listed below that can all be heard on the three beams of Worldspace's Afristar satellite which gives good digital quality reception throughout Europe, Africa, the Middle East and West Asia (see coverage map on the left.)

Many of the stations can also be heard on Worldspace's Asiastar satellite. For more details on this service and the Worldspace system visit the

Worldspace Web-site.

The extensive international reach of the Worldspace system makes it ideal for frequent travellers, expatriate communities, members of the armed forces, yacht owners and crews and anyone who wants to own a state of the art radio which receives all of your favourite local stations and a wide selection of channels exclusive to Worldspace.

News, sports, finance and specialist music channels including pop, rock, dance, classical, opera, country, Jazz, R&B, African, Latin American, Golden oldies and much more. Check out the list of channels available on Worldspace's Afristar satellite below.

What radio channels can I hear on the Worldspace band?

Radio Caroline* The legendary pirate radio station continues with it's unique mix of quality album music old and new. The musical antidote to the repetitive play-lists of latter day local commercial radio!

BBC World Service** The world leader in international news, information and entertainment.

National Public Radio (NPR) * a leading provider of news and entertainment radio programming in the United States.

CNN-I The radio version of the US's pioneering TV news channel, CNN.

Bloomberg The radio version of this leading financial news provider.

World Radio Network (WRN) 25 of the world's leading public broadcasters including English language programmes from Australia, Belgium Canada, China, Denmark, Holland, Hungary, Ireland, New Zealand, Poland, Russia, Sweden, USA, Wales and the Vatican.

Radio Voyager Hot American Contemporary Hit Radio

Exclusive Worldspace Non Stop Music Channels - Orbit Classic Rock - Maestro Great Classical Music - Riff Cool Jazz - The Hop Golden Oldies - Bob Alternative Rock - 24x7 Dance & techno - Potion The best R&B and soul - Up Country All Country music - Ultrapop The hottest chart hits - Ngoma Hot African music - Oyeme - Tropical Latin rhythms

International Pop Channels - Radio 1 (Lebanon), Capital (Ankara), HitMix FM (German/English)

The Weather Channel - Rolling weather bulletins for Europe, including regular shipping forecasts

French Language Channels - Europe 1, WRN-Fr, Canal EF, RFI, Bloomberg French

Italian - Radio Dimensione Suono, Italy's leading national adult contemporary radio network

Spanish - REE External service of Spain's national radio

Switzerland - Swiss Public Service International broadcaster RSI/RTS

Arabic Channels - Medi (Casablanca), Haneen, Killamus.

African Channels - Kaya (Johannesburg) , Congo BZV, KBC (Kenya), Walf (Senegal), Yoon WI

Indian Languages - Metro East FM, based in Nairobi broadcasting to Africa's Asian population. Radio Asia - Paris based Tamil station serving Africa.

* Radio Caroline and National Public Radio are optional extras available with a modest annual subscription fee. See below for a special all inclusive offer with the purchase of a new Worldspace receiver.

** African stream of BBC World Service. Some local African news replaces local European news programmes.

I think it was KKCY, might have been 98.9 but not sure
>>

KKCY/98.9 is now part of the dual-channel operation of K-SOL.

The "other half", 99.1, was originally KSCO-FM (Santa Cruz), later KLRS-FM (also Santa Cruz, under Fuller-Jerrfey, IIRC), and then "Double 99", as a rocker (can't remember the calls), before KSOL moved from 107-something to 98.9/99.1.

Current calls are: KSOL, San Francisco and KZOL, Santa Cruz.

KSOL is 6 kW, omni, with a 400 meter high antenna, but KZOL is 1 kW, directional, with an 800 meter high antenna (on Loma Prieta, the dominate peak, and an extinct volcano, high in the Santa Cruz Mountains).

Digital broadcasting is going to be a triple-nightmare.

1) It will obsolete virtually every radio in current service (millions of
them in cars)
2) Anyone with even a basic understanding of Engineering will tell
you that digital wireless signaling is inherently rich in harmonics and
is a
"real bitch" to reduce transmitted RFI and shield from the same.
3) Digital broadcasting requires much higher RF Power to ensure receivers
"hear" the signal - one missed byte and it goes dead.

Digital Radio (and it's cousin HDTV) is the MOST FLAWED broadcast
plan to come down the road. Consumers will reject it. It's more expensive.
In some cases you will need to pay a *monthly fee* to receive the broadcast.
It will destroy the whole fabric of AM and FM radio for the majority of
consumers.

In short - IT STINKS. The worst idea since "New Coke" and the Yugo Car.

For the Worldspace web page http://www.worldspace.com/

Be aware that their South American coverage is in "someday" status. Probably a long time coming.

I've never quite understood why Worldspace is headquartered here in Washington, DC, USA, since they don't broadcast to this part of the world.

There was some initial connection between them and XM Satellite Radio, which covers the USA, but that disolved long ago. XM is also in Washington, DC., as is National Public Radio, and of course the VOA. These four organizations employ a number of air personnel who used to be on our local stations.

No, you use smooth basis functions. The meanings are digital but the
digital medium is nicely engineered analog.

The meanings finally convert back to digital, and then decoded again, in the receiver.

In principle, you'd be transmitting digital if your scheme were just to have
J Vernon McGee reading one's and zero's in voice, and your receiver used voice
recognition software to decode it into binary for a d-to-a converter. The bandwidth
would be a little low, is all.

Compatibility would not be a problem that way either, and you wouldn't need the
sideband tripling.

Jean Shepherd used to send Morse code on a kazoo, which is also digital, WOR's
first digital experiment in fact, a mode not in the FCC list.

Only until the analog side is sunset, at a time to be determined in the
future, IIRC. Eventually stations are supposed to go "all digital...."

Then again, I read an article in Current that talked about stations
maintaining the analog/digital hybrid mode in perpetuity (at least on
the FM side, don't know about AM).

If *that* is true, then we're not getting "digital radio," are we? We're
getting an analog signal with two digital sidebands saddlebaged onto the
carrier.

Smells like a way to break into wireless ISP service, or a way to crack
the "pay per view/listen/download" market. DTV stations are already
doing this, and two technologies are being rolled out:

WebHopper (a Clear Channel idea) offers 256kbps download speeds to
residential customers and 768kbps download speeds to business folks.
Theirs is more like a one-way DSL or cable modem.

iBlast, (a product funded by a large consortium of media companies who
hold 260+ stations between them) can allegedly serve up 75GB a day per
station.

Wonder how well the technology will port to IBOC - ahem - "HD Radio."

This is what they mean when they talk about "convergence" - it has
nothing to do with being a broadcaster, this is for sure.

Of course - but it seemed a little odd that such an outfit would be here. After I sent my message I looked at their Board of Directors listing. Now I understand the DC location. Most of the Board are DC-area people, except for the honcho of the Nobel family interests. You've heard of the Nobels - the prize and all. They probably have a lot of money in WorldSpace.

Most of the rest of the Board members don't sound like people with a lot of money One - my ex-Congressman / Senator - was never in politics for the money.

Yes but its still a good question, why are they incorporated in the USA?

I quote from http://www.worldspace.com/about/history.html
WorldSpace Corporation was founded in 1990 by Noah A. Samara, Chairman and CEO, with a vision to provide digital satellite audio, data, and multimedia services primarily to the emerging markets of Africa and Asia. To implement this vision, WorldSpace conceived of and built the first ever satellite radio infrastructure in the world. In the past 12 years the company has built three satellites and launched two to provide audio, data, and multimedia broadcasting coverage to Africa, Asia, The Middle East and Western Europe."

No mention of the USA there...

If you were right, I wouldn't object to HD radio, but the digital part of the signal extends into the adjacent channnels. There is nothing "In Band On Channel" about it.

I have no objection to the concept of digital radio. I just think this is the wrong way to go about it.

There is no timetable or noce of intention to make stations go all digital.

Analog is 24/7 on AM and FM. Digital is 24/7 on FM, and daytime only on AM
at present.
>
> Then again, I read an article in Current that talked about stations
> maintaining the analog/digital hybrid mode in perpetuity (at least on

There is no regulation. IBOC is optional, and probably always will be since
it requires the station to pay a fee.
>
> If *that* is true, then we're not getting "digital radio," are we? We're

No, we are getting separate digital and analog signals on the same
frequency. Each is created by a separate transmitter or exciter and
combined.
>
>
> Wonder how well the technology will port to IBOC - ahem - "HD Radio."

Not enough bandwidth to do that and program at the same time, especially on
AM.

There is no relationship between the ownership of XM and Worldspace; due to
some unseemly events at Worldspace, XM bought out their shares well before
the official launch of the service.

3429. OTR-style live rado theater of "Willoughby and the Professor"

Newsgroup: rec.radio.broadcasting
Date: 2002-12-08 01:58:38 UTC
From: JoeBev@comedyorama.com
Message-ID: <asu90e$jq9$1@xuxa.iecc.com>

Hey!

I thought you'd like to hear a recording of a performance we gave of "The Whithering of Willoughby and the Professor: Their Ways in the Worlds." It was broadcast during the WKNH Radio Theatre's "Sounds of the Season", a live radio show, which aired on Sunday December 1, 2002 from 6-8PM, before a studio audience at the Night Owl Cafe in Keene, New Hampshire.

As you listen, keep in mind that my talented husband, Joe Bevilacqua did all the voices ***live*** on the air in front of an audience. Pretty darn amazing! (Well, he has been doing variations of these characters since he was 12 years old.)

I did all the sound effects, including the sound of the camel's bleat. The Professor's echo is courtesy of a coffee can placed in front of Joe's face. The script was co-written by Joe with Robert Cirasa. The theme music was written by David Garland. The live broadcast was produced by Janine Preston (aka "Ginger").

Our "Willoughby" segment runs 11 minutes.

You can hear the performance (and even see a few photos of it!) by going to our homepage:

http://www.comedyorama.com

and clicking on the LISTEN NOW icon.

Happy Holidays!

Motorola had more money and more political clout. It was the "best
government money can buy" thing. I ran Kahn for several years at XTRA,
San Diego. It was wonderful.

Rich

Amateur Radio Newsline=E2=84=A2 Report 1321 =E2=80=93 December 6, 2002

Amateur Radio Newsline report number 1321 with a release date of Friday,
December 6, 2002 to follow in 5-4-3-2-1. =20
=20
The following is a Q-S-T. North Korea takes its only ham off the air and=
the
first digital voice Q-S-O across the Atlantic. These stories are first o=
n
Amateur Radio Newsline report number 1321 coming your way right now. =20

(Billboard Cart Here)=20
=20
**

INTERNATIONAL =E2=80=93 N. KOREA: LAST HAM FORCED OFF THE AIR=20

The Peoples Republic of Korea appears to no longer want Amateur Radio ope=
rating
from its soil. It made its intention clear when it asked its only ham it=
o pack
his gear and send it out of the country. Jeramy Boot, G4NJH, in Nottingh=
am
England has the details:

--
Ed, P5/4L4FN, the only radio amateur operating legally from North Korea, =
has
had to close down. On the evening of the 22nd of November, Ed was called =
into a
meeting with the North Korean Radio Regulation Board. Without any explana=
tion
he was politely asked to stop all transmissions and to pack up all his ra=
dio
equipment.=20

Ed spent the following day dissembling his antennas and packing boxes. Th=
at
afternoon government officials sealed all the boxes and Ed has been told =
to
take everything out of the country when he leaves North Korea for a two-w=
eek
holiday on the 10th of December.=20

Jeramy Boot, G4NJH
--

With Ed now off the air, ham radio is gone from North Korea and nobody ex=
pects
it to be resumed anytime in the near future. It also puts North Korea ba=
ck
near the top of D-X=E2=80=99ings most wanted list. =20
More on this story is at www.amsatnet.com/p5.html. (RSGB)

**

EMERGING TECHNOLOGY: DIGITAL HAM AUDIO SPANS THE ATLANTIC

Two ham radio communications pioneers have achieved a major breakthrough.=
The
first two-way digital voice transmission across the Atlantic via Amateur =
Radio.
Norm Seeley, KI7UP tells us who did it and how it was accomplished.

--
Doug Smith, KF6DX, and Didier Chulot, F5MJN, have successfully transmitte=
d and
received HF digital speech signals between Sevierville, Tennessee and P=
aris,
France. It happened on Friday, November 22 nd. =20

The first historic contact took place on 21.218 MHz in the 15 meter band.
Chulot spoke with Smith for several minutes using a high-frequency digita=
l link
within a 3-kHz bandwidth. Signal strengths were S-5 to S-7 and readabilit=
y was
solid in both directions.=20

The feat was accomplished using Ten-Tec transceivers and digital audio sy=
stems
from Thales Communications. =20

--
DEMO AUDIO HERE
--

The Q-S-O demonstrated the advantages of digital audio for two way radio.=
This
includes noise-free, FM-like reception and the potential for simultaneous=
voice
and data exchange.

With an eye toward the digital future of Amateur Radio, I'm Norm Seeley, =
KI7UP.
--
=20
The Ten-Tec/Thales system used in this experiment is based on a new
international broadcasting standard for digital radio adopted last year b=
y the
International Telecommunications Union. The FCC has approved a similar
standard for broadcasting in the United States. An Amateur Radio version=

is
expected to appear on the market sometime in 2003. (KF6DX, Ten-Tec)

**

EMERGING TECHNOLOGY: PPW PROPOSES ELECTRONIC INFRASTRUCTURE TO WARN PUBL=
IC OF
DANGER

A group of U.S. communications security experts has recommended that Ame=
ricans
be alerted to impending danger over their wireless devices. Amateur Radi=
o
Newsline's Fred Vobbe, W-8-H-D-U, takes a look at this new concept in eme=
rgency
notification:

--
The Partnership for Public Warning says that a national wireless system c=
ould
send alerts to citizens via their pagers, mobile phones or computer scree=
ns. =20

The Partnership for Public Warning is a newly formed thirty-member adviso=
ry
body that includes representatives of government agencies, relief agencie=
s and
even a ham radio operator. And on Monday, November 25th it released a re=
port
that says conventional media broadcasts may spread alerts too slowly in
instances of pending natural disaster or terrorist threat. =20

P-P-W says that the newly formed Department for Homeland Security should =
take
responsibility for leading development of a national all-hazard public wa=
rning
architecture. This, in partnership with other federal agencies, state an=
d
local governments, industry, universities and other stakeholders. The
technology itself would be produced by private industry with the alert sy=
stem
operated by governments and selected other organizations following a stri=
ct set
of alert protocols.=20

P-P-W says that improved warning systems and procedures will reduce loss=
es
from natural and man-made disasters, and will speed recovery. Most impor=
tant
is that it will save lives.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

President Bush cited quick responses to attacks as a priority of the new
Department of Homeland Security which will consolidate parts of 22 depart=
ments
to better prevent attacks in the wake of the September 11, 2001 terrorist
attacks in which some 3,000 people died. =20

information about the Partnership For Public Warning is on the web at
http://www.partnershipforpublicwarning.org/ppw (Published reports)

**

HAM RADIO GROWTH: GOOD NUMBERS TO US

The folks on that "other band" might call this =E2=80=9Calmost good numbe=
rs.=E2=80=9D This
with word that the number of radio amateurs licensed by the Federal
Communications Commission is at a five-year high. But there are some cav=
eats.=20
Bill Pasternak, WA6ITF, has more:

--
According to the CQ Magazine website, FCC numbersshow a total United Stat=
es ham
population of 684,498 as of October 31st. And breakdowns provided by Joe
Speroni, A-H-Zero-A, say that the primary growth has come among Amateur E=
xtra
Classand General Class licensees. Extra is now breaking the 100,000 poin=
t for
the first time.

Technician Class figures have essentially held steady. Also we had 20,00=
0 new
hams entering the hobby in the year ending October 31st.=20

License renewal statistics were also encouraging with the renewal rate cl=
imbing
from an abysmal 45% two years ago to a better, but still unacceptable, ra=
te of
55% in the past year.=20

Better numbers, but not the best.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles. =20
--

More on licensing figures are on the web at www.speroni.com/fcc (CQ)

**

HAM RADIO IN THE PUBLIC EYE: THE ATLANTC MONTHLY

The November 26th edition of Atlantic Monthly Magazine On-Line has some g=
ood
words about ham radio and its role in homeland security. In an article t=
itled
America's Secret Weapon in the War on Terror, one of the groups singled o=
ut for
attention is the nations corps of Amateur Radio operators. Its described=
in
the article as an ever-ready line of emergency communications.

The story goes on to say that America boasts 650,000 licensed ham-radio
operators. It quotes he ARRL's Mary Hobart as saying that about 1,500 of =
them
are fully certified in emergency communications and are prepared to rush=
to
the scene of a forest fire, flood, or hurricane with a jump bag full of
portable radio equipment. And says Hobart, That can be crucial.=20

Atlantic Monthly notes that when phone lines, radio towers, and even =
=20
satellites go down, ham operators -- broadcasting each to eac=
h
other , and operating on batteries or generator -- stay on the air. And =
says
Atlantic Monthly, after the terrorist attacks of 911 when New York's cell
phones turned into paperweights hundreds of hams, some from as far away a=
s
Texas and California, turned out to provide radio lifelines for emergency
workers and relief agencies.

The article is must reading for everyone involved in Amateur Radio public
relations. It can be found at the U-R-L listed in this weeks Amateur Rad=
io
Newsline print edition.

The complete article is at
http://www.theatlantic.com/politics/nj/rauch2002-11-26.htm (KS2G)

**

ENFORCEMENT: FCC INVESTIGATING INTERFERENCE TO EMERGENCY TRAFFIC IN LOS
ANGELES

The FCC is looking into allegations that two Los angeles area hams interf=
ered
with a distress call on an area repeater. The FCC's Daryl Duckworth, NN0=

W
explains:

--
"The Enforcement Bureau has opened a case involving allegations of delibe=
rate
interference to emergency communications on the N6SAP repeater in the Los
Angeles area. Anton W. Johnson, N6OAY, and Ledge Musselman, KC6NCN, are =
being
asked to explain the allegations of the operations on October 2.

Information is also being sought from the repeater licensee. Scott Press.=
=20

This mater is being taken very seriously by the Enforcement Bureau since
emergency communications is one of the foundations of Amateur Radio."
--

The FCC claims that Johnson and Musselman interfered with attempts to rel=
ay
emergency traffic on the 147.435 repeater at about 9:45 a.m. on October 2=
nd.=20
Press is being asked to explain what action he is taking in this matter. =
He is
also been directed to summarize any conversations he may have had with th=
e
licensees against whom the allegations have been made. The FCC says that=
Press
must also provide any written correspondence he may have sent to Johnson =
and
Musselman. All three were given twenty days from he date of the FCC lett=
ers to
respond.

**

ENFORCEMENT: THE STORY OF THE EX-AA8DP

A follow-up now to last weeks report of the capture of Steve Anderson, th=
e ex
AA8DP. Anderson was wanted in connrection with an alleged attack on a po=
lice
officer. He was arrested in the hills of North Carolina following a man=
hunt
that has lasted over a year. Amateur Radio Newsline's Henry Feinberg, K2=
SSQ,
has the story of how Anderson was caught:

--

A tip to the Fox Television program "America's Most Wanted" and forwarded=
to
federal investigators has led to the arrest of Kentucky fugitive Steve

Anderson, the ex-AA8DP. Anderson, an alleged white supremacist who resig=
ned
his Amateur Radio license almost two years ago and then operated an unlic=
ensed
radio station from his home, had been at large since October 14th of 2001=
. =20

According to the Louisville Courier-Journal, Anderson was arrested in the
mountains of southwestern North Carolina by the Bureau of Alcohol, Tobacc=
o and
Firearms and the North Carolina State Bureau of Investigation. The A-T-F=
's Don
York told the newspaper that America's Most Wanted received a tip abo=
ut
Anderson's whereabouts after airing its second segment on him about a mon=
th
ago. The tip was forwarded to the A-T-F, which worked the case with North
Carolina authorities.

Anderson is accused of shooting an automatic weapon at Deputy Scott Elde=
r.=20
This, after Elder had pulled Anderson's truck over north of Middlesboro
Kentucky for a traffic violation. Elder was unharmed after Anderson alleg=
edly
opened fire, but his police cruiser was struck about two dozen times. P=
olice
said Anderson then drove into the mountains, and a search of his property
turned up explosives and guns.=20

Anderson had attracted attention of authorities several years ago by play=
ing
host to a small Ku Klux Klan rally during which a cross was burned. He a=
lso
allegedly operated a shortwave radio station out of his home, where his
commentary against minorities, immigrants and the government drew the att=
ention
of the Federal Communications Commission. The Anti-Defamation League
complained to the FCC about Anderson's broadcasts which were taking place=
in
the Amateur bands. Rather than explain his actions, Anderson sent in his =
AA8DP
license for cancellation. It was accompanied by a rather convoluted mess=
age
that said he did not recognize the licensing authority of the FCC which h=
e
called an agent of a foreign power. =20

Anderson continued to broadcast but bowing to extensive pressure from the
nations ham radio community, he took the transmissions out of the Amateur
service bands. They stopped after he disappeared following the alleged a=
ttack

on Officer Elder.

For the Amateur Radio Newsline, In Henry Feinberg, K2SSQ.
--

As previously reported, the ex-AA8DP had been a member of the Kentucky S=
tate
Militia until April 2001. That group dismissed Anderson because he refu=
sed to
shut down his unlicensed radio operation. (ARNewsline(tm) from published
reports)

**

THE INTERNET VS. HAM RADIO: HOTMAIL AND JUNO BLOCK ARRL E-MAIL FORWARDIN=
G

If you get your e-mail using the American Radio Relay League's @arrl.net =
vanity
address, and use Juno or Hotmail as your account you know that you were c=
ut off
for a few days. It wasn=E2=80=99t the ARRL=E2=80=99s doing. Blame it on=
the twi internet
service providers.

According to an ARRL bulletin the two companies notified the League on No=
vember
25th that they had stopped accepting e-mail messages forwarded to users o=
f
their services from the arrl.net e-mail server. According to representat=
ives
of the two companies, this was part of heir solution to the Internet-wide
problem of spam. =20

The ARRL, through the vendor for the arrl.net server began working with=
both
companies to resolve this matter. The ARRL and Hotmail reached a accord =
the
fllowing day and service was restored. Juno was back late on Monday Dece=
mber
2nd. During the peak of the service outage, forwarded e-mail to nearly 6=
,000
ARRL members was curtailed. (ARRL)

**

RADIO LAW: NEW CODES DEVELOPED TO HELP STUDY RADIO RELATED HIGHWAY ACCID=
ENTS

State highway departments will soon get help tracking how many traffic
accidents are caused by drivers chatting on their handheld cell phones or=
C-B
sets, using their pagers or checking their personal digital assistants. =

In
January, every state will receive a booklet of revised codes that describ=
es
causes of vehicle crashes, including distractions from electronic communi=
cation
devices. The codes were developed by traffic safety and crash data expert=
s,
including the Governors Highway Safety Association and the Federal Highwa=
y
Administration. =20

A spokesperson for the Governors Highway Safety Association, says that th=
e
updated crash codes will allow the organization to develop data that
demonstrates whether electronic distractions in cars are a serious safety
problem. A March report by the National Conference of State Legislatures
suggests device-related distractions killed an estimated 600 to 1,000 mot=
orists
in 2001 and could kill 2,000 a year by 2004. (Published news reports)

**

RADIO EDUCATION: HAM RADIO COURSE OFFERED AT PENN STATE

Amateur Radio is a part of the training being offered this fall to freshm=
en at
the Pennsylvania State University. According to Brad Parola, KB3HQE, Vic=
e
President of the Penn State Amateur Radio Club, part of the course during=
the
first half of the Fall semester included exposure to Amateur Radio. Stud=
ents
were shown how to tune radios like the Ten Tec Pegasus, shown how to rece=
ive
PSK 31 signals, and were given a tour of the world famous Rock Springs An=
tenna
Test Range run by Dr. Jim Breakall WA3FET. Early in October, those studen=
ts who
were interested were given the opportunity to take their Technician class
tests. So far 15 students have passed an Amateur service exam. (KB3HQE)

**

**
RESCUE UPDATE: ZL1AMO CONDITION REPORTED UNCHANGED

We have an update in the medical condition of famed D-X'er Ron Wright ,
ZL1AMO. Jim Meachen, ZL2BHF, has the latest:

--
A bit of good news this week. Wrights daughter Terri says the family vis=
ited
Ron in the hospital and he was sitting up in a lazy boy chair. This is t=
he
first time any of the family had seen seen him out of the bed since he wa=
s
hospitalized. Terri Wring says that Ron is also trying to communicate wi=
th
those around him and he looks a lot better than on previous visits. =20

As reported last week, Wright suffered collapsed lungs while visiting Fij=
i. He
was air lifted by an emergency air ambulance to Auckland New Zealand wher=
e he
was initially reported to be in critical condition and on life support. =20

The INDEXA =E2=80=93 the International D-X Association -- has establishe=
d a fund to
assist Wright and his family with the cost of air evacuating him from Fij=
i to
Auckland. Donations go to the ZL1AMO Air Ambulance Fund, in care of Bi=
ll
Jennings, W4UNP, P. O. Box 607, Rock Hill, South Carolina, 29731. Sorry,=
but
INDEXA says that contributions to this fund are not tax deductible.

>From Auckland New Zealand =E2=80=93 down under =E2=80=93 I'm Jim Meachen,=
ZL2BHF, reporting
for the Amateur Radio Newsline
--

Updates on the fund and Wrights condition are being posted to the web at
www.papays.com/opdx.html (ARNewsline(tm), INDEXA, AA7UC)=20

**

THE SCIENCE PAGE: WHALES YES =E2=80=93 NAVY NO

A federal judge has tentatively blocked the Navy from deploying a new ear=
ly
warning system because it might harm whales. Amateur Radio Newsline's Br=
ucce
Tennant, K6PZW, has the rest of the story:

--
A Federal court has said no to a new high-frequency SONAR system designe=

d to
detect enemy submarines at long range because it could further endanger t=
he
worlds whale population. But in making his ruing, the judge also said the=
Navy
may use the sonar during wartime and must be allowed to train with it
beforehand.=20

In partially siding with environmentalists, the judge ordered both sides =
back
to court to begin formulating a plan balancing environmental and military
concerns. Environmental organizations say the Navy's powerful sonar syste=
m can
strand, maim or kill marine mammals. The Navy disagreed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.
--

A few days earlier, a different judge ordered the National Science Founda=
tion
to stop firing high-intensity sonic blasts into the Gulf of California be=
cause
they harm whales. So far there has been no comment from either the Navy =
or the
N-S-F. (Published reports)

**

HAM RADIO IN SPACE: UO-22 IS BACK WITH US =E2=80=93 FOR NOW

G7UPN reports that U-O-SAT 22 is back on line and open for business. At =
least
for the time being.

Chris tells the AMSAT News Service that new software has been loaded to t=
ry and
keep the downlink operating most of the time. But says G7UPN, UO-22 is a=
n
older veteran satellite. This means it may give problems in the near fut=
ure.=20
More information is in cyberspace at www.amsat.org (ANS)

**

INTERNATIONAL =E2=80=93 JAPAN: JA SAYS NO TO PLT

Japan has said no to the introduction of Power Line Transmissions or P-L-=
T in
that nation. Following extensive trials, the Ministry of Public Manageme=
nt,
Home Affairs, Posts and Telecommunications has decided not to permit thei=
r
roll-out for fear of interference to other services.

The Japan Amateur Radio League had been actively working with the gover=
nment,
radio astronomers, broadcasters and others to assess the impact of P-L-T
systems on the radio spectrum. The results of this P-L-T study in Japan =
is a
real eye-opener. It showed conclusively that Power Line Transmission sys=
tem=20
emissions are harmful to High Frequency communications operating in the r=
ange 2
to 30 MHz. Because of this Japan's telecommunications regulators have re=
fused
all requests from P-L-T manufacturers to operate these systems. (JARL, Q=
-News)

**

INTERNATIONAL: GETTING ON THE AIR DOWN UNDER=20

Still in that region of the world, were you aware that New Zealand is one=
of
very few countries in the world where licensed amateurs visiting from ove=
rseas
can immediately operate? =20

Well it is and a visiting amateur can get off an airplane, walk into the
terminal building and start operating on 144 MHz and above by simply sign=
ing
his own call sign portable Zed-L. This, without the hassle of getting a
license and without paying a licence fee.

For more information on operating in New Zealand as a tourist or visitor =
take
your web browser over to www.nzart.org.nz (NZART)

**

ON THE AIR: COMMEMORATING DIANA

Back here in the U-S-A, the first successful moon bounce experiment was
conducted by the Army Signal Corps on January 10th 1946. And to commemor=
ate
the event, the Ocean Monmouth Amateur Radio Club will operate from the hi=
storic
Diana radio site on January 10th 2002. The Ocean Monmouth group plans to
operate using Morse and SSB in the General and Novice Technician sub band=
s of
the 80, 40, 20, 15, 10 meter bands. For more information on the Diana Pr=
oject
and for QSL info please visit the OMARC web site at www.qsl.net/n2mo (OM=
ARC)

**

DX

In D-X, F6COW is reporteed tobe operating from the 9S1X club station in t=
he
Congo. He will reportedly be there until the 9th
of December. (GB2RS)

Also, F6BLQ will participate in the ARRL 10 Meter Contest on the 14th and=
15th
of December, also as 9S1X. His operation will be on SSB only. (GB2RS)

And ST1MN is a new ham in the Sudan. He will be active on all bands unt=
il the
end of June 2003. Q-S-L as directed on the air. (GB2RS)

A lot higher in frequency, FT1ZK, is active on 6 meters every afternoon =
from
Amsterdam Island. The operator is named Caroline and she has a beacon
transmitter active on 50.086 MHz and running 24 hours a day. She will be =
on=20
Amsterdam Island until January 16th. QSL via F5JCB. (VHF Reflector) =20

**

THAT FINAL ITEM: THE CANALS OF VENUS - DEBUNKED
=20
And finally this week lets turn our eyes toward the planet Venus. Just o=
ur
eyes. Not our telescopes. Because if we do use a telescope we might mak=
e the
very same mistake made by a very famous astronomer regarding canals on th=
at
mist shrouded planet. Q-News Graham Kemp, VK4BB, takes us into the cosmo=
s for
this one:

--
Turn of the century astronomer Percival Lowell is well known for promotin=
g the
incorrect notion that water canals had been built on the surface of Mars.=
He
also drew a map of the "canals" on Venus; the only problem was that no o=
ne
else could see anything resembling canals because Venus is always shroude=
d in
clouds.

Turns out that Lowell had narrowed the aperture of his 24" telescope down=
to
about 3" to attenuate the bright light from Venus. That little known fac=
t -
recently publicized - caught the attention of optical experts who realize=
d that
Lowell had unwittingly turned his telescope into a reverse ophthalmoscope=
, an

instrument used to examine the interior of the eye. Instead of mapping t=
he
surface of Venus, Lowell was apparently mapping the shadows of blood vess=
els
and other structures on his own retina!

Sky & Telescope magazine explains the situation in detail, presents Lowel=
l's
sketch of the Venusian "canals," and a photograph of retinal blood vessel=
s.=20
The two patterns are strikingly alike.

>From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio News=
line.
--

You can see the pictures Graham reefers to in the online edition of Sky a=
nd
Telescope magazine. Just take your web browser over to
http//skyandtelescope.com/news/current/article_648_1.asp (Q-News)

Ditto on the Khan system.
We ran it on 1050 CHUM Toronto Canada when AM Stereo first started.
It was more stable and sounded better than CQUAM.
But after CQUAM got the nod in the US, we switched to CQUAM.
Most CHUM Group AM's still run CQUAM Stereo, even though many are talk
now.
I have three AM Stereo receivers, all Sony, including a home receiver,
the stereo walkman and the SRF 100 portable.

> Not with HD on the horizon for first quarter in LA... IBOC/HD and AM stereo
> are incompatible.

Not if the tertiary digital sidebands (+/- 0 to 5 kHz) are not used.
In that case, IBOC and C-Quam AM Stereo -- or even Kahn POWER-side --
can be transmitted simultaneously. But I don't know of anyone who
would want to listen to such a thing. Analog AM -- mono or Stereo --
on its own can sound excellent, and low-bitrate digital can at least
be made to keep its audio degradation to a tolerable level. But try
to put them together, and it's just a mess.

And given the choice, anybody with good ears would prefer hi-fi "AMAX"
AM Stereo over IBOC/"HD Radio", which does offer a wider audio
response, but is so polluted with 'artifacts' and simulated treble
harmonics that it ends up sounding congested, wishy-washy, and
metallic. Here is a side-by-side comparison of the two, with the
actual IBOC audio of 710 WOR compared with that of a local AM Stereo
talk station, as received on a Sony SRF-42:

http://rvcc2.raritanval.edu/ktek9053/hdvsamax.mp3

To my ears, WOR's "HD Radio" digital audio sounds remarkably similar
to a RealAudio webcast at a whopping 20 kbps, as the following example
shows -- it is audio taken directly from WOR's STL, processed to
simulate going through their Optimod, and then encoded to RealAudio:

http://rvcc2.raritanval.edu/ktek9053/wor-hd.rm

My gripe is these orange sodium street lights. Especially the intermittent ones that go on and off all night. They ruin AM reception. They should all be removed and declared illegal.

You may have heard two WorldSpace channels on XM.

But to put it in context, quite a few XM channels are produced "out of house". A number of the hispanic channels are produced by a Hispanic radio outfit in/near Los Angeles. David Edwardo can tell you about them. Some/all of the Urban channels are produced by Radio One. The news channels come from many sources. And there are probably others.

I doubt if you'll find that WorldSpace owns any part of XM at the moment. CC does, and they recently bought the outfit that does those hispanic channels. OTOH, at least a couple of the channels that were produced by CC radio stations have been deleted from XM and replaced by in-house productions. With 100 channels to fill, you'll probably see a number of different arrangements.

Since Sirius carries NPR, are you saying that we should presume that NPR has some ownership in Sirius? I don't think you would.

An orange high pressure sodium light that continually goes on and off all night is at the end of the bulb's life. Not only does the intermittent striking cause RFI, it will eventually ruin the ballast. The power company or municipal authority maintaining the lights is probably unaware that the bulb needs replacing. Try contacting those people.

For sale:

Partial ownership of fulltime AM radio station in N. Miss. 1 KW. On the air since the 1940s of the last century.

Joint venture, group deal, whatever!!!! LOL!

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

City of over 14,000 population. One other AM there of lesser power.

No real estate included. Tower lease would be $250.00 per month.

Total asking price of station is $85,000 cash. A steal!

email: wrecktech@yahoo.com

Tel: (478)741-1710.

The "Radio Crazy" is back at it again!!

From: rtnda@aol.com
Message-ID: <atdpr9$693$1@xuxa.iecc.com>
Source record: 9114

Reposted without permission, but that's the way of the Internet, isn't it?

Subject: You Know You're An Aging Radio DJ When.....

You were first hired by a GM who actually worked in radio before becoming GM.

You excitedly turn the radio up at the sound of "dead air" on the competitor's station.

Sales guys wore Old Spice to cover the smell of liquor.

You were playing Elvis' number-one hits when he was alive.

Engineers could actually fix things without sending them back to the manufacturer.

You worked for only ONE station, and you could name the guy who owned it.

You remember when normal people listened to AM radio, and only "hippies" listened to FM.

Radio stations used to have enough on-air talent to field a softball team every summer.

You're at least 10 years older than the last two GM's who fired you.

You used to smoke in a radio station and nobody cared.

You know the difference between good reel-to-reel tape and cheap reel-to-reel tape.

Religious radio stations were locally owned, run by an old Protestant minister and his wife, never had more than 20 listeners at any given time, and still made money.

You have a white wax pencil, a razor blade, and a spool of 3M splicing tape in your desk drawer - - just in case.

You know people who actually listened to baseball games on the radio.

You can post a record, run down the hall, go to the bathroom, and be back in 2:50 for the segue.

The new guy you're training has never listened to an AM station. He couldn't even name one in his own home town if his life depended on it.

You knew exactly where to put the tone on the end of a carted song.

You spent most of the time on Friday nights giving out the high school football scores. And when they weren't phoned-in, you got really pissed off.

You never thought twice about drinking from the same bottle with another DJ.

You only did "make-goods" if the client complained. Otherwise, who cares?

Somebody would say, "You have a face for radio", and it was still funny.

Sixty percent of your wardrobe has a station logo on it.

You always had a screwdriver in the studio so you could take a fouled-up cart apart at a moment's notice.

Agents were people like James Bond and the Man From Uncle.

The only interaction between you and someone else prior to bedtime is, "Thank you. Please pull ahead to the second window."

Your family thinks you're successful, but you know better.

You played practical jokes on the air without fear of lawsuits.

You've been married at least 3 times, or, never married at all.

You answer your home phone with the station call letters.

You used to fight with the news guy over air-time. After all, what was more important: your joke about your ex-wife, or that tornado warning?

You know at least 3 people in sales who take credit for you keeping your job.

You have several old air-check cassettes in a cardboard box in your closet that you wouldn't dream of letting anyone hear anymore, but, you'll never throw them out or tape over them. Never!

You still have dreams of a song running out and not being able to find the control room door.

You run a phone contest and nobody called, so you made up a name and gave the tickets to your cousin.

Message-ID: <atdpra$6bq$1@xuxa.iecc.com>
Source record: 9115

Hi,

I'm desparately looking for a diagram or a manual for the next
Studer-Digitec audioswitchers:

AS-M 1010 (10x10 mono switching matrix)
AS-M 101 (10 to 1 stereo switching matrix)

Is there someone out there who knows anything more about these? Would
someone be prepared to contact me?
I happen to have this gear, but it's not easy getting it to work without a
manual.
Specifically, the 10x10 switcher is driven with a BCD-encoded protocol.
Impossible to make an interface for this machine without any manual.

thanks a lot,

Soepape

3461. Wanted: Info on IBOC

Newsgroup: rec.radio.broadcasting
Date: 2002-12-16 02:27:15 UTC
From: TEDELM@aol.com
Message-ID: <atjdm3$33d$1@xuxa.iecc.com>
Source record: 9123

Is there an internet source of basic info on IBOC? Nothing seen in local press about it, of course. Thanks in advance.

3462. Re: Why is transmittersrus such jercks

Hmm...I buy transmitters from Continental, BE, or Harris. Never had a
problem. They have always been able to fill the orders on time, and the
products are solid. If you buy in any quantity, they can be quite
flexible when it comes to prices, as well.

Actually, I don't think Randy is the originator of this material. Some of these items were included in a Xerox I have from 1983.
The most recent for was, "You might be a DJ if..." which originally appeared on this very newsgroup in 1996, and much of the stuff in "Any Old DJ's" originated From "you Might Be A DJ If...". In face, Bill Pfeiffer had it posted on Airwaves.com for over a year.
In addition, this material was published 3 years ago in the book "PD Chronicles" by the world-famous mystery PD Jack James (writer of a weekly column on All Access):
Here is the original version....
==========
You MIGHT be a DJ if...

-80% of your wardrobe has a station logo on it.

-You haven't bought Q-tips in over 3 years.

-You still refer to CD's as "records".....

-You look at your paycheck and say, "That's it! I'm getting a real job!"

-An extra hour and a half of sleep is considered a day off!

-The only interaction between you and someone else at dinner time is, "Thank you, please pull to the
second window!"

-You call a weekend off a "VACATION."

-You can smoke a cigarette in three minutes or less.

-You answer your home phone with the station call letters.

-A salesperson has ever taken credit for your paycheck.

-You know what a "bullet" is.

-You've ever sliced your finger with a razor blade, and cleaned out the cut with Isopropyl Alcohol
and an extra long cotton swab (only applies to those of us who remember reels and carts)...

-You measure your amount of production in "shitloads"

-You can post the song...run down the hall...do a full blown "number 2" and be back in 2:40 for the segue.

-Dinner?...let's see what the receptionist has left in the fridge.

-You have ever dreamt of a record running out and not being able to find the control room door.

-You've ever muttered the words, "Yea, I'll try to get that on for ya!"

-You have more stereo and computer equipment than everyone else you know...combined.

-People who ride in your car exclaim, "How in the hell do you listen to the radio that loud!'

-You consider wearing a shirt you have to iron, "dressing up".

-When listening to music at your home, you only listen to the first 30 seconds of the song, then you switch to something else.

-Going to a club and not getting paid seems like a useless waste of time.

-Everyone you know calls you to play their wedding or birthday party.

-People you don't even know start calling you when a good band is coming to town.

-Cheerleading coaches call you wondering how to get that "special mix" of the Jock Jam that they heard on the radio.

-You turn the radio up excitedly at the sound of "dead-air" on the competitor's station.

-You have at least three un-opened CD's, two T-shirts, 22 stickers, and 5 cups in your car.

-You have about 500 un-labeled cassettes, (air-checks) in a cardboard box in your closet.

-Cueing, segueing, walking on, loose, back-timing, raise, lower, EAS, and dumb-ass program director are everyday parts of your vocabulary.

-You have at least 19 pictures of you with famous people that you haven't seen since.

-You know the names and artist to every song your boyfriend or girlfriend can think of.

-You know the words to every song they can think of.

-You know the re-mixes to every song they can think of.

-You've slept quite comfortably on the promotion director's easy chair.

-You were a half hour late for an appearance and blamed it on the directions you got from the sales person.

-You've had 5 #8 callers in a row.

-Your favorite past-time is conferencing three un-knowing listener's on the same line.

3465. Re: Wanted: Info on IBOC

"What is iBiquity Digital? (Seems to a breakthough according to this extract from the website, but I see some disagree which is often the case with new developments - Mike)

In one of the most revolutionary moves since Frank Conrad founded radio broadcasting in a small red-brick garage behind his home in Pittsburgh, Pa., in 1919, iBiquity Digital Corporation (iBiquity Digital) has created the technology that will allow radio broadcasting to enter the 21st century.

With bare wires, crackling spark coils and homemade vacuum tubes, Conrad pioneered an industry that has become the world's primary source of news and entertainment. But much of the sound of radio has remained the same during the years since its invention. iBiquity Digital is taking AM and FM Radio to the next level.

Our breakthrough technology allows digital radio signals to ride the same airwaves as analog AM/FM radio, bringing CD-like sound from any radio station to the listening public and integrating wireless data that will put news and entertainment at your fingertips.

Actually, the call letters for 98.9 and 99.1 are: KEMR and KZMR. Both with spanish formats. KSOL, has moved to 105.7 after buying KARA from empire broadcasting. KSOL is also spanish.

> Has anyone used the Omnia 3 fm? How does it stack with Orban8200,
> 2200, and/or 8400?

I'm not sure specifically what model(s) they use, but Emmis uses Omnia processors on their New York City stations, and these are some of the most distorted, grundgy, and overprocessed FM stations I have ever heard. In the past year, they even cranked up the processing on their "Smooth Jazz" station to the point that a simple piano-bass-drums jazz tune can't get through their audio chain without producing a blatantly obvious amount of distortion -- even on the 3-inch speaker of a typical table radio.

Of course, when carefully tuned in respect to its limitations, almost any processor can be made to provide a good balance between loudness, fidelity, and quality. However, the latest digital processors from Orban and Omnia are rarely used in this manner, at least by commercial stations with mainstream music formats. Instead, these stations purposely take advantage of "brute force" digital clipping that these processors use to achieve absolute maximum LOUDNESS, at the expense of creating this kind of distorted, "grundgy" sound.

So, while Omnia claims their product sounds better than Orban's, and Orban claims their product sounds better than Omnia's, BOTH can be made to sound like RUBBISH if they are used in an inappropriate manner. Hopefully, as more people begin to realize just how BAD the processing on today's radio stations sounds, the "Loudness Wars" might back down to a more reasonable level... but until then, whatever audio processor you use, please use it responsibly!

Not ever.

It didn't require a license to be on the air. It required a license to control the transmitter. Since by 1955 or so, so many stations ran their transmitters by remote control from the studio control room (with the announcer taking the readings), that you are right in the sense that at most operations, particularly small or medium-sized stations, it required a license to get a _job_ on the air if, as part of the job, you ran the transmitter.

I go back to the days when transmitter remote control was unheard of, when only the very smallest stations broadcast from a transmitter site, and when except at the small stations, announcers never touched any equipment. Yes, there really were days like those. And it was also almost unheard of for an air person to use headsets except in quite special circumstances. Can't imagine it right? It happened.

Don

Source record: 9145

We are old indeed.

A "cue scratch" resulted from running the record on the turntable platter to the start of the music, then backing it off a quarter turn or so allowing a fast start when you played the record going by either turning on the turntable motor or releasing your hand from the top of the disc with the turntable spinning underneath. The "backing up" of the needle many times eventually caused a scratch.

When I started, in 1953, our new main console was a Gates and so was the transmitter, carts wern't invented yet so we didn't have any Sparta cart machines nor cheap Sparta consoles. Gates, RCA and Collins were the most common consoles back then. Our tape recorders were Magnecorder Model PT-6's as I recall. All the mikes were RCA-44BX's in the studios (with one cool Western Electric combination ribbon and cardioid--a cool mike, used mosty by Mutual, WOR, and the VOA), with Western Electric and Altec "salt shakers" used for remotes. At that time, there were no solid-state devices of any kind used in broadcasting--nothing but tubes.

This is fun stuff.

I'll jump back in, but only because the questions were posed by yet another "Dave Williams":

Don't know the first;

>From spinning the record back and forth on the turntable, by hand, to find the first part of the audio, and then to back up "just a tad more";

Boards, noteably "The Yard" and lots of other goodies;

Boards, know little about them;

Hang teletype copy paper and tape;

Don't know the last.

How many "Dave Williams" does it take to run a 250 Watt AM station?

B^)

Me, me, me!!

>who can tell me what a "cue scratch" is?

The scratchy sound on a vinyl record made by spinning it backwards to
cue it up.

> What did Gates make?

Transmitters and control boards, plus sold all manner of other audio
gear, some outsourced, under its brand name.

>How about
>Sparta?

Likewise, except it was all cheap junk.

>Why would you find a board with nails sticking out of it in the
>newsroom?

To hang wire copy taken off the teletype machine after it was sorted
into categories.

> What was "Pulse?"

A ratings service.

>God, we're old! ;-)

No s**t, Sherlock. Any further questions?

Mark Howell

You know, I just recently pulled an old Collins console out of service that dated back to the early 60s! It still works but it's time to move on. Anyone remember 6V6's or 12AX7's? It was an odd contrast to have a computer connected to this board!

I hope a "cue scratch" isn't the result of inviting a baseball player to a game of pool.

The transmitter.

>How about Sparta?

The board.

>Why would you find a board with nails sticking out of it in the newsroom?

To post wire copy?

>What was "Pulse?"

I'm either not that old or my station couldn't afford it.

You didn't need it to be on the air, just to operate the transmitter.
The reliability of older transmitters was in question, so they required a license to operate.
In addition, if you worked at an FM with more than 50kw or an AM with a directional array, you needed a first-class license.
Such was the case with me. I wound up going to a school in Tampa that taught you the answers to the FCC exam and I got a first ticket.
I new absolutely nothing about how the transmitters worked, let alone the phasing equipment yet I had an engineer's license.

>can you tell me what a "cue scratch" is? What did Gates make? How about

I know what all of these are except the nails on the board in the newsroom (to hang headphones?)
What's the answer??

3487. OMNIA 3 FM vs. Orban 2200

Newsgroup: rec.radio.broadcasting
Date: 2002-12-22 18:05:13 UTC
From: sl1200 <sl12001210@yahoo.com>
Message-ID: <au4usp$au3$1@xuxa.iecc.com>
Source record: 9143

How does Omnia 3's wideband AGC stack with Optimod 2200's 2 band AGC? One would assume that having constant level control on two bands will outperform (loudness) a unit with a wideband AGC.

Though many say the Omnia 3fm is a LOUD box, is the Oraban 2200 even LOUDER because of the two band agc's???

Budget will only permit these types of products...

Thanks

Let me preface this by saying I don't work in radio at all. But...

Didn't Gates make transmitters or was it reel-to-reel tape decks?

And the board with the nails in the newsroom was to put the copy from the news wire on while it waits to be put into a newscast or just read on the air. When I worked a couple semesters at my college's station (as a diversion from my Education courses), we had a nail for National, State and Local News and nails for Sports, Weather and Entertainment.

Let's see: electronic tape editing, as I remember it, was punching
record at the edit point. A cue scratch was when a cut's start was
scratched from cueing. Gates made almost everything for broadcast
-transmitters, turntables, processing, consoles, etc. Sparta made
cheaper versions of the same thing. The board of nails was to hang
news copy. Pulse was a rating service.

What do I win?

Rich

My first job as a DJ in commercial radio was at a directional AM
station and in those days the F.C.C. required someone in possession of
a first-class license to operate a DA. I didn't have one. So they
paid someone who did to babysit me. He mostly snoozed and
pencil-whipped the required transmitter readings at the end of his
shift. It was a joke. I was perfectly capable of operating all the
equipment. This was unnecessary, even in 1965.

A station I worked at was non-directional during the daytime and switched to a directional night pattern after sunset. Since a 3rd class license was all that was required when the station was operating in non-directional mode, they didn't feel it was necessary to pay the premium that guys with a 1st class license received when the station was on at night. Therefore, despite having a "first phone," I got $3 an hour when the sun was up and $4 an hour only after switching to night pattern. Cheap bastards.

For sale:

The "Radio Crazy" (aka Meyer Gottesman, W6GIV) is
back!

Partial ownership in fulltime AM radio station in
N.E. Miss. Small city of abouu 14,000.

Joint venture. Active or inactive investors with at
least $10,000 each are welcome. All investors would be
on the board with full voting rights if desired.

Total price asked is $85,000. NO real estate.

This station is on the air since the 1940s.

Please call (478)741-1710 in Macon, GA or email:

wrecktech@yahoo.com

73,

Meyer Gottesman, W6GIV

Great to see the original, Jim.

This was brought to my attention when a friend showed me a link to a post
from WNIC's Chris Edmonds on http://www/keener13.com/agingdj.htm

Thanks!

Kevin Sanderson

Mark Howell <geezer@radio411.com> had written:
|
| >How about
| >Sparta?
|
| Likewise, except it was all cheap junk.

I wouldn't say that all of it was. The quality varied widely, even among individual samples of the same product. One station I worked for still is using one of two four-pot mixers (for remotes and such) and has a Sparta 1 kW transmitter as its backup. In 1980, that transmitter was replaced with a Gates MW-1A, which has since been given a sendoff because it was so awful (at the end, it was unable to manage >65% negative modulation).

On the other hand, when the present owner of that station bought it about ten years ago, that owner, a longtime friend of mine who knew about the Sparta cart machine that had been in the newsroom, gave me the pleasure of personally destroying it.

Mark Howell <geezer@radio411.com> had written:

| My first job as a DJ in commercial radio was at a directional AM
| station and in those days the F.C.C. required someone in possession of
| a first-class license to operate a DA. I didn't have one. So they
| paid someone who did to babysit me. He mostly snoozed and
| pencil-whipped the required transmitter readings at the end of his
| shift. It was a joke. I was perfectly capable of operating all the
| equipment. This was unnecessary, even in 1965.

Even as late as 1985, KTRH in Houston (50 kW, DA-2) had
first-licensed ops *at* *the* *transmitter*, pulling 12-hour
shifts. I don't know whether the FCC had rolled back the
first-ticket requirement by then. I think it was sometime around
July or August that the ops were reassigned to duty at the Houston
studios.

When this happened, you would think the backup would have been a
phone line (remember, this was 1985) so at least audio would have
gotten on the air.

No...the backup was two reels of tape of easy-listening music.

This became a major cause of embarassment when a 79-cent capacitor
in an audio processor failed...at 6:30 in the morning. On a
weekday. Drive-time for an all-news station. On that day, instead
of the KTRH news wheel, there was...music. Really, really bad
music.

A couple of people lost their jobs over that one, notable even for
a station whose calls were often referred to as "Keep Those Resumes
Handy".

Didn't know just when to jump in, and my newsreader has killed all the previous messages in this thread, so this is as good a place as any...

Cue Burn, fairly obvious to any of us who ever used a turntable (could have been made by gates, by the way).

Electronic editing, Ok, I'm guessing the questioner means "punching in" with the record button on a specific track at a specific point on a r to r tape.

Razor blades and tape...still have em, although they're very dusty.

Tones on tape, would that be the tertiary or secondary tone?

Anyone old enough to remember the old MAGNECHORD cart machine? If you're an old-timer you may even remember the Magnechord that was 36" tall, 24" wide and played ONE cart. (might be a slight exaggeration, but working from fried memory here).

Gates, of course a broadcast electronic company that made everything from transmitters to turntables. Sparta made some of the same products, only junkier.

Here are a couple of new questions to add to the topic(s).

Do you remember the first time you used or saw...

LIVE ASSIST COMPUTER? (eg "smarts", "Audisk", etc)
SCHEDULING SOFTWARE? (eg "century 21 super scheduler")
COMPUTER GENERATED SPOT LOG? (original 'darts', etc)
CD PLAYER?
MINI-DISC?
DAT?
AUDIO EDITING SOFTWARE? (eg. original version of SAW)
AUDIO STORAGE ON HD? (eg original B.E. AudioVault/Core, Audisk)
FIRST EXPOSURE TO 9 gb Hard Drive? (we could 'never' fill one of those up! haha)

My how times have changed since my first on air gig back in '79.

Rick "DaVoice" Charles
who was 15 when he started, so not old!

They may have had a critical array. These had to have ops on dutuy at least
through the late 70's. Not sure about the 80's.

I remember the Magnecord cart machine, but I never worked at a station with
one.
I had a friend that worked at a station that had one (still in use in 1970)
and I saw it there.
The oldest I personally used were Spotmasters: You slammed the cart into the
machine, cocked the trigger (that raised the pinch-roller into position)
then hit the START button to fire them. We were fortunate that they did
have remote start buttons on the console.
I read this on an earlier post but I will also admit that I, too worked at a
station that had a 3-bay BE cart machine and all 3 decks were wired into the
same pot on the board. If the heads got dirty and missed a cue tone, the
cart cycled in the machine and replayed the spot on the air. Also, when
they returned back to the start and shut off, you could hear it on the air
if a quiet spot/record was playing at the time.
Why do we complain about Audio Vault, Prophet and Enco? I have been on the
air for almost 30 years and today's equipment is easier for the jock, easier
for the engineer and easier for the owner (cheaper than those "hardware"
automation systems).
So why do we refer to those days as the 'good ole' days??

> So why do we refer to those days as the 'good ole' days??

Because we were younger then. Life seemed simpler and we weren't as jaded as we are today. Things weren't as easy then, and in small stations things were sometimes damn near impossible. But we all took pride in our work, and it took some ingenueity to get it to sound good. Working through a stop-set with only one working cart machine and making it sound seamless. Nobody wants to to that, but I have done it, as I suspect others have in this group. The kids today couldn't do that, nor would they be expected to. I worked in the business from 1979 to 1993, and some of my fondest memories are of the little two-bit stations where I started out, where we tried to sound like WLS but with no decent equipment (or talent).

And as the original post in this thread stated, most of us knew the owner. Yes, today's radio station is certainly more efficient and easier to operate, but not everything is better today. Today's corporate outpost stations often do a lame job of things like covering local severe weather, and local radio news where I live is limited to reading a few stories out of the newspaper, or maybe a press release or two. Thank you Cumulus and Clear Channel.

Critical against then-CBL, but not against KRMG or the 1
kW in Texarkana. I believe the first-ticket on-site requirement had
been dropped in 1983 or 1984.

Actually it was only the nighttime pattern that was critical. The
daytime pattern had been changed about 25 years earlier to improve
the signal in "deep east" Texas. That may also have been around the
time the array was moved from Baytown to Dayton (its present
location).

Now the station at 1070 (is it KENR again?)...*that* was a critical
array.

For the money, I would go with the Omnia 3. One station I take care of has the 2200, another the Omnia 3. The Omnia 3 is a much better value and can be made to sound very loud. I would put ot head to head with a 5 band 8200 any day. We had the 2200 before the Omnia 3 came out or both stations would have had it instead. Good luck,

I dropped a manned site for a 4-tower array in '75. The issue was stability
of the array.

A critical array had to be held to tighter parameters (% maximum varience
from licensed values) than some; again, stability in maintaining parametrers
was the issue.

Also called "cue burn." :)

In wonder if this was more because of the heavier tone arms used back
then. Nowadays a good tonearm can track at 1.5-3 grams.

I'm a DX'er with technical interests, including calculating AM patterns.
The old WMEX 1510,
1941 to 1978, operated from North Quincy, MA, at about 42:16:29, 71:01:54
(read from USGS map).
Does anyone know the antenna parameters (ratio, height, phase, spacing &
orientation)?
I belive it was 50kd/5kn and 4 towers.
I hope to graph the pattern & compare with current (many re-incarnations
later, at Waltham site) pattern.
Thanks in advance.

The name, "Spotmaster" brings back less than fond memories of the Gates "Spotmaster 101". It was a real Rube Goldberg device, with a window shade like belt of recording media that was pulled between the feed and takeup rollers past the heads. The heads could be placed in one of 101 positions across the belt for 101 different tracks. (Hence the name.) It had to be rewound noisily between each spot, cueing to the start position with a loud "CLUNK". One more reason I'd hate to go back to "the good old days". :)

Pulse was a ratings service which competed with what is now known as Arbitron. (At the time it was simply, ARB -- American Research Bureau.) I don't know if Pulse was nationwide but I thought it was. I believe the methodology was approximately the same but the numbers would be wildly different from the ARB numbers in the same market. Pulse was around for quite awhile, I think.

>>

It only takes two towers for WNRB to protect WLAC and KGA with 50 kW nights.

The other two of the four present towers are there to protect a non-existent, but "notified" station in Canada.

WNRB (ex-WMEX) protects WLAC to about 75 watts, equivalent and KGA to about 50 watts, equivalent, nights.

WNRB protects the non-existent Canadian station to about 10,000 watts, equivalent, nights.

WMEX is the "historical" occupant of 1510, as is KGA, with respect to WLAC.

WLAC, although it is indeed of higher class than WNRB, is not "historical" with respect to WMEX.

WLAC protects WNRB to about 200 watts, equivalent, and KGA to about 90 watts, equivalent, nights.

KGA protects WLAC, and only WLAC, to about 90 watts, equivalent, nights.

WMEX's night operation in the 50's was indeed 5 kW.

Pulse predated ARB. They had a national service in major markets, and would also do "quick surveys" of markets for one station.

Hooper predated Pulse. I recall Hooper going away in the early 70's, maybe in '72.

Pulse used a door to door (and later, telephone) 24-hour recall method of picking up data.

In September, 1963, ARB announced its first radio market measurement, Detroit, for sometime in 1964. The method was the diary, as we know it today.

Pulse folded in 1978, I believe. The last book to be issued was San Juan, Puerto Rico.

I had one of those; picked it up used in the late 60's for about $100 just
for the heck of it to see how it worked.

Another favorite was the 55 cart vertical elevator in early (60's)
automation gear. For the uninitiated, it had a vertical rear-fed rack for 55
carts, and a vertical, spiral grooved shaft in the front along which a
motorized deck went up and down and picked carts to play. Any cart that
somehow moved foreword (such as with vibration, etc) got sheared off by the
elevator mechanism as the machine operated. A number of times I had to
remove pieces of a shattered cart and scads of tape from the mechanism.

Who remembers the Ampex Cue-mat from the early 60's? Competition for the
tape cart, the Cue-Mat was essentially a 5" floppy disk without the plastic
sleeve. You fed the magnetic disk in, and it cued and played like a cart,
without the moibus loop and all the evils that the loop presented. I first
saw one at KYA in about 60, and I assume it was a prototype as I understand
the device was not put on sale until several years later.

My first job in radio was at a station that did not have cart machines. Instead, they had three Magnacord PT-6 tape decks that had remote start switches at the console. Spots were on reel-to-reel tape.

As I recall these machines were anything but gentle on tape. They could stretch a piece of Mylar tape in an instant, making it nice and round like a piece of spaghetti.

I later jumped out of the frying pan into the fire, taking a job at a place that had a pair of Ampex "Cue Mat" machines. Anyone remember them? They uses a huge "floppy disk" about 12" in diameter, which you stuffed into a slot. The disk turned like a record, and a head read the information. At least it did that sometimes…. When the disks got old and dirty, creased or otherwise deformed, these machines sounded like they were playing under water. It is probably a good thing that these things never became popular.

Sven ...

<<In wonder if this was more because of the heavier tone arms used back then. Nowadays a good tonearm can track at 1.5-3 grams.>>

That was part of it. The other part was the relative crappiness of the vinyl used to manufacture the record. IIRC, Motown and Tamla records were particularly succeptible to cue burn. And RCA made some special ultra lightweight records that often required piling extra coins on the tonearm just to keep it from bouncing off the record.

We had one of those sitting in the back room in the early '80s. By then it didn't work and someone had removed the playback unit from it, so I never saw it work. Looked like a huge 1-column Audiophile (another piece of worthless crap).

After 13 years on XTRA, Coach John Contera is gettin' Clear Channel's uncerimonious boot! His ratings haven't tanked, and he always got quality guests and callers for his evening stints! So what's Clear Channel's criteria? It's sad that in this era of sports shouters, an even keeled voice is once again being silenced ! Mayhap they're clearing a spot for Fox's J.T. the Brick in SoCal's market! Hopefully, Coach will find a spot on Sactown's Hot Talk 1140 ! What a New Years' gift that would be for NorCali ! Thanks once again, coach, for 13 quality years of pro, college, & hi-school sports coverage! Your void will be vast & unfillable! 73s from all your loyal listeners up-n-down Cali & points beyond !!!

Yeah, I remember that Acetate tape would start turning into confetti if you let it whip around for a few seconds after it came of the feed reel. The place I worked was too cheap to by leader tape, so eventually the first cut on the recording would become damaged. You almost needed to wear gloves to stop the take up reel. It was dangerous duty.

... it would appear that the array was four towers, and was asymmetrical, with not all four used in either day or night operation.

The existence of 1510 in New London probably had something to do with that old Boston array.

1510 in New London is now dark, and 1510 in Boston (ex-WMEX) recently went to DA-3, with no protection being required to the Canadian Class B during critical hours.

I may have missed it....but, does anyone remember having to make transmitter readings every 30 minutes, and having to write down the actual times every commercial was aired....and every mistake you made on the log had to be dated and initialed......
One more thing....at sign on, one had to call the ytansmitter and make sure the engineer was there to cut it on....

Yep to all of the above (at WNAH in Nashville). I /think/ the commercial
log documentation was more a matter of individual station policy as
opposed to an FCC mandate.

> One more thing....at sign on, one had to call the transmitter and make
> sure the engineer was there to cut it on....

To give you an idea of how long ago this was, our mod monitor picked up
WVOL/1470 before we signed on...with /the/ Oprah Winfrey doing the
5:55 AM newscast.

When I moved to mornings at WSIX-FM (also in Nashville), I had to call
out to the TV site at 4:45 AM to make sure they didn't forget about our
lil' ol' FM station...and fire it up. :-) This, of course, long predated
Gerry House at WSIX-FM. (In fact, when he arrived, he did PM drive at
the then much more important AM facility).

On an earlier post I made a comment that I used to take transmitte readings
every hour, but in my mind I was sure it was every half-hour.
I stated in 1972 so I don't know if it was station policy or the FCC rules,
but I did take readings every half hour.

Yep.

>
> I hope they get it on the air soon! Seems like they've been having nothing
> but trouble. :D

Mainly from the authorities.
As I understand and this is not official, they have granted a building permit (?) to construct a platform with an antenna off the coast of IO Man. There were objections but I guess that they have been rejected. This implies that the way is open for them to actually build the station and get it on the air.

Amateur Radio Newsline™ Report 1323 – December 20, 2002

Amateur Radio Newsline report number 1323 with a release date of Friday, December 20, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Newfoundland joins the 5 megs experiment and Guam's ham radio community is reported safe following a super typhoon. Find out more on Amateur Radio Newsline report number 1323 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO TECHNOLOGY: NEWFOUNDLAND JOINS 5 MEGS EXPERIMENT

The 5 megs experiment is growing once again. This, as hams in Newfoundland come on board to try their hand at propagation on what may wind up as a future ham radio band. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--
VO1MRC, the Marconi Radio Club of Newfoundland club station, has received experimental authorization to transmit CW and upper sideband on seven spot frequencies around 5.3MHz for three four-day periods.

The next session is from the 20th to 23rd of December inclusive and the frequencies that VO1MRC can use are 5260, 5269, 5280, 5290, 5319, 5329 and 5400kHz. The experiment is to look at the differences in ground wave and sky wave propagation on 3.5, 5.3 and 7mhz.

Jeramy Boot, G4NJH.
--

The original 5 megs experiment began several months ago in the UK. It required British hams to get special temporary authority to use the band. The experiment proved so popular and so many hams applied that British telecommunications regulators had to put further permits on hold until they could reassess the impact to the band. (GB2RS)

**

RESCUE RADIO: SUPER-TYPHOON HITS GUAM - HAMS AFE AND OPERATING

Reports over a popular ham radio website that the territory of Guam was hit by a "Super Typhoon" on Sunday December 8th. And while no stations from Guam have been heard here in the United States, reports over the Internet say that everyone is O-K. We have more in this report:

--
Duncan Campbell, KF6ILA portable KH2 lives on Guam. He says over the QRZ

website that the typhoon packed sustained winds of 160 miles per hour with gusts topping 190 miles per hour.

News reports pick up from there. They say that the storm damaged much of the island's infrastructure including electrical power and knocked out wired and cellular telephone service. And Campbell’s posting adds that along with the loss of electricity and water, the port of Guam was the scene of a major fire that destroyed the reserve tanks of fuel used across the island. The blaze started during the storm and the island is now low on gasoline. He says that the sale of the remaining fuel is restricted to emergency vehicles only.

With the clean up now underway the good news is that all the Amateur radio operators on Guam are believed to be safe. Campbell says that several hams are known to have lost their antenna systems and the islands only repeater was also blown off the air. This, the result of the collapse of a nearby cellular telephone tower striking it as it fell.

KF6ILA says that some hams are already back on the air handling post storm related communications. All operation is on the high frequency bands centered near 14.310, 21.375 and 28.520 MHz. Another frequency -- 7.085 MHz is supposed to be used for emergencies but so far no stations have been heard.

By Sunday December 15th, Andersen Air Force Base and part of hotel row in the town of Tumon had power restored. But news reports say that other parts of Guam could remain blacked out for a fairly long time. And even though its almost two weeks since the storm hit, if you hear ongoing emergency or storm related communications please give it priority over any other use you might have for the frequency.

For the Amateur Radio Newsline, I’m Graham Kemp, VK4BB, of Q-News Australia.

--

A little more information comes from the Guam Pacific Daily News. It says that that the Red Cross and Salvation Army are on Guam providing post typhoon relief. Also, that the Red Cross service center has already processed over 200 requests for disaster assistance.

Meantime, another poster to QRZed says that he arrived in port at Guam on December 14th. N6HPX says that the repeater is back up and operating on 146.91 MHz, but there is nobody on the air using it. (QRZ, Q-News, others)

**

RESCUE RADIO: NEW SALVATION ARMY STATION

Speaking about the Salvation Army, word that it and the Oklahoma City Autopatch Association hosted the grand opening of the Salvation Army Emergency Communication Center. It took place in Oklahoma on Saturday, December 14th. The new center is located at the Salvation Army Citadel on SE 44th Street in Oklahoma City.

Frank McCollum, N5FM, the station trustee, held the first net from the new facility at 9 am. McCollum helped to establish the first station in 1986, at

The Salvation Army's Arkansas Oklahoma and Divisional Headquarters where it remained until two years ago.

The new station features very modern gear. It is designed to allow multiple High Frequency, VHF and UHF stations to provide ongoing communications services at the same time. (WA6LBU)

**

ENFORCEMENT: FCC CLEARS CT TESTING

Turning to enforcement news, the FCC has closed the books on its audit of a Connecticut VE testing session. The good news is that no violations of any rules were uncovered. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “The Enforcement Bureau has informed the ARRL that it has concluded its audit of the Trumbull Connecticut test session of May 10 2001 and found no wrong doing by the VE’s. The Bureau cautioned the ARRL however, that when the number of VE’s exceeds the number of test candidates, control and supervision of a test session is more complicated.”
--

The FCC says that all ten V-E’s did follow proper procedures while administering the exam. It also thanked them for their cooperation in resolving the matter. (FCC, RAIN)

**

SPECTRUM ISSUES: REVISED 6 METER BANDPLAN IN SERA TERRITORY

The South Eastern Repeater Association’s Repeater Journal says that there is a revised 6 meter bandplan in place for repeater operation in states that it oversees. Under the new plan the 15 repeater pairs using 2.51 MHz offset have been eliminated. This is because the outputs of the 2.51 MHz spaced repeater pairs fell on the 20 Kilohertz spaced channels from 53.71 to 53.99 MHz.

The South East Repeater Association says its goal is to simplify the bandplan for 6 meters. The revised plan calls for 15 repeater pairs using 500 kHz offset and 20 kHz spacing with outputs from 51.70 to 52.92 MHz and 39 channel pairs using 1 MHz offsets and 20 kHz spacing outputting between 52.01 to 53.99 MHz. The few repeaters originally coordinated using the 2.51 MHz offset are being grandfathered and allowed to continue operation under the old system.

The South Eastern Repeater Association is one of the nations largest all-volunteer repeater councils. It provides coordination services for repeaters in Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Virginia and West Virginia. (SERA Journal)

**

SPECTRUM ISSUES: ADDITIONAL BANDS FOR UNLICENSED DEVICES

The FCC says that it is seeking comments on the possibility of permitting unlicensed transmitters to operate in additional parts of the electromagnetic spectrum. According to Bob Gonsett’s CGC Communicator, the regulatory agency specifically wants comments on the feasibility of allowing unlicensed devices to operate in the TV broadcast spectrum.

But that’s not all. CGC says that the Commission is also looking for comments on the feasibility of permitting unlicensed devices to operate in other bands and at power levels higher than other unlicensed transmitters. The FCC believes that advances in computer technology make it possible to design equipment that could monitor the spectrum to detect frequencies already in use. This says the FCC would ensure that transmissions only occur on open frequencies. So far, no Amateur Radio service frequencies have been specifically targeted by the proposal.

More on this issue is on the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-229400A1.doc (CGC Communicator)

**

SPECTRUM ISSUES: NEW BANDS FOR EMERGING TECHNOLOGY

Also from the CGC Communicator comes word that the FCC has allocated 90 MHz of spectrum for advanced wireless services. The bands in question are from 1710 to 1755 MHz and from 2110 to 2155 MHz.

The FCC indicates that this spectrum could be used by current cellular and PCS licensees to expand their capacity by offering wireless voice and data services such as 3 G. Or it might be used by others to support the development of entirely new applications that are distinct from existing offerings. Either way, the FCC is seeking comments on licensing, technical, and operational rules.

More is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228237A1.doc (CGC Communicator)

**

NAMES IN THE NEWS: ROCK STAR GIVES MAJOR DONATION TO ARRL BIG PROJECT

Some good news on the ham radio education front. The ARRL Letter says that rock entertainer Joe Walsh, WB6ACU, has made a major contribution to ARRL's Education and Technology Fund.

According to the Leagues Chief Development Officer Mary Hobart, K1MMH, the significant gift through the Joseph F. Walsh Foundation. Hobart says that it will fund an additional eight pilot schools in the ARRL Education and Technology Program.

Walsh is best-known as a guitarist, vocalist and songwriter with The Eagles and The James Gang. He has been an active Amateur Radio operator for more than 37 years, is an avid collector of vintage radio gear and a longtime friend of Heil Sound's Bob Heil, K9EID.

The amount of Walsh's donation was not made public. An up-close and personal profile of WB6ACU appeared in the November issue of C-Q Magazine. (ARRL)

**

NAMES IN THE NEWS: REPEATER COORDINATION PIONEER NAMED NEVADA SM

A ham who helped to pioneer repeater frequency coordination in Southern California has been named as the new ARRL Nevada Section Manager. Amateur Radio Newsline has a look at Dick Flanagan, W6OLD.

--
Dick Flanagan, W6OLD, is replacing Jan Welsh, NK7N as Nevada Section Manager. According to an ARRL release, Flanagan, a resident of Minden Nevada was the recipient of the ARRL 2000 Excellence in Recruiting Award and was active in the successful effort to secure an Amateur Radio antenna bill in Nevada. But long before that -- back in the early 1970's, W6OLD started his ham radio political career while still a resident of Los Angeles California.

It was in 1971 that W6OLD helped to create the famed Southern California Repeater Association or SCRA. He also served several terms of office with that group. And it was during his tenure that SCRA pioneered many innovations in the area of repeater coordination and dealing with the FCC on repeater related issues. And under Flanagan's leadership the SCRA worked out a frequency sharing scheme with Baja California Mexico that still remains in force -- essentially as negotiated -- more than two decades later.

Since moving to Nevada W6OLD has held a number of positions in the ARRL Field Organization. This includes ARRL Official Observer, Official Emergency Station and ARRL VEC volunteer examiner. Most recently he has also been serving as an assistant Section Manager.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL says that Welsh is stepping down at the end of the year for personal reasons. (ARRL, SCRA Archives)

THE ARNEWSLINE SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, the administrator of the Amateur Radio Newsline support fund, Andy Jarema, N6TCQ:

--
With the holiday season upon us, I need to ask you to add one more name to your gift list. Of course I'm referring to Amateur Radio Newsline.

Without going into a bunch of numbers that will bore you, let's just say that we will end the year with a deficit and it will grow in months to come. That is unless you, the Amateur Radio Newsline listener step up to help.

What we need is immediate support so we can pay the back bills and ongoing support to prevent any back bills. And only you can make it so.

Remember, Amateur Radio Newsline is a federal 501 (C)(3) not for profit orporation and donations to it are tax deductable. This is an excellent way to do some end-of-year "window dressing" on your personal or club's taxable income.

The address is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California. The zipcode is 91066.

If you missed that address don't worry. It will be repeated in the close of this weeks report.

Andy Jarema, N6TCQ

--

Thanks Andy. (ARNewsline Support Fund)

**

EMERGING TECHNOLOGY: BOSTON TV STATION DISRUPTS POLICE SYSTEM

A Boston-area TV station's new 24-hour-a-day digital transmitter is disrupting Camden County New Jersey police communications over 100 miles away. Amateur Radio Newsline's Ken Locke, N8PJN, fills us in:
--
The South Jersey Courier-Post newspaper says that twice last summer, the new digital transmitter used by WCVB in Boston Massachusettes interfered with field communications to Camden County's communications headquarters in the town of Lindenwold. The town's leaders want the problem to go away.

By way of background, WCVB began broadcasting its Federally mandated digital television signal on Channel 20 in 1998. But the problem in the currently shared 506 through 512 megahertz band did not show up in Southern New Jersey until this year. In January WCVB began full time, round-the-clock digital programming. A summertime conditon hams call tropospheric ducting is being tabed as the cause of the interference.

A duct acts kind of like an R-F tunnel from one geographic area to another. This one is putting South Jersey in Boston's back yard and vice versa during the warmer months of the year.

Engineers seem to agree that the police or the television station will have to move frequency. The big question is which one will make the change. New Jersey Congressman Rob Andrews met with county representatives and is now working to arrange a meeting between them and the FCC in Washington. They want the station to move.

But some consultants and communications lawyers feel it will be the county thats told to change frequency. They say that broadcasting is mandated the spectrum on a primay basis.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.
--

The bottom line. This one looks as if it could become a political football for the FCC. (South Jersey Courier-Post , Portland SBE, KB4KCH, others)
**

HAM RADIO IN SPACE: SPACE STATION ACTION PLAN APPROVED

The leaders of the five space agencies that are partners in the International Space Station have approved a new operating plan for the orbital outpost. Meeting in Tokyo Japan, the group has approved. Among the more important items to Amateur Radio is increasing the number of permanent crew members so that research projects can proceed more swiftly. More people on-board the ISS means an increased chance or QSO's.

Right now, with limited crew resources of three Astronauts research takes a back seat to construction aimed at completing the orbital station. By 2006 that number is expected to at least double if a method of emergency evacuation can first be worked out. The current escape vehicle which is mandatory to ISS crew deployment can carry only three. (Adapted from published news reports)

**
INTERNATIONAL - CANADA: ONTARIO SM RE-ELECTED

On the International scene, Radio Amateurs of Canada reports that Robert McKenzie, V-E-3-S-J-Q has been re-elected Section Manage of the Canadian Province of Ontario. His next two-year term begins on March 1st.. McKenzie ran unopposed eliminating the need for a balloted election. (RAC)

**

INTERNATIONAL-CANADA: LICENSING RECORD UPDATE

Records maintained by Industry Canada and Radio Amateurs of Canada show that the Canadian callsign database is becoming corrupted by inaccurate information. Radio Amateurs of Canada says that one of the prime reasons for this is the failure of some Canadian Radio Amateurs to advise the licensing authority of address changes.

The rules in Canada that the holder of an Amateur Radio Operator Certificate shall notify the Department within thirty days with respect to a change of mailing address. Unfortunately, this does not appear to be happening in all cases. (RAC)

**

INTERNATIONAL - SOUTH KOREA: INVESTING IN THE WWW

South Korean telephone companies plan to invest the equivalent of $10.9 billion in U-S dollars in broadband networks by 2005. This, as a growing number of people in that nation demand access to high-speed Internet services.

In making the announcement South Korea's Ministry of Information and Communication did not provide breakdowns of the investment plans. It did note that South Korea boasts having the world's highest Internet penetration with more than one fifth of the population having access to high-speed Internet services. (News release)

**

HAM TESTING - SOUTH AFRICA: ZS EXAM SUCCESS

And talk about high exam scores. The South African Radio League has announced that during the October 2002 Radio Amateur Examinations that four candidates achieved the first place in the test. SARL says that each of these applicants emerged with an average of 99% in the overall exam. (SARL)

**

INTERNATIONAL – UK: FOUNDATION LICENSE PARTY

The United Kingdom plans to celebrate the first year of its new Foundation Class license with a big on-the-air QSO Party. The Foundation License for 'QSO Party' for M-3 prefix licensees and their friends on the 1st of January 2003 from 10:00 and 15:00UTC. Operations will be on 40 meters around 7.070 MHz, plus or minus any QRM. (RSGB)

**

DX

In DX, word of a new station on from the Sudan. His name is Marco. His call sign is ST1MN, and he is reportedly will be active on all of the High Frequency bands through the end of June 2003. (RSGB)

Also, VK8AN will be active as 4W6AN from Dili, East Timor. This, from around the 19th of December through the end of the year. Due to limited notice he will only be running about 15 watts to a dipole or groundplane antenna. QSL only via VK4AAR. (Via e-mail)

**

THAT FINAL ITEM: THAT FINAL ITEM: STAR TREK -- HERE WE COME

And finally this week a story about the ultimate form of communication. About sending yourself electronically to anyplace you might want to go. Bill Pasternak, WA6ITF, has the far out story of science fiction on its way to becoming science fact:

--
As incredible as it may seem, a Star Trek like transporter may be a step closer to reality. This, after physicists in Denmark make two samples of trillions of atoms interact at some distance.

The experiment involved a science called quantum entanglement. This is a mysterious theory of a controlled spiraling of two or more particles without any physical contact. Scientists say that these entangled states are needed for quantum computing and for teleportation.

Before the team at the University of Aarhus made its breakthrough other scientists had successfully developed entangled states of a few atoms. But the scientists in Denmark have now done it with very large numbers.

At the moment nobody is about to teleport anyone, anywhere. But the research, which was reported in the science magazine Nature makes the idea of instantly transporting an object from one place to another less far fetched.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.
--

We know you are waiting for the obvious tag line, so we won’t disappoint you. If all goes well, maybe the term “Beam me up - Scotty” will be reality in our great, great, great grandchildrens lifetime. The only question is whether or not a 5 word per minute code test will be required to “communicate” using that rather exotic mode. (Future Technology)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Yes. The logs were the size of a tabloid newspaper. Exact times were
intitally required. Later, if the spot ran as scheduled, only a check
mark was required.

>One more thing....at sign on, one had to call the transmitter and make sure the
>engineer was there to cut it on....

The smaller stations I worked for had the transmitter at the studio,
so I controlled the transmitter with a 3rd class restricted license.
When I graduated to 50kw directionals (XTRA, WOR) engineers were on
duty. Only during the past 5 years or so were transmitter engineers
eliminated and WOR became totally remote controlled. Since XTRA is in
Baja California, Mexico, I suspect the Mexican rules still require
engineers.

Rich

Yep. And how to encode the song data on the cue track so your air
wouldn't sound like someone was downloading x-rated pics from the
local 300 buad BBS.

>You always had a screwdriver in the studio so you could take a fouled-up
>cart apart at a moment's notice.

Yep. Or, the machine itself in some of the smaller stations.

>You have several old air-check cassettes in a cardboard box in your closet
>that you wouldn't dream of letting anyone hear anymore, but, you'll never throw
>them out or tape over them. Never!

LOL.

Actually, I have them on reels. Around half of them were cut at 15
IPS.

>
>You still have dreams of a song running out and not being able to find the
>control room door.

Nah. My biggest nightmare is finding out the other turntable motor is
burned out, just as the first song ends.

>
>You run a phone contest and nobody called, so you made up a name and gave
>the tickets to your cousin.

Never had that problem. However, after moving from one station to
another, I once did a contest and gave out the phone number of the
station I'd been working at the day before.

Just curious, but I was wondering if any stations have started digital broadcasting yet. (beyond just testing)

You mean IBOC?

KROQ in Los Angeles, and the Susquehanna country station in Cincinnati are
24/7, and WOR in NY is running daytime AM.

Had two of them in Hawkinsville Georgia. One held the currents and the other held the recurrents and oldies. Gates Carosels held the spots. I had a 55 almost take my index finger off. The elevators would occasionally stick. I was in a hurry and grabbed the pully and gave it a twist. My finger was caught between the belt and pulley. It was over in a second, but I still have the scar. From then on, I used my shoe to nudge the motor pully when it stuck.

SRS news gone????

Sad but also great news.
as we know SRS news will end his loggings service. al other services will stay, only that one will end due the huge amount of work that brings it with it.
But!! There fore Jonny at SRS did put an other service on line.
It is Similar to the Free Radio Network (www.frn.net) but than more aimed at the European Public, but of course everyone is welcome.

At the end of week 1 of the year 2003 the normal URL of srs will bring you to that forum
(http://www.srs.pp.se) but till then you might want to use this one
http://www.srs.pp.se/cgi-bin/teemz/teemz.cgi

This his it's sister page so to speak. : www.frn.net
For both go's, you first have to register to become an member.

Greetings and a happy trail in 2003
Alfred the moderator

And are you already a member?

very few PD's had the authority.

> You excitedly turn the radio up at the sound of "dead air" on the
> competitor's station.

still do.

> Sales guys wore Old Spice to cover the smell of liquor.

still do.

> You were playing Elvis' number-one hits when he was alive.

and you can still name them.. suspicious minds.

> Engineers could actually fix things without sending them back to the
> manufacturer.

when they could find it on their bench with parts all over from other pieces
they were working on for that last minute broken marti

> You worked for only ONE station, and you could name the guy who owned it.

or her.

> You remember when normal people listened to AM radio, and only "hippies"
> listened to FM.

don't they still do that?

> Radio stations used to have enough on-air talent to field a softball
> team every summer.

and proved it by having a softball team that was 1-10 (we broke better
records on the radio)

> You're at least 10 years older than the last two GM's who fired you.

I left before that happened.

> You used to smoke in a radio station and nobody cared.

smoke what?

> You know the difference between good reel-to-reel tape and cheap
> reel-to-reel tape.

you could see the parts of missing oxide on the tape.

> Religious radio stations were locally owned, run by an old Protestant
> minister and his wife, never had more than 20 listeners at any given time,
> and still made money.

UPDATE! They are now retired in Hawaii.

> You have a white wax pencil, a razor blade, and a spool of 3M splicing
tape
> in your desk drawer - - just in case.

Doesn't everybody?

> You know people who actually listened to baseball games on the radio.

still do - no TV anymore. The pendelum has swung back the other way.

> You can post a record, run down the hall, go to the bathroom, and be back
in
> 2:50 for the segue.

nobody even jocks a show anymore so you can go home in 45minutes, now.
> The new guy you're training has never listened to an AM station. He
> couldn't even name one in his own home town if his life depended on it.

The COL has changed to the bigger town.

> You knew exactly where to put the tone on the end of a carted song.

now, a cart is something you find with a homeless guy.

> You spent most of the time on Friday nights giving out the high school
> football scores. And when they weren't phoned-in, you got really pissed
off.

now you can make them up.

> You never thought twice about drinking from the same bottle with another
DJ.

only if she was a her.

> You only did "make-goods" if the client complained. Otherwise, who cares?

The client even listened to the station.

> Somebody would say, "You have a face for radio", and it was still funny.

It still is - it's one of those things, like the secret handshake.

> Sixty percent of your wardrobe has a station logo on it.

a VERY low number. I still have a pillow with the logo on it.

> You always had a screwdriver in the studio so you could take a fouled-up
> cart apart at a moment's notice.

that could be considered a weapon, now.

> Agents were people like James Bond and the Man From Uncle.

....and they are, again.

> The only interaction between you and someone else prior to bedtime
> is, "Thank you. Please pull ahead to the second window."

I dated her for that.

> Your family thinks you're successful, but you know better.

Nope, they kept wanting me to get a REAL job.

> You played practical jokes on the air without fear of lawsuits.

gee, I wonder what happened with that one?

> You've been married at least 3 times, or, never married at all.

There are very few Real Radio chicks.

> You answer your home phone with the station call letters.

now, it's just in the dreams.

The nightmare was having the song end and you knew you were sleeping but
couldn't do anything about it.

> You used to fight with the news guy over air-time. After all, what was
> more important: your joke about your ex-wife, or that tornado warning?

no contest, the joke! Tornado's already happened by the time the news guy
told you about it - if you HAD one.

> You know at least 3 people in sales who take credit for you keeping your
job.

No, the blame. underneath they were good guys.

> You have several old air-check cassettes in a cardboard box in your closet
> that you wouldn't dream of letting anyone hear anymore, but, you'll never
throw
> them out or tape over them. Never!

How many cardboard boxes, do you still have?

> You still have dreams of a song running out and not being able to find the
> control room door.

sometimes it still happens.

> You run a phone contest and nobody called, so you made up a name and gave
> the tickets to your cousin.

or the girl at the dirve-up :-)

I believe they were useful in the ship/shore service. Some of the study guides I had were geared toward that.

I first took 1, 2 & 9 back in '74 and flunked 9. Went back, passed 3 and 4 and came out with a First in '75.

Yeah, I guess I'm an old DJ having first come on the air at a fairly large network station on Saturday, April 10, 1953--fifty years ago this spring. DJ was probably not the term used in those days to describe my job. "Announcer" was the term. We didn't touch the equipment. The control room operator did all that stuff.

Logging? At my first station the program log was typed in the traffic department and, as the programming unfolded, the originally log was transcribed _by hand_, all of it, into a blank "actual log" or "as performed" log. Every second had to be accounted for--no erasures, corrections made by drawing a single line through the error, writing in the corrected info and initialing the change. It was one hell of a lot of writing that the operator had to do. But why not?

Except for station breaks (always 30 seconds) and about five hours of localy originated programs per day, everything came from the network. For example, a 7PM to Midnight announce shift might consist of no more than ten, thirty-second-long station breaks. Keep in mind, it took _three_ guys to pull this off:: the announcer, the operator, and the transmitter engineer--none of us working hard. Transmitter remote control hadn't been invented yet. It came in about 1955, if I recall, no solid state stuff, used of lots of stepping relays and so on. In fact, no transistors were used in _any_ broadcast equipment in 1953 (when I started).

Microwave from studio to transmitter was unheard of. The program got from studio to transmitter via Class A equalized telco lines (5 kHz lines) or Class AAA lines (not used much) which were good to 15kHz). The networks also used telco lines for program distribution. CBS, NBC, ABC pretty much used the Class A lines to all affiliates. Mutual used the Class A only to the biggest cities--Class C 3500 KhZ lines were pretty universal with Mutual which is why the network usually had a pretty poor sound (although they _did_ use very cool and very good Western Electric microphones at their main studios at 1440 Broadway)..

In mid-50's I worked as a master control operator for three straight summers at ABC in New York City at 7 West 66th Street in a bulding that was once used as a stable (ABC has moved there from Rockefeller Center where it was once the "Blue" network of NBC and later independent of NBC as "The Blue Network" and still later The American Broadcasting Company.

Operating in master control was interesting. Two operators were on duty at all times. We had no sight lines at all to the studio control rooms which, in turn, _could_ see what was going on in the studios (and there were _many_ studios and control rooms. Coordination between master control and the many live studios and studio control centers was done via an elaborate system of switches, relays and lights. There was a formal operating manual covering

all of this activity. It's a long one.

WABC (formerly WJZ) was part of our responsibilities. Someone earlier mentioned checking from the studio to see if the transmitter guy had shown up. Well, we did that and also did an audio check. Believe it our not, WABC was _not_ on all night in those days, certainly not on the Sunday/Monday overnight (Monday mornings were the only early mornings I worked). Anyway, I remember calling "Hello Lodi, Hello Lodi, Hello Lodi" down the line so the transmitter line could be pronounced "checked and OK" and the right level set with a tone after we said the "Hello Lodi" stuff. The WABC transmitter was (is) located at Lodi, New Jersey.

The programs: Almost all day long, soap operas with real live actors, organists, sound effects etc--some titles: My True Story, When a Girl Marries, Whispering Streets and others. The big-deal stuff was at night--The Voice of Firestone, Ozzie and Harriet, some detective dramas and so on. Newscasters and announcers: Martin Agronsky, Don Gardiner, George Ansbro, Milton Cross, Taylor Grant, Alex Drier and Paul Harvey from Chicago, The Breakfast Club (also from Chicago). I've forgotten a lot of the names. Great days, but the system was falling apart by 1957--TV was killing the full-service radio networks. Somewhere in there, ABC hired Martin Block from WNEW, and he put his "Make Believe Ballroom" show on the whole ABC network. It didn't last long and neither, after that, did ABC as an 18-hours-on-air-per-day full service radio network.

It was fun. Hope the above interested some of you.

> and came out with a First in '75.

I flunked Element 9 in Chicago in 1971... took it again Chicago in 1972 and got my first ticket in St Petersburg, FL in 1974.
As I stated earlier.. I went to a quickie school that taught the answers to the FCC exam. There I was in 1974 with a first ticket and I hardly knew what a resistor was, but I had to have it to take transmitter reading from a 3 tower directional array. I later worked at a 100,000 watt FM which also required a first ticket.
I sure have been enjoying reading the posts in this thread... I really appreciated Don Forsling's account. That was really before my time but I know a lot about the history he discusses. Recently I have been reading much about the history of NBC's Monitor, which I listened to frequently on WLW as a kid growing up... It really wasn't my thing but my mother loved it. If anyone else here has an interest in Monitor, here's a pretty neat tribute site: http://www.monitorbeacon.com/.

My first comercial job was for what was then WEAW-FM in Evanston, Illinois. My shift (graveyard) was either religious tapes or foreign language. One night, I put "the Polish Hour" on backwards, and needless to say, didn't notice.

The next day, I was called in, reamed out, and was only saved from getting canned when the Chief Engineer couldn't tell the difference between forward and backwards when the shop steward challenged him.

The next week, at the top of the tape, I was able to cue it up right after the host of the show said, approximately

"Meester Hengineeer, this iiiis start ooof show, and iiiis going right way."

Thanks for that wonderful reminiscence, Don.

That's about the time I first got interested in radio. But I was young enough to have missed all of that. Still love hearing about it.

I am coming up on 32 years as morning local guy on KQED-FM. We have the largest audience in public radio and sometimes top the local chart during AM drive.

All I get to do anymore is read funding credits and weather forecasts and introduce traffic reports during Morning Edition but, for the moment it is still local and live, and I still get a kick out of it.

After getting settled in with the Navy ship to which I was assigned in San Diego in the summer of 1975, I spoke with one of the DJ's at B-100 at the time about the licensing for broadcast radio and how I would go about getting it. He recommended Kaufman's Q & A to study for the test. The book allowed me to take and pass not only Element 1, 2, & 9, but I decided to take Element 8 for the Radar Endorsement, also, since I was still new and was supposed to be working with the radar on board ship.

I was going to go back for Element 3 but because of ship's movement and schedule, I never made it.

To take the test in 1975, the FCC testing office in San Diego was downtown - an easy 2 block walk from where the bus let you off.

But after I returned to New Jersey in 1979, I had to go into Manhattan to Varrick Street for the exam for license renewal. The building was an abandoned warehouse not too far from the WTC. However, by the time I found the office, I had walked from Penn Station to the FCC office, I was exhausted and it was January 1980. I missed passing Element 3 by one question. They didn't even have Element 8 by that time.

To make myself feel better after failing, I went "antenna chasing" to the Empire State Building and from out the window of the 102nd floor I met "Alford". "Alford" gave me an inspiration, and I vowed to take that test the next time and pass it.

In 1985, I applied for renewal, and it came back without Element 9. The FCC started handing out "boxtops" - what an insult!

Since then, they shuffled the tests and licensing around so bad between broadcast and Amateur, I just got to the point that it just wasn't worth it, after all.

But I still like "Alford" and watch it regularly on www.esbnyc.com from the comfort of my home in Florida.

Nope, but it was heads out.

Luckily it was still in Production (room) at the time. It didn't air like
that.
I was lucky, I learned early on to assume a tape was tails out - but to
check before I got too far into the tape.

Suspect that was really in Tampa. The office was either downtown or Westshore Blvd... (I took it downtown in the federal bulding in 1967 - passed on the second try as well... Didn't go to the memorizing school, however..) -- Seems to me that Angelo Ditty was the chief of that FCC office around that time.. At least was up until the 80's when he got shuffled to Atlanta.

Which 3 tower directional was that? Up in Clearwater? Or one of the Tampa stations? Most of the older stations there were 2 tower directionals like WSUN or non directionals. At that time WFLA still had studio engineers in their TV station making the readings. So it wasn't them. Just sort of curious which stations you landed at.....
